Debbie,

If the filters are replaced each month or so, they would not be capital items but would fall under O&M. O&M expenditures are explicitly not permitted to be funded under the DWSRF for public water systems under either the loan fund or set asides by statute.

Joanne – is there any other angle on this question? Am I missing something?

Hi Chuck – Thanks for the response. However, what I'm asking about is the smaller, Brita-type filters that attach at the faucet. They might cost about $50 or so. That type of filer would not be a capital item, would not have a service life of several years, and would not add value to a home. What about those?

Thanks.

Debbie

Debbie,

Thank you for your email regarding Flint, Michigan.

We have determined in the past that a water system can take a loan to fund home treatment units. Likewise, a water system can use a loan to replace lead service lines - even privately-owned. Set asides must not be used for what the loan fund was set up to do. The state could decide to forgive the principal for the home units or the lead service line replacement.

A home treatment unit is a capital item with a service life of several years and it adds value to the home.

If you would like to discuss this further, we can do so.

Any filter that removes a contaminant, whether it is point-of-use (faucet) or point-of-entry into the home, is considered treatment—even it's a $50 faucet filter vs. a point-of-entry filtration device for the entire house. Thus, the purchase of any type of treatment (capital expense) should be DWSRF loan eligible.

Hi Jen,

The Flint Water Study website (http://flintwaterstudy.org/2015/09/lead-in-drinking-water-health-risks-to-flint-residents/) includes a table with links to home water filters certified (NSF standard) to remove lead. It does not include Brita pitcher filters, but it does include pitcher/pour over filters from other companies. There are also faucet-mount filters listed.

Let me know if you need more on this.

Andrea— Susan is asking STPB if the lead filters (capital expense) are DWSRF loan eligible, which they are. Now the question has gone to OGC as to whether the replacement filters are DWSRF-eligible; are they O&M—which I think they are, then they are not DWSRF eligible. Not sure if any replacement filter would not be considered O&M, even if it was a 12-month filter. Do you know what type of lead filters are being purchased currently for Flint citizens? I know the Brita pitcher filters don't remove lead; I think they're purchasing filters that attach to the home faucet, right?

Public health emergency declared due to lead in Flint water

By The Associated Press | Posted Oct 1st, 2015 @ 1:01pm

FLINT, Mich. (AP) — Genesee County commissioners have declared a public health emergency for residents using water from the Flint River through the city's water system.

Tests have shown children with elevated levels of lead, months after Flint began drawing and treating water from the river. The water is aggravating lead in old pipes in thousands of homes.

Commissioners issued an advisory Thursday recommending that people not drink the water unless tests show lead levels are down or the water has gone through an approved filter.

The General Motors Foundation, the local United Way and others have given at least $105,000 to buy filters.

Gov. Rick Snyder has pledged to announce some type of action by the end of the week. He says the consequences of using the river weren't "fully understood."

---

http://www.freep.com/story/news/2015/10/01/legislators-take-action-fix-flint-water-supply/73152540/

Legislators take action to fix Flint water supply

By Kathleen Gray, Detroit Free Press Lansing Bureau 2:31 p.m. EDT October 1, 2015

LANSING The Michigan Legislature is beginning to take notice of the ongoing controversy surrounding Flint’s water system, which has been plagued since the city disconnected from the Detroit water system and began pulling its water supply from the Flint River.

The state Senate approved a supplemental appropriations bill that included a $100 placeholder while the state looks for a solution to the water issue.

“We want to make sure we have an accurate number. We didn’t want to put too much in or not enough,” said state Sen. Jim Ananich, D-Flint. “We want to get an accurate understanding of what it’s going to cost to get us the help that we need.”

The appropriation comes on the heels of Gov. Rick Snyder telling reporters on Wednesday that he’ll have some more answers on the state’s role in fixing Flint’s water problems by the end of the week.

An anonymous benefactor and the state have begun distributing water filters to Flint residents in recent weeks after a Hurley Medical Center researcher found lead levels increasing in Flint.

“We’ve been actively working that issue for a significant period of time and providing additional resources recently,” Snyder said. “I would expect us to have more to talk about that by the end of of the week and how we’re partnering with Flint and the federal government on this.”

In 2014, city officials ended the city's contract with the Detroit Water and Sewerage Department, saying that water costs were too high. They opted instead to pull from the Karegnondi Water Authority, which is building a system to supply Genesee County with water pulled from Lake Huron. In the long run, this will mean lower water costs, officials have said, adding that water from the Detroit system will cost $1.5 million more a month than the city is paying now.

But until the new system comes online in 2016, Flint is temporarily pulling water from the Flint River. Since it made the switch, residents have complained that the water smells, is discolored and makes them sick.

And the Hurley researcher recently found that the number of Flint children with elevated blood-lead levels — 5 micrograms per deciliter or more — jumped from 2.1% in the 20 months prior to Sept. 15, 2013, to 4.0% between Jan. 1 and Sept. 15 this year. In certain ZIP codes, the change was even more troubling, she said — jumping from 2.5% of the children tested to 6.3%.

Ananich said filters need to be made available to affected residents, especially vulnerable citizens like children and senior citizens, and the corrosion in the water system pipes needs to be addressed.

“And I think we need to move to a new water source, potentially going back to Detroit,” he said. “Filters can do a lot of good, corrosion control can do some good. But a new water source has to happen and it has to happen soon.”

In addition to the money for Flint water issue, the appropriations bill approved by the Senate also included a $7.7-million settlement of a lawsuit filed by a Flint woman whose car was hit by a Michigan State Police trooper, who was pursuing a driver who refused to stop for a seat belt violation.

The woman and her daughter were injured in the July 3, 2014, crash and another passenger Jacqueline Nichols, 64, of Flint, was killed. Trooper Timothy Fagin received undisclosed discipline after the crash and remains a state trooper.

Flint data on lead water lines stored on 45,000 index cards

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 01, 2015 at 12:18 PM

FLINT, MI -- The city knows which homes in Flint have pipes most likely to leach lead into tap water, but can't easily access the information because it's kept on about 45,000 index cards.

Department of Public Works Director Howard Croft said his office is trying to convert data from the cards, including whether homes have lead service lines, to an electronic spreadsheet program so that homes with the highest risk of lead in water can be easily identified.

The effort could be critical to the distribution of 5,250 lead-clearing water filters being funded by the United Way, General Motors and others.

A United Way news release today, Oct. 1, says filters will be distributed "to the highest-risk populations first to ensure the safety of the community."

Testing by Virginia Tech university and a study by the director of Hurley Medical Center's pediatric residency program have warned of a serious problem with lead in Flint's drinking water.

Croft said Wednesday, Sept. 30, that he "can't put a number on" how long it will take the city to convert its paper records into electronic data or maps that can be used to pinpoint lead hotspots. "It's on our to-do list."

Work on computerizing information on the index cards has started, but about 75 percent of the work remains, the DPW director told the City Council Wednesday.

Although the city's water is lead-free when it leaves Flint's water treatment plant, lead service lines that feed about half of homes and businesses in the city have the potential to leach lead as the water flows through the pipes.

Experiments by Virginia Tech university show Flint's treated water -- drawn from the Flint River -- is about 19 times more corrosive than Lake Huron water that had been purchased from the city of Detroit for decades, making the problem much worse than in the past.

Flint changed its drinking water source from Lake Huron to Flint River in April 2014, a decision that came as the city was being run by a state-appointed emergency manager.

Although Flint Mayor Dayne Walling has said the city will complete plans for making the river water less corrosive by the end of the year, there is no treatment for corrosion -- such as the addition of phosphates -- currently.

Gov. Rick Snyder said this week that the state is preparing to announce its plans for assisting the city with the lead in water problem.

After months of assurances by the DEQ that Flint water met all requirements of the Safe Drinking Water Act, Snyder said Wednesday, Sept. 30, that "it appears that lead levels could be higher or could be increased.".

While the governor said the decision to run Flint River water through the city's aging water distribution system, including lead service lines to homes, was made "with the community," Walling has said he had no involvement in the decision and privately questioned it.

Croft has said about half of Flint's homes have lead service lines and quickly identifying where they are located could be critical for water filter distribution or any program that involves the removal and replacement of lead pipes.

Walling asked Snyder in a Sept. 14 letter for $10 million for what he called a "healthy homes initiative" aimed at replacing lead service lines in "the most vulnerable households."

Croft said he's been in contact with the University of Michigan-Flint and Kettering University, asking if students might be available to help city employees with the task of computerizing data about lead pipes from the index cards.

City Councilwoman Vicki VanBuren said she was surprised that the city's information on lead service lines isn't an a format that's already easily accessible.

"I had asked if we could get a map," VanBuren said. "When I requested that information ... (Croft) responded, 'OK, no problem.' So I was surprised when there was nothing to see.

"That seems like basic information they should already be working with," she said.

More than 5,000 in Flint to get lead water filters following donation

By Dominic Adams | dadams5@mlive.com The Flint Journal Follow on Twitter on October 01, 2015 at 11:35 AM, updated October 01, 2015 at 12:04 PM

FLINT, MI – More than 5,000 Flint residents will be able to get water filters following an influx of $105,000 from private and public sources.

The filters come as the city and county have issued lead advisories related to the city's drinking water.

A recent study by a Hurley Medical Center doctor says infants and children are being found with elevated levels of lead in their blood since the city switched to using the Flint River as its water source.

The General Motors Foundation donated $50,000, the United Way of Genesee County pitched in $25,000 and another $10,000 came from the Making Our Children Smile Foundation.

Another $20,000 from community development block grant funds was secured by the city, according to the United Way.

The United Way will work with the Genesee County Health Department to purchase the filters, which cost about $20 each. The health department is working with community partners to prioritize need and distribute filters to the highest risk populations first to ensure the safety of the community. Water filters are NSF certified to include removal of lead.

"Upon first learning of the water quality issue in the city of Flint the United Way partnered with Hurley Children's Hospital, Mott Children's Health Center, the Food Bank of Eastern Michigan and the Flint Diaper Bank to provide bottled water to families in the community," Jamie Gaskin, CEO of the United Way of Genesee County said in a statement. "Now is the time to provide a more economical and long-term solution to help residents until the water issue is resolved."

Information on distribution of the filters will be communicated through the Health Department website, as well as a hotline that is in the process of being established, the statement said.

The Flint School District also has stopped using the city as a water source and is seeking bottled water donations.

"This is a great example of community members, leaders and partners banding together to ensure people have access to clean drinking water," Flint Mayor Dayne Walling said in a statment.

The Community Foundation of Greater Flint also is working to get filters for the initiative.

"Giving back to our communities is more than investing in our facilities; it involves helping to improve the quality of life for those who live in our plant cities," Cathy Clegg, GM North American Manufacturing and Labor Relations vice president said in a statement. "The United Way is a long-time GM partner and is well positioned in the Flint area to help the residents most in need."

Cindy Estrada, UAW vice president and director of the union's GM Department, worked with Clegg to secure the $50,000 grant from the GM Foundation. The UAW was also involved in initial efforts to get bottled water into the community, the statement said.

"The UAW has a proud history of helping workers and their families, but we also take great pride in assisting people in our communities," Estrada said. "Together with the United Way of Genesee County, GM and the GM Foundation, we hope residents are able to access clean water for their families."

GM donates $50K for water filters for Flint residents

Posted: Oct 01, 2015 10:22 AM CDT Updated: Oct 01, 2015 10:22 AM CDT

By Brianna Owczarzak, Managing Web Editor

FLINT, MI (WNEM) -General Motors is stepping up to help Flint residents with the water crisis.

The GM Foundation is donating $50,000 to purchase water filters for Flint residents. The donation went to the United Way of Genesee County.

The filters will remove contaminants from the water, allowing residents to use the water for drinking and cooking.

“Giving back to our communities is more than investing in our facilities; it involves helping to improve the quality of life for those who live in our plant cities,” said Cathy Clegg, GM North American Manufacturing and Labor Relations vice president. “The United Way is a long-time GM partner and is well positioned in the Flint area to help the residents most in need.”

Overall, the United Way of Genesee County and the city of Flint raised more than $100,000 for water filters.

Along with the $50,000 from GM, the United Way gave $25,000 from its general fund, the Making our Children Smile Foundation donated $10,000, and $20,000 came from Community Development Block Grant funds.

The water filters cost about $20 each, according to the United Way.

The highest risk populations will get the water filters first.

“This is a great example of community members, leaders and partners banding together to ensure people have access to clean drinking water,” Flint Mayor Dayne Walling said.

Flint resident: Water looks like urine, smells like sewer

Jim Lynch and Chad Livengood, The Detroit News 8:50 a.m. EDT October 1, 2015

Flint — The questionable quality of the city's drinking water made headlines again this week, but not much of it has been news to Ashley Holt.

For almost a year, the water from her faucet has looked "like urine," smelled "like the sewer" and, if you're brave enough to sip it, hasn't tasted "normal," the 25-year-old Flint resident said. It's why she's limited for months how often her children — ages 5, 6 and 12 — come in contact with it.

But following last week's revelation that Flint children are showing higher amounts of lead in their blood, the situation has escalated for her cash-strapped family.

In a city where 41.5 percent of the population is below the poverty line, a lack of money is the reason Holt was walking instead of driving downtown this week to pick up her children from school. She scrambles to find enough to buy them bottled water.

"The only option I've got is just to not drink the water and stick with pop and juice," Holt said. "(I) go to the store and get a gallon of water a day, if I can afford it at the time."

The hardships experienced by residents here are having public health and political ripple effects that are being felt from city hall to the governor's office. Gov. Rick Snyder said Tuesday he could unveil "more action steps" as early as the end of this week.

Researchers from Virginia Tech and Hurley Children's Hospital in Flint said last week

that lead levels in local children have risen since the city, under Snyder's appointed emergency manager, started getting its water from the Flint River instead of the Detroit Water & Sewerage System. Studies showed that in some areas lead levels doubled and, in two local zip codes, the levels tripled.

Lead poisoning can cause learning disabilities, according to the Centers for Disease Control and Prevent. At very high levels, it also can lead to seizures, coma and even death.

Water quality has become the central issue in the mayoral election that is a month away. It also has put Snyder's administration — particularly the Michigan Department of Environmental Quality — under the microscope. There are questions about how the DEQ tests water quality, as well as the governor's back-channel efforts this summer to send 1,500 water filters to Flint families when state officials insisted the water was fine.

Sommer Adams said there are doctor's visits in the future for her three kids because she fears they may have been exposed to lead.

"Even though I don't see it in my water or haven't experienced no type of (problems) with drinking it, you never know," said Adams, 23.

Governor questioned

The idea of switching water systems seemed to make sense. Municipal officials didn't like the rates residents were forced to pay and wanted to be part of a new supply system being built to draw from Lake Huron, just like Detroit's system.

Tapping the river for a year or two was supposed to provide water until the Karegondi Water Authority was up and running. Almost immediately after the switch in April 2014, there were complaints about the treated river water's appearance, smell and taste.

A year later, the state-appointed successor emergency manager, Jerry Ambrose, rejected the city council's attempts to tie back to the Detroit system as "incomprehensible."

"(Lake Huron) water from Detroit is no safer than water from Flint," Ambrose said at the time.

The Snyder administration's confirmation Tuesday that it helped an anonymous donor send 1,500 water filters to Flint families seemed to undercut the decision. At an unrelated Wednesday press conference, the Capitol press corps grilled the governor about Flint's woes.

"It appears that lead levels could be higher or have increased... ," Snyder said. "We're looking at making sure they're within safe limits, according to the federal government."

Mayor election a focus

The water problems have ratcheted up interest in the Nov. 3 mayoral election, which figured to draw more scrutiny anyway since Flint emerged from state control in late April.

Business owner and candidate Karen Weaver has attacked incumbent Mayor Dayne Walling for failing to take back total control of the government from the city administrator left in place by the state's emergency manager. After the reporting of the lead results, Weaver has claimed that Walling knew about the problem as far back as June, thanks to a U.S. Environmental Protection Agency report that flagged the situation.

"You didn't speak up," she said Wednesday. "Yes, the emergency manager had power to make the final decision, but nobody takes your voice."

Walling countered that the first time he heard of the elevated lead levels was Sept. 21, a few days before the results were made public.

"I'm asking everyone to carefully consider my record because it has been a complicated four years with four different emergency managers that each involved myself and city council in different ways at different times," Walling said.

This month, Walling wrote to Snyder requesting the state help with $30 million in new infrastructure improvement aid.

Public Information Officer Jason Lorenz said the city hasn't received a response.

Old pipes complicate testing

Shervon Goss, 32, paints a disturbing picture of what she experiences in her townhouse complex in Flint's south end. Her tap water has an odor, Goss said, and showers result in dry skin and rashes.

"It's a complex with a whole lot of people and a whole lot of babies there," she said. "These are people who probably can't afford to go and buy bottled water. So they get forced into drinking the (tap) water that's unhealthy."

Like many residents, Goss wonders how this happened.

State officials admitted it is difficult to do consistent lead testing on water being pumped through old lead plumbing and service connection lines. Water tested at intake or upon release from the treatment plant can be exposed to lead when it reaches old lead connections on private property, the officials said.

“The testing protocol that we have tends to offer a systemwide assessment of how water interacts with that line and home plumbing,” said Brad Wurfel, DEQ’s spokesman. “There’s a lot we unfortunately don’t know about those (home lead) levels.”

Some local groups have stepped up to provide free water to residents. The House of Prayer Missionary Baptist Church gave away bottled water Wednesday, drawing a line of cars.

On Thursday, the Food Bank of Eastern Michigan will ship packages of diapers combined with gallon jugs of water to area social service organizations.

Local activists are prepared to hold protests and urge residents to stop paying their water bills if state and city officials don’t make the switch back to water from Detroit, said Rev. Alfred Harris, pastor of Saints Church in Flint.

“We’re praying that the governor will say we’ve got to go back to Detroit water,” Harris said.

http://www.detroitnews.com/story/news/local/michigan/2015/10/01/flint-water-epa/73160176/

Coalition asks EPA to intervene in Flint water issue

Jim Lynch, The Detroit News 3:38 p.m. EDT October 1, 2015

The federal government needs to step in to ensure residents in Flint have safe drinking water following health complaints and findings of elevated lead levels in children's blood, a group of environmental and civil rights groups said Thursday.

The coalition of the American Civil Liberties Union of Michigan, the National Resources Defense Council and the Flint-based group Water You Fighting For said they are petitioning the U.S. Environmental Protection Agency to intervene in the city's year-and-a-half-long water crisis.

State officials will be in Flint Friday to address concerns over the city's water situation.

That situation escalated in the past week after researchers from Virginia Tech and Hurley Children's Hospital in Flint said lead levels in local children have risen. Studies showed that in some areas lead levels doubled and, in two local ZIP codes, tripled. Those finding came on the heels of 19 months of complaints about the odor, appearance and taste of the tap water that is drawn from the Flint River.

“Neither the City of Flint nor the State of Michigan is doing enough to fix the problem of lead in our drinking water," said LeeAnne Walters, a member of the Flint-based group Water You Fighting For. “As evidenced by the ongoing poisoning of the children of Flint, it’s time for the EPA to take immediate action to provide us with a safe water source. The city and state need to test for lead and copper as intended by the federal lead and copper rule.”

Walters’ organization was joined by the American Civil Liberties Union and the Natural Resources Defense Council in asking the federal government to step in. The groups want the EPA to compel the city to return to getting its water from the Detroit Water and Sewerage Department.

Flint is in the midst of a transition to a new water source to get out from under the rates charged by the Detroit water system. It’s a move that was instigated while the city was under the leadership of an emergency manager appointed by Gov. Rick Snyder.

The city is committed to getting its water from Lake Huron through the Karegondi Water Authority when the system comes online, possibly as soon as next year. In the interim, the Flint River has been providing drinking water to city residents since last spring.

But now there is evidence that the water is taking on lead from the plumbing connections that tie much of the city’s old housing stock to city waterlines.

State officials said Thursday they will outline their response to the lead problems in Flint on Friday.

“This issue is one that we’ve been actively engaged on and our administration will be outlining a collaborative, comprehensive action plan tomorrow afternoon,” said Snyder spokeswoman Sara Wurfel. “We believe protecting public health is paramount and safe, clean, accessible drinking water is essential. That’s what we are focused on helping ensure and working together across local, state and federal levels to bring all resources and ideas to bear.

“(I) would add that the governor and state agencies have been closely working with Flint leaders on their infrastructure challenges for a while, including providing $4.2 million in grants and restructured loan financing to provide resources needed to locate and fix infrastructure problems and add the carbon filtration system, additional testing and helping identify and provide filters.”

On Thursday, the groups asking for federal intervention charged city and state officials with moving too slowly to address the problems.

“Flint city officials, state-appointed emergency managers and the Michigan Department of Environmental Quality have all failed monumentally in their duty to provide the people of Flint with clean, safe drinking water," said Kary Moss, director of the ACLU of Michigan. “Now that the truth is revealed, further action is imperative.

“The devastating revelations from independent researchers, as well as our own nearly year-long investigation, demand an immediate, effective and comprehensive response. The EPA, along with and city officials, must exercise their full authority to guarantee that the people of Flint are protected from the hazardous water now flowing into their homes. The first step should be to overturn the emergency manager order and remove the Flint River as the city’s source of water.”

Public health emergency declared due to lead in Flint water

By The Associated Press | Posted Oct 1st, 2015 @ 1:01pm

FLINT, Mich. (AP) — Genesee County commissioners have declared a public health emergency for residents using water from the Flint River through the city's water system.

Tests have shown children with elevated levels of lead, months after Flint began drawing and treating water from the river. The water is aggravating lead in old pipes in thousands of homes.

Commissioners issued an advisory Thursday recommending that people not drink the water unless tests show lead levels are down or the water has gone through an approved filter.

The General Motors Foundation, the local United Way and others have given at least $105,000 to buy filters.

Gov. Rick Snyder has pledged to announce some type of action by the end of the week. He says the consequences of using the river weren't "fully understood."

http://www.freep.com/story/news/2015/10/01/legislators-take-action-fix-flint-water-supply/73152540/

Legislators take action to fix Flint water supply

By Kathleen Gray, Detroit Free Press Lansing Bureau 2:31 p.m. EDT October 1, 2015

LANSING The Michigan Legislature is beginning to take notice of the ongoing controversy surrounding Flint's water system, which has been plagued since the city disconnected from the Detroit water system and began pulling its water supply from the Flint River.

The state Senate approved a supplemental appropriations bill that included a $100 placeholder while the state looks for a solution to the water issue.

“We want to make sure we have an accurate number. We didn't want to put too much in or not enough," said state Sen. Jim Ananich, D-Flint. "We want to get an accurate understanding of what it's going to cost to get us the help that we need."

The appropriation comes on the heels of Gov. Rick Snyder telling reporters on Wednesday that he'll have some more answers on the state's role in fixing Flint's water problems by the end of the week.

An anonymous benefactor and the state have begun distributing water filters to Flint residents in recent weeks after a Hurley Medical Center researcher found lead levels increasing in Flint.

"We've been actively working that issue for a significant period of time and providing additional resources recently," Snyder said. "I would expect us to have more to talk about that by the end of of the week and how we're partnering with Flint and the federal government on this."

In 2014, city officials ended the city's contract with the Detroit Water and Sewerage Department, saying that water costs were too high. They opted instead to pull from the Karegnondi Water Authority, which is building a system to supply Genesee County with water pulled from Lake Huron. In the long run, this will mean lower water costs, officials have said, adding that water from the Detroit system will cost $1.5 million more a month than the city is paying now.

But until the new system comes online in 2016, Flint is temporarily pulling water from the Flint River. Since it made the switch, residents have complained that the water smells, is discolored and makes them sick.

And the Hurley researcher recently found that the number of Flint children with elevated blood-lead levels — 5 micrograms per deciliter or more — jumped from 2.1% in the 20 months prior to Sept. 15, 2013, to 4.0% between Jan. 1 and Sept. 15 this year. In certain ZIP codes, the change was even more troubling, she said — jumping from 2.5% of the children tested to 6.3%.

Ananich said filters need to be made available to affected residents, especially vulnerable citizens like children and senior citizens, and the corrosion in the water system pipes needs to be addressed.

“And I think we need to move to a new water source, potentially going back to Detroit,” he said. “Filters can do a lot of good, corrosion control can do some good. But a new water source has to happen and it has to happen soon.”

In addition to the money for Flint water issue, the appropriations bill approved by the Senate also included a $7.7-million settlement of a lawsuit filed by a Flint woman whose car was hit by a Michigan State Police trooper, who was pursuing a driver who refused to stop for a seat belt violation.

The woman and her daughter were injured in the July 3, 2014, crash and another passenger Jacqueline Nichols, 64, of Flint, was killed. Trooper Timothy Fagin received undisclosed discipline after the crash and remains a state trooper.

Flint data on lead water lines stored on 45,000 index cards

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 01, 2015 at 12:18 PM

FLINT, MI -- The city knows which homes in Flint have pipes most likely to leach lead into tap water, but can't easily access the information because it's kept on about 45,000 index cards.

Department of Public Works Director Howard Croft said his office is trying to convert data from the cards, including whether homes have lead service lines, to an electronic spreadsheet program so that homes with the highest risk of lead in water can be easily identified.

The effort could be critical to the distribution of 5,250 lead-clearing water filters being funded by the United Way, General Motors and others.

A United Way news release today, Oct. 1, says filters will be distributed "to the highest-risk populations first to ensure the safety of the community."

Testing by Virginia Tech university and a study by the director of Hurley Medical Center's pediatric residency program have warned of a serious problem with lead in Flint's drinking water.

Croft said Wednesday, Sept. 30, that he "can't put a number on" how long it will take the city to convert its paper records into electronic data or maps that can be used to pinpoint lead hotspots. "It's on our to-do list."

Work on computerizing information on the index cards has started, but about 75 percent of the work remains, the DPW director told the City Council Wednesday.

Although the city's water is lead-free when it leaves Flint's water treatment plant, lead service lines that feed about half of homes and businesses in the city have the potential to leach lead as the water flows through the pipes.

Experiments by Virginia Tech university show Flint's treated water -- drawn from the Flint River -- is about 19 times more corrosive than Lake Huron water that had been purchased from the city of Detroit for decades, making the problem much worse than in the past.

Flint changed its drinking water source from Lake Huron to Flint River in April 2014, a decision that came as the city was being run by a state-appointed emergency manager.

Although Flint Mayor Dayne Walling has said the city will complete plans for making the river water less corrosive by the end of the year, there is no treatment for corrosion -- such as the addition of phosphates -- currently.

Gov. Rick Snyder said this week that the state is preparing to announce its plans for assisting the city with the lead in water problem.

After months of assurances by the DEQ that Flint water met all requirements of the Safe Drinking Water Act, Snyder said Wednesday, Sept. 30, that "it appears that lead levels could be higher or could be increased.".

While the governor said the decision to run Flint River water through the city's aging water distribution system, including lead service lines to homes, was made "with the community," Walling has said he had no involvement in the decision and privately questioned it.

Croft has said about half of Flint's homes have lead service lines and quickly identifying where they are located could be critical for water filter distribution or any program that involves the removal and replacement of lead pipes.

Walling asked Snyder in a Sept. 14 letter for $10 million for what he called a "healthy homes initiative" aimed at replacing lead service lines in "the most vulnerable households."

Croft said he's been in contact with the University of Michigan-Flint and Kettering University, asking if students might be available to help city employees with the task of computerizing data about lead pipes from the index cards.

City Councilwoman Vicki VanBuren said she was surprised that the city's information on lead service lines isn't an a format that's already easily accessible.

"I had asked if we could get a map," VanBuren said. "When I requested that information ... (Croft) responded, 'OK, no problem.' So I was surprised when there was nothing to see.

"That seems like basic information they should already be working with," she said.

More than 5,000 in Flint to get lead water filters following donation

By Dominic Adams | dadams5@mlive.com The Flint Journal Follow on Twitter on October 01, 2015 at 11:35 AM, updated October 01, 2015 at 12:04 PM

FLINT, MI – More than 5,000 Flint residents will be able to get water filters following an influx of $105,000 from private and public sources.

The filters come as the city and county have issued lead advisories related to the city's drinking water.

A recent study by a Hurley Medical Center doctor says infants and children are being found with elevated levels of lead in their blood since the city switched to using the Flint River as its water source.

The General Motors Foundation donated $50,000, the United Way of Genesee County pitched in $25,000 and another $10,000 came from the Making Our Children Smile Foundation.

Another $20,000 from community development block grant funds was secured by the city, according to the United Way.

The United Way will work with the Genesee County Health Department to purchase the filters, which cost about $20 each. The health department is working with community partners to prioritize need and distribute filters to the highest risk populations first to ensure the safety of the community. Water filters are NSF certified to include removal of lead.

"Upon first learning of the water quality issue in the city of Flint the United Way partnered with Hurley Children's Hospital, Mott Children's Health Center, the Food Bank of Eastern Michigan and the Flint Diaper Bank to provide bottled water to families in the community," Jamie Gaskin, CEO of the United Way of Genesee County said in a statement. "Now is the time to provide a more economical and long-term solution to help residents until the water issue is resolved."

Information on distribution of the filters will be communicated through the Health Department website, as well as a hotline that is in the process of being established, the statement said.

The Flint School District also has stopped using the city as a water source and is seeking bottled water donations.

"This is a great example of community members, leaders and partners banding together to ensure people have access to clean drinking water," Flint Mayor Dayne Walling said in a statment.

The Community Foundation of Greater Flint also is working to get filters for the initiative.

"Giving back to our communities is more than investing in our facilities; it involves helping to improve the quality of life for those who live in our plant cities," Cathy Clegg, GM North American Manufacturing and Labor Relations vice president said in a statement. "The United Way is a long-time GM partner and is well positioned in the Flint area to help the residents most in need."

Cindy Estrada, UAW vice president and director of the union's GM Department, worked with Clegg to secure the $50,000 grant from the GM Foundation. The UAW was also involved in initial efforts to get bottled water into the community, the statement said.

"The UAW has a proud history of helping workers and their families, but we also take great pride in assisting people in our communities," Estrada said. "Together with the United Way of Genesee County, GM and the GM Foundation, we hope residents are able to access clean water for their families."

GM donates $50K for water filters for Flint residents

Posted: Oct 01, 2015 10:22 AM CDT Updated: Oct 01, 2015 10:22 AM CDT

By Brianna Owczarzak, Managing Web Editor

FLINT, MI (WNEM) -General Motors is stepping up to help Flint residents with the water crisis.

The GM Foundation is donating $50,000 to purchase water filters for Flint residents. The donation went to the United Way of Genesee County.

The filters will remove contaminants from the water, allowing residents to use the water for drinking and cooking.

“Giving back to our communities is more than investing in our facilities; it involves helping to improve the quality of life for those who live in our plant cities,” said Cathy Clegg, GM North American Manufacturing and Labor Relations vice president. “The United Way is a long-time GM partner and is well positioned in the Flint area to help the residents most in need.”

Overall, the United Way of Genesee County and the city of Flint raised more than $100,000 for water filters.

Along with the $50,000 from GM, the United Way gave $25,000 from its general fund, the Making our Children Smile Foundation donated $10,000, and $20,000 came from Community Development Block Grant funds.

The water filters cost about $20 each, according to the United Way.

The highest risk populations will get the water filters first.

“This is a great example of community members, leaders and partners banding together to ensure people have access to clean drinking water,” Flint Mayor Dayne Walling said.

Flint resident: Water looks like urine, smells like sewer

Jim Lynch and Chad Livengood, The Detroit News 8:50 a.m. EDT October 1, 2015

Flint — The questionable quality of the city's drinking water made headlines again this week, but not much of it has been news to Ashley Holt.

For almost a year, the water from her faucet has looked "like urine," smelled "like the sewer" and, if you're brave enough to sip it, hasn't tasted "normal," the 25-year-old Flint resident said. It's why she's limited for months how often her children — ages 5, 6 and 12 — come in contact with it.

But following last week's revelation that Flint children are showing higher amounts of lead in their blood, the situation has escalated for her cash-strapped family.

In a city where 41.5 percent of the population is below the poverty line, a lack of money is the reason Holt was walking instead of driving downtown this week to pick up her children from school. She scrambles to find enough to buy them bottled water.

"The only option I've got is just to not drink the water and stick with pop and juice," Holt said. "(I) go to the store and get a gallon of water a day, if I can afford it at the time."

The hardships experienced by residents here are having public health and political ripple effects that are being felt from city hall to the governor's office. Gov. Rick Snyder said Tuesday he could unveil "more action steps" as early as the end of this week.

Researchers from Virginia Tech and Hurley Children's Hospital in Flint said last week

that lead levels in local children have risen since the city, under Snyder's appointed emergency manager, started getting its water from the Flint River instead of the Detroit Water & Sewerage System. Studies showed that in some areas lead levels doubled and, in two local zip codes, the levels tripled.

Lead poisoning can cause learning disabilities, according to the Centers for Disease Control and Prevent. At very high levels, it also can lead to seizures, coma and even death.

Water quality has become the central issue in the mayoral election that is a month away. It also has put Snyder's administration — particularly the Michigan Department of Environmental Quality — under the microscope. There are questions about how the DEQ tests water quality, as well as the governor's back-channel efforts this summer to send 1,500 water filters to Flint families when state officials insisted the water was fine.

Sommer Adams said there are doctor's visits in the future for her three kids because she fears they may have been exposed to lead.

“Even though I don't see it in my water or haven't experienced no type of (problems) with drinking it, you never know,” said Adams, 23.

Governor questioned

The idea of switching water systems seemed to make sense. Municipal officials didn't like the rates residents were forced to pay and wanted to be part of a new supply system being built to draw from Lake Huron, just like Detroit's system.

Tapping the river for a year or two was supposed to provide water until the Karegondi Water Authority was up and running. Almost immediately after the switch in April 2014, there were complaints about the treated river water's appearance, smell and taste.

A year later, the state-appointed successor emergency manager, Jerry Ambrose, rejected the city council's attempts to tie back to the Detroit system as "incomprehensible."

"(Lake Huron) water from Detroit is no safer than water from Flint," Ambrose said at the time.

The Snyder administration's confirmation Tuesday that it helped an anonymous donor send 1,500 water filters to Flint families seemed to undercut the decision. At an unrelated Wednesday press conference, the Capitol press corps grilled the governor about Flint's woes.

"It appears that lead levels could be higher or have increased... ," Snyder said. "We're looking at making sure they're within safe limits, according to the federal government."

Mayor election a focus

The water problems have ratcheted up interest in the Nov. 3 mayoral election, which figured to draw more scrutiny anyway since Flint emerged from state control in late April.

Business owner and candidate Karen Weaver has attacked incumbent Mayor Dayne Walling for failing to take back total control of the government from the city administrator left in place by the state's emergency manager. After the reporting of the lead results, Weaver has claimed that Walling knew about the problem as far back as June, thanks to a U.S. Environmental Protection Agency report that flagged the situation.

"You didn't speak up," she said Wednesday. "Yes, the emergency manager had power to make the final decision, but nobody takes your voice."

Walling countered that the first time he heard of the elevated lead levels was Sept. 21, a few days before the results were made public.

“I’m asking everyone to carefully consider my record because it has been a complicated four years with four different emergency managers that each involved myself and city council in different ways at different times,” Walling said.

This month, Walling wrote to Snyder requesting the state help with $30 million in new infrastructure improvement aid.

Public Information Officer Jason Lorenz said the city hasn’t received a response.

Old pipes complicate testing

Shervon Goss, 32, paints a disturbing picture of what she experiences in her townhouse complex in Flint’s south end. Her tap water has an odor, Goss said, and showers result in dry skin and rashes.

“It’s a complex with a whole lot of people and a whole lot of babies there,” she said. “These are people who probably can’t afford to go and buy bottled water. So they get forced into drinking the (tap) water that’s unhealthy.”

Like many residents, Goss wonders how this happened.

State officials admitted it is difficult to do consistent lead testing on water being pumped through old lead plumbing and service connection lines. Water tested at intake or upon release from the treatment plant can be exposed to lead when it reaches old lead connections on private property, the officials said.

“The testing protocol that we have tends to offer a systemwide assessment of how water interacts with that line and home plumbing,” said Brad Wurfel, DEQ’s spokesman. “There’s a lot we unfortunately don’t know about those (home lead) levels.”

Some local groups have stepped up to provide free water to residents. The House of Prayer Missionary Baptist Church gave away bottled water Wednesday, drawing a line of cars.

On Thursday, the Food Bank of Eastern Michigan will ship packages of diapers combined with gallon jugs of water to area social service organizations.

Local activists are prepared to hold protests and urge residents to stop paying their water bills if state and city officials don’t make the switch back to water from Detroit, said Rev. Alfred Harris, pastor of Saints Church in Flint.

“We’re praying that the governor will say we’ve got to go back to Detroit water,” Harris said.

Subject: Proposed EPA comment on Michigan/Flint press conference announcing steps to address lead levels in Flint drinking water

As promised, we have drafted a brief statement to be released after the Michigan/Flint press conference that will be held tomorrow in Flint at 1:30 eastern. We have also drafted answers to two follow up questions that we expect to get tomorrow and are asking OGC to assist with an answer to a third question that we expect to receive. Please let us know if you have any suggestions.

US EPA Regional Administrator comment on the State of Michigan and City of Flint press conference on October 2, 2015: Actions that the State of Michigan and the City of Flint announced today will protect public health. The immediate steps being taken to implement corrosion control will reduce lead in drinking water, as required by the Safe Drinking Water Act. US EPA will continue to provide technical assistance to the State of Michigan and the City of Flint to support their joint effort.

1. **What about the interim report that has been attributed to a "rogue" EPA employee?** The interim report was prepared by a Region 5 employee as part of his regular duties at EPA. It was intended to be an internal document to brief EPA managers on lead levels in drinking water at three residential properties in Flint. The interim report notes that a "final report will be submitted once additional analyses have been completed on pipe and water samples." **Has a final report been prepared?** Yes. **Can I get a copy of the report?** The report contains Personally Identifiable Information and other confidential health data. If a FOIA request is submitted for the document, EPA attorneys will determine the extent to which a redacted document can be released. **Why was the interim report released without redaction?** EPA did not release the interim report to the public.

2. **What about the SDWA petition that was submitted to EPA on 10/1/2015?** EPA will review the petition.

3. **Are all large drinking water systems required to implement corrosion control?** OGC to draft answer consistent with the discussion earlier today.

Who's to blame for Flint's water crisis? Virginia Tech researcher points the finger at MDEQ

Yesterday, Gov. Rick Snyder admitted that the decision to switch the city of Flint's water supply from Detroit's system over to the Flint River was not well planned.

“In terms of a mistake, what I would say is, is there are probably things that were not as fully understood as when that switch was made,” Snyder said.

At the direction of the state-appointed emergency manager, the city made the switch in April 2014, and problems with the drinking water started soon after.

People complained of brown water. There were boil-water advisories after the water was found to have E. coli contamination, and the drinking water also had unsafe levels of a chlorine byproduct (total trihalomethanes).

Fast forward almost a year and a half, and now we learn some residents in the city are being exposed to unsafe levels of lead in their drinking water.

How could one of Michigan’s major cities be facing this problem?

Marc Edwards, a civil engineering professor from Virginia Tech University and a nationally renowned expert on water treatment, has put the blame squarely on the agency in charge of overseeing the safety of Flint’s drinking water, the Michigan Department of Environmental Quality.

Marc Edwards of Virginia Tech explains why he thinks the Michigan Department of Environmental Quality is to blame for Flint's water crisis. Edwards published a blog post yesterday in which he writes:

Given MDEQ's insistence that there is absolutely nothing wrong with Flint water, we have created a timeline that illustrates how MDEQ's mistakes and deception created the Flint water crisis in the first place.

In his timeline, Edwards says the state failed to require that the city have a corrosion-control program in place when the city switched over to Flint River water.

Edwards says current estimates are that Flint has about 15,000 drinking water service lines made of lead.

"What we discovered to our shock was that they switched to a new water source that was obviously very corrosive, meaning it would eat up the lead pipe and iron pipe and essentially put the metals into the water, without controlling the corrosion," Edwards says. "And this is a horrible idea in a city full of lead plumbing and lead pipe like Flint."

Edwards says current estimates are that Flint has about 15,000 drinking water service lines made of lead.

How dangerous metals can get into drinking water

When water flows through copper and lead pipes, it can take up some of the metal and make the water unsafe. To control for this problem, the Environmental Protection Agency has what's called a "lead and copper rule."

The purpose of the rule is listed in this "quick reference guide:"

Protect public health by minimizing lead (Pb) and copper (Cu) levels in drinking water, primarily by reducing water corrosivity. Pb and Cu enter drinking water mainly from corrosion of Pb and Cu containing plumbing materials.

To keep these metals from leaching into drinking water, municipal treatment plants can change the water chemistry to lower the water's ability to corrode these pipes.

It's called "corrosion control," and Edwards says the Michigan Department of Environmental Quality covered up the fact that Flint had no corrosion control program in place.

"Before you switch to a new water source, six months to a year ahead of time, you are supposed to do laboratory experiments to determine the corrosivity of the water," says Edwards. "And the chemistry – the pH, the alkalinity, and the phosphate that you need to make sure that the lead stays on the pipes and out of the water."

Edwards contends that the new water system had to have a "corrosion control" plan in place so that "you're not doing an uncontrolled human experiment on a city's population."

According to emails obtained by the ACLU of Michigan, a state MDEQ official, Stephen Busch, responded to a request from EPA Region 5, the federal agency that oversees MDEQ, that the new water system in Flint did have a corrosion control program in place.

That exchange occurred in February of this year.

In April, according to the emails, the EPA Region 5 official later found out that was not true. Flint, it turns out, did not have a corrosion-control program in place.

From the emails:

Pat Cook [of MDEQ] has confirmed that following the disconnection from Detroit, Flint has not been operating any corrosion control treatment, which is very concerning given the likelihood of LSLs [lead service lines] in the city.

The state has maintained that it is not required under the EPA's lead and copper rule to have a corrosion-control plan in place until two rounds of testing are completed to determine what that plan looks like.

More from Michigan Radio's Lindsey Smith:

At face value, the EPA rules are clear, all water systems that serve more than 50,000 people must have some kind of corrosion control.

But when you switch water sources, there is apparently some room for interpretation.

In approving updates to this federal regulation in 2000, the EPA noted that "water systems need to make treatment changes, on occasion, to react to changing circumstances."

In these cases, the rule does not "prevent a state from approving treatment changes," but it's not entirely clear if the state can approve having zero corrosion-control treatment.

As Edwards understands it, the EPA should have acted once the agency found out the state had no corrosion-control plan in place in Flint.

"If there was ever a case where [the] EPA should exert emergency powers and take primacy away from an agency, this is it."

“If there was ever a case where [the] EPA should exert emergency powers and take primacy away from an agency, this is it,” he said.

Edwards says the city was also not conducting tests for lead and copper properly.

The point of the lead and copper rule is to make sure cities are sampling homes that are high risk – that is, homes serviced by lead pipe.

An ACLU of Michigan investigation found that the city did not know whether it was testing homes serviced by lead pipes.

In this video, Michael Glasgow, the utilities manager for Flint, indicated the city doesn't know where the lead pipes are.

Coalition asks EPA to intervene in Flint water issue

Jim Lynch, The Detroit News 3:38 p.m. EDT October 1, 2015

The federal government needs to step in to ensure residents in Flint have safe drinking water following health complaints and findings of elevated lead levels in children's blood, a group of environmental and civil rights groups said Thursday.

The coalition of the American Civil Liberties Union of Michigan, the National Resources Defense Council and the Flint-based group Water You Fighting For said they are petitioning the U.S. Environmental Protection Agency to intervene in the city's year-and-a-half-long water crisis.

State officials will be in Flint Friday to address concerns over the city's water situation.

That situation escalated in the past week after researchers from Virginia Tech and Hurley Children's Hospital in Flint said lead levels in local children have risen. Studies showed that in some areas lead levels doubled and, in two local ZIP codes, tripled. Those finding came on the heels of 19 months of complaints about the odor, appearance and taste of the tap water that is drawn from the Flint River.

"Neither the City of Flint nor the State of Michigan is doing enough to fix the problem of lead in our drinking water," said LeeAnne Walters, a member of the Flint-based group Water You Fighting For. "As evidenced by the ongoing poisoning of the children of Flint, it's time for the EPA to take immediate action to provide us with a safe water source. The city and state need to test for lead and copper as intended by the federal lead and copper rule."

Walters' organization was joined by the American Civil Liberties Union and the Natural Resources Defense Council in asking the federal government to step in. The groups want the EPA to compel the city to return to getting its water from the Detroit Water and Sewerage Department.

Flint is in the midst of a transition to a new water source to get out from under the rates charged by the Detroit water system. It's a move that was instigated while the city was under the leadership of an emergency manager appointed by Gov. Rick Snyder.

The city is committed to getting its water from Lake Huron through the Karegondi Water Authority when the system comes online, possibly as soon as next year. In the interim, the Flint River has been providing drinking water to city residents since last spring.

But now there is evidence that the water is taking on lead from the plumbing connections that tie much of the city's old housing stock to city waterlines.

State officials said Thursday they will outline their response to the lead problems in Flint on Friday.

"This issue is one that we've been actively engaged on and our administration will be outlining a collaborative, comprehensive action plan tomorrow afternoon," said Snyder spokeswoman Sara Wurfel. "We believe protecting public health is paramount and safe, clean, accessible drinking water is essential. That's what we are focused on helping ensure and working together across local, state and federal levels to bring all resources and ideas to bear.

"(I) would add that the governor and state agencies have been closely working with Flint leaders on their infrastructure challenges for a while, including providing $4.2 million in grants and restructured loan financing to provide resources needed to locate and fix infrastructure problems and add the carbon filtration system, additional testing and helping identify and provide filters."

On Thursday, the groups asking for federal intervention charged city and state officials with moving too slowly to address the problems.

"Flint city officials, state-appointed emergency managers and the Michigan Department of Environmental Quality have all failed monumentally in their duty to provide the people of Flint with clean, safe drinking water," said Kary Moss, director of the ACLU of Michigan. "Now that the truth is revealed, further action is imperative.

"The devastating revelations from independent researchers, as well as our own nearly year-long investigation, demand an immediate, effective and comprehensive response. The EPA, along with and city officials, must exercise their full authority to guarantee that the people of Flint are protected from the hazardous water now flowing into their homes. The first step should be to overturn the emergency manager order and remove the Flint River as the city's source of water."

Public health emergency declared due to lead in Flint water

By The Associated Press | Posted Oct 1st, 2015 @ 1:01pm

FLINT, Mich. (AP) — Genesee County commissioners have declared a public health emergency for residents using water from the Flint River through the city's water system.

Tests have shown children with elevated levels of lead, months after Flint began drawing and treating water from the river. The water is aggravating lead in old pipes in thousands of homes.

Commissioners issued an advisory Thursday recommending that people not drink the water unless tests show lead levels are down or the water has gone through an approved filter.

The General Motors Foundation, the local United Way and others have given at least $105,000 to buy filters.

Gov. Rick Snyder has pledged to announce some type of action by the end of the week. He says the consequences of using the river weren't "fully understood."

Legislators take action to fix Flint water supply

By Kathleen Gray, Detroit Free Press Lansing Bureau 2:31 p.m. EDT October 1, 2015

LANSING The Michigan Legislature is beginning to take notice of the ongoing controversy surrounding Flint’s water system, which has been plagued since the city disconnected from the Detroit water system and began pulling its water supply from the Flint River.

The state Senate approved a supplemental appropriations bill that included a $100 placeholder while the state looks for a solution to the water issue.

“We want to make sure we have an accurate number. We didn’t want to put too much in or not enough,” said state Sen. Jim Ananich, D-Flint. “We want to get an accurate understanding of what it’s going to cost to get us the help that we need.”

The appropriation comes on the heels of Gov. Rick Snyder telling reporters on Wednesday that he’ll have some more answers on the state’s role in fixing Flint’s water problems by the end of the week.

An anonymous benefactor and the state have begun distributing water filters to Flint residents in recent weeks after a Hurley Medical Center researcher found lead levels increasing in Flint.

“We’ve been actively working that issue for a significant period of time and providing additional resources recently,” Snyder said. “I would expect us to have more to talk about that by the end of of the week and how we’re partnering with Flint and the federal government on this.”

In 2014, city officials ended the city's contract with the Detroit Water and Sewerage Department, saying that water costs were too high. They opted instead to pull from the Karegnondi Water Authority, which is building a system to supply Genesee County with water pulled from Lake Huron. In the long run, this will mean lower water costs, officials have said, adding that water from the Detroit system will cost $1.5 million more a month than the city is paying now.

But until the new system comes online in 2016, Flint is temporarily pulling water from the Flint River. Since it made the switch, residents have complained that the water smells, is discolored and makes them sick.

And the Hurley researcher recently found that the number of Flint children with elevated blood-lead levels — 5 micrograms per deciliter or more — jumped from 2.1% in the 20 months prior to Sept. 15, 2013, to 4.0% between Jan. 1 and Sept. 15 this year. In certain ZIP codes, the change was even more troubling, she said — jumping from 2.5% of the children tested to 6.3%.

Ananich said filters need to be made available to affected residents, especially vulnerable citizens like children and senior citizens, and the corrosion in the water system pipes needs to be addressed.

“And I think we need to move to a new water source, potentially going back to Detroit,” he said. “Filters can do a lot of good, corrosion control can do some good. But a new water source has to happen and it has to happen soon.”

In addition to the money for Flint water issue, the appropriations bill approved by the Senate also included a $7.7-million settlement of a lawsuit filed by a Flint woman whose car was hit by a Michigan State Police trooper, who was pursuing a driver who refused to stop for a seat belt violation.

The woman and her daughter were injured in the July 3, 2014, crash and another passenger Jacqueline Nichols, 64, of Flint, was killed. Trooper Timothy Fagin received undisclosed discipline after the crash and remains a state trooper.

Flint data on lead water lines stored on 45,000 index cards

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 01, 2015 at 12:18 PM

FLINT, MI -- The city knows which homes in Flint have pipes most likely to leach lead into tap water, but can't easily access the information because it's kept on about 45,000 index cards.

Department of Public Works Director Howard Croft said his office is trying to convert data from the cards, including whether homes have lead service lines, to an electronic spreadsheet program so that homes with the highest risk of lead in water can be easily identified.

The effort could be critical to the distribution of 5,250 lead-clearing water filters being funded by the United Way, General Motors and others.

A United Way news release today, Oct. 1, says filters will be distributed "to the highest-risk populations first to ensure the safety of the community."

Testing by Virginia Tech university and a study by the director of Hurley Medical Center's pediatric residency program have warned of a serious problem with lead in Flint's drinking water.

Croft said Wednesday, Sept. 30, that he "can't put a number on" how long it will take the city to convert its paper records into electronic data or maps that can be used to pinpoint lead hotspots. "It's on our to-do list."

Work on computerizing information on the index cards has started, but about 75 percent of the work remains, the DPW director told the City Council Wednesday.

Although the city's water is lead-free when it leaves Flint's water treatment plant, lead service lines that feed about half of homes and businesses in the city have the potential to leach lead as the water flows through the pipes.

Experiments by Virginia Tech university show Flint's treated water -- drawn from the Flint River -- is about 19 times more corrosive than Lake Huron water that had been purchased from the city of Detroit for decades, making the problem much worse than in the past.

Flint changed its drinking water source from Lake Huron to Flint River in April 2014, a decision that came as the city was being run by a state-appointed emergency manager.

Although Flint Mayor Dayne Walling has said the city will complete plans for making the river water less corrosive by the end of the year, there is no treatment for corrosion -- such as the addition of phosphates -- currently.

Gov. Rick Snyder said this week that the state is preparing to announce its plans for assisting the city with the lead in water problem.

After months of assurances by the DEQ that Flint water met all requirements of the Safe Drinking Water Act, Snyder said Wednesday, Sept. 30, that "it appears that lead levels could be higher or could be increased.".

While the governor said the decision to run Flint River water through the city's aging water distribution system, including lead service lines to homes, was made "with the community," Walling has said he had no involvement in the decision and privately questioned it.

Croft has said about half of Flint's homes have lead service lines and quickly identifying where they are located could be critical for water filter distribution or any program that involves the removal and replacement of lead pipes.

Walling asked Snyder in a Sept. 14 letter for $10 million for what he called a "healthy homes initiative" aimed at replacing lead service lines in "the most vulnerable households."

Croft said he's been in contact with the University of Michigan-Flint and Kettering University, asking if students might be available to help city employees with the task of computerizing data about lead pipes from the index cards.

City Councilwoman Vicki VanBuren said she was surprised that the city's information on lead service lines isn't an a format that's already easily accessible.

"I had asked if we could get a map," VanBuren said. "When I requested that information ... (Croft) responded, 'OK, no problem.' So I was surprised when there was nothing to see.

"That seems like basic information they should already be working with," she said.

More than 5,000 in Flint to get lead water filters following donation

By Dominic Adams | dadams5@mlive.com The Flint Journal Follow on Twitter on October 01, 2015 at 11:35 AM, updated October 01, 2015 at 12:04 PM

FLINT, MI – More than 5,000 Flint residents will be able to get water filters following an influx of $105,000 from private and public sources.

The filters come as the city and county have issued lead advisories related to the city's drinking water.

A recent study by a Hurley Medical Center doctor says infants and children are being found with elevated levels of lead in their blood since the city switched to using the Flint River as its water source.

The General Motors Foundation donated $50,000, the United Way of Genesee County pitched in $25,000 and another $10,000 came from the Making Our Children Smile Foundation.

Another $20,000 from community development block grant funds was secured by the city, according to the United Way.

The United Way will work with the Genesee County Health Department to purchase the filters, which cost about $20 each. The health department is working with community partners to prioritize need and distribute filters to the highest risk populations first to ensure the safety of the community. Water filters are NSF certified to include removal of lead.

"Upon first learning of the water quality issue in the city of Flint the United Way partnered with Hurley Children's Hospital, Mott Children's Health Center, the Food Bank of Eastern Michigan and the Flint Diaper Bank to provide bottled water to families in the community," Jamie Gaskin, CEO of the United Way of Genesee County said in a statement. "Now is the time to provide a more economical and long-term solution to help residents until the water issue is resolved."

Information on distribution of the filters will be communicated through the Health Department website, as well as a hotline that is in the process of being established, the statement said.

The Flint School District also has stopped using the city as a water source and is seeking bottled water donations.

"This is a great example of community members, leaders and partners banding together to ensure people have access to clean drinking water," Flint Mayor Dayne Walling said in a statment.

The Community Foundation of Greater Flint also is working to get filters for the initiative.

"Giving back to our communities is more than investing in our facilities; it involves helping to improve the quality of life for those who live in our plant cities," Cathy Clegg, GM North American Manufacturing and Labor Relations vice president said in a statement. "The United Way is a long-time GM partner and is well positioned in the Flint area to help the residents most in need."

Cindy Estrada, UAW vice president and director of the union's GM Department, worked with Clegg to secure the $50,000 grant from the GM Foundation. The UAW was also involved in initial efforts to get bottled water into the community, the statement said.

"The UAW has a proud history of helping workers and their families, but we also take great pride in assisting people in our communities," Estrada said. "Together with the United Way of Genesee County, GM and the GM Foundation, we hope residents are able to access clean water for their families."

GM donates $50K for water filters for Flint residents

Posted: Oct 01, 2015 10:22 AM CDT Updated: Oct 01, 2015 10:22 AM CDT

By Brianna Owczarzak, Managing Web Editor

FLINT, MI (WNEM) -General Motors is stepping up to help Flint residents with the water crisis.

The GM Foundation is donating $50,000 to purchase water filters for Flint residents. The donation went to the United Way of Genesee County.

The filters will remove contaminants from the water, allowing residents to use the water for drinking and cooking.

“Giving back to our communities is more than investing in our facilities; it involves helping to improve the quality of life for those who live in our plant cities,” said Cathy Clegg, GM North American Manufacturing and Labor Relations vice president. “The United Way is a long-time GM partner and is well positioned in the Flint area to help the residents most in need.”

Overall, the United Way of Genesee County and the city of Flint raised more than $100,000 for water filters.

Along with the $50,000 from GM, the United Way gave $25,000 from its general fund, the Making our Children Smile Foundation donated $10,000, and $20,000 came from Community Development Block Grant funds.

The water filters cost about $20 each, according to the United Way.

The highest risk populations will get the water filters first.

"This is a great example of community members, leaders and partners banding together to ensure people have access to clean drinking water," Flint Mayor Dayne Walling said.

Flint resident: Water looks like urine, smells like sewer

Jim Lynch and Chad Livengood, The Detroit News 8:50 a.m. EDT October 1, 2015

Flint — The questionable quality of the city's drinking water made headlines again this week, but not much of it has been news to Ashley Holt.

For almost a year, the water from her faucet has looked "like urine," smelled "like the sewer" and, if you're brave enough to sip it, hasn't tasted "normal," the 25-year-old Flint resident said. It's why she's limited for months how often her children — ages 5, 6 and 12 — come in contact with it.

But following last week's revelation that Flint children are showing higher amounts of lead in their blood, the situation has escalated for her cash-strapped family.

In a city where 41.5 percent of the population is below the poverty line, a lack of money is the reason Holt was walking instead of driving downtown this week to pick up her children from school. She scrambles to find enough to buy them bottled water.

“The only option I’ve got is just to not drink the water and stick with pop and juice,” Holt said. “(I) go to the store and get a gallon of water a day, if I can afford it at the time.”

The hardships experienced by residents here are having public health and political ripple effects that are being felt from city hall to the governor’s office. Gov. Rick Snyder said Tuesday he could unveil “more action steps” as early as the end of this week.

Researchers from Virginia Tech and Hurley Children’s Hospital in Flint said last week that lead levels in local children have risen since the city, under Snyder’s appointed emergency manager, started getting its water from the Flint River instead of the Detroit Water & Sewerage System. Studies showed that in some areas lead levels doubled and, in two local zip codes, the levels tripled.

Lead poisoning can cause learning disabilities, according to the Centers for Disease Control and Prevent. At very high levels, it also can lead to seizures, coma and even death.

Water quality has become the central issue in the mayoral election that is a month away. It also has put Snyder’s administration — particularly the Michigan Department of Environmental Quality — under the microscope. There are questions about how the DEQ tests water quality, as well as the governor’s back-channel efforts this summer to send 1,500 water filters to Flint families when state officials insisted the water was fine.

Sommer Adams said there are doctor’s visits in the future for her three kids because she fears they may have been exposed to lead.

“Even though I don’t see it in my water or haven’t experienced no type of (problems) with drinking it, you never know,” said Adams, 23.

Governor questioned

The idea of switching water systems seemed to make sense. Municipal officials didn't like the rates residents were forced to pay and wanted to be part of a new supply system being built to draw from Lake Huron, just like Detroit's system.

Tapping the river for a year or two was supposed to provide water until the Karegondi Water Authority was up and running. Almost immediately after the switch in April 2014, there were complaints about the treated river water's appearance, smell and taste.

A year later, the state-appointed successor emergency manager, Jerry Ambrose, rejected the city council's attempts to tie back to the Detroit system as "incomprehensible."

"(Lake Huron) water from Detroit is no safer than water from Flint," Ambrose said at the time.

The Snyder administration's confirmation Tuesday that it helped an anonymous donor send 1,500 water filters to Flint families seemed to undercut the decision. At an unrelated Wednesday press conference, the Capitol press corps grilled the governor about Flint's woes.

"It appears that lead levels could be higher or have increased... ," Snyder said. "We're looking at making sure they're within safe limits, according to the federal government."

Mayor election a focus

The water problems have ratcheted up interest in the Nov. 3 mayoral election, which figured to draw more scrutiny anyway since Flint emerged from state control in late April.

Business owner and candidate Karen Weaver has attacked incumbent Mayor Dayne Walling for failing to take back total control of the government from the city administrator left in place by the state's emergency manager. After the reporting of the lead results, Weaver has claimed that Walling knew about the problem as far back as June, thanks to a U.S. Environmental Protection Agency report that flagged the situation.

“You didn't speak up,” she said Wednesday. “Yes, the emergency manager had power to make the final decision, but nobody takes your voice.”

Walling countered that the first time he heard of the elevated lead levels was Sept. 21, a few days before the results were made public.

“I'm asking everyone to carefully consider my record because it has been a complicated four years with four different emergency managers that each involved myself and city council in different ways at different times,” Walling said.

This month, Walling wrote to Snyder requesting the state help with $30 million in new infrastructure improvement aid.

Public Information Officer Jason Lorenz said the city hasn't received a response.

Old pipes complicate testing

Shervon Goss, 32, paints a disturbing picture of what she experiences in her townhouse complex in Flint's south end. Her tap water has an odor, Goss said, and showers result in dry skin and rashes.

“It’s a complex with a whole lot of people and a whole lot of babies there,” she said. “These are people who probably can’t afford to go and buy bottled water. So they get forced into drinking the (tap) water that’s unhealthy.”

Like many residents, Goss wonders how this happened.

State officials admitted it is difficult to do consistent lead testing on water being pumped through old lead plumbing and service connection lines. Water tested at intake or upon release from the treatment plant can be exposed to lead when it reaches old lead connections on private property, the officials said.

“The testing protocol that we have tends to offer a systemwide assessment of how water interacts with that line and home plumbing,” said Brad Wurfel, DEQ’s spokesman. “There’s a lot we unfortunately don’t know about those (home lead) levels.”

Some local groups have stepped up to provide free water to residents. The House of Prayer Missionary Baptist Church gave away bottled water Wednesday, drawing a line of cars.

On Thursday, the Food Bank of Eastern Michigan will ship packages of diapers combined with gallon jugs of water to area social service organizations.

Local activists are prepared to hold protests and urge residents to stop paying their water bills if state and city officials don’t make the switch back to water from Detroit, said Rev. Alfred Harris, pastor of Saints Church in Flint.

“We’re praying that the governor will say we’ve got to go back to Detroit water,” Harris said.

As promised, we have drafted a brief statement to be released after the Michigan/Flint press conference that will be held tomorrow in Flint at 1:30 eastern. We have also drafted answers to two follow up questions that we expect to get tomorrow and are asking OGC to assist with an answer to a third question that we expect to receive. Please let us know if you have any suggestions.

US EPA Regional Administrator comment on the State of Michigan and City of Flint press conference on October 2, 2015: Actions that the State of Michigan and the City of Flint announced today will protect public health. The immediate steps being taken to implement corrosion control will reduce lead in drinking water, as required by the Safe Drinking Water Act. US EPA will continue to provide technical assistance to the State of Michigan and the City of Flint to support their joint effort.

1. What about the interim report that has been attributed to a “rogue” EPA employee? The interim report was prepared by a Region 5 employee as part of his regular duties at EPA. It was intended to be an internal document to brief EPA managers on lead levels in drinking water at three residential properties in Flint. The interim report notes that a “final report will be submitted once additional analyses have been completed on pipe and water samples.” **Has a final report been prepared?** Yes. **Can I get a copy of the report?** The report contains Personally Identifiable Information and other confidential health data. If a FOIA request is submitted for the document, EPA attorneys will determine the extent to which a redacted document can be released. **Why was the interim report released without redaction?** EPA did not release the interim report to the public.

2. What about the SDWA petition that was submitted to EPA on 10/1/2015? EPA will review the petition.

3. Are all large drinking water systems required to implement corrosion control? OGC to draft answer consistent with the discussion earlier today.

State to announce Flint water action plan Friday at Kettering

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 01, 2015 at 8:12 PM, updated October 01, 2015 at 11:12 PM

FLINT, MI — Local, state and federal officials are set to announce a plan for addressing concerns with lead in Flint's drinking water at a news conference Friday, Oct. 2.

An advisory from the Michigan Department of Environmental Quality said leaders will announce the plan at 1:30 p.m. at Kettering University.

The news conference comes after weeks of worrisome news about rising levels of lead in the city's tap water, documented by researchers from Virginia Tech university and a study by a Hurley Medical Center doctor that showed the number of children in the city with elevated blood levels nearly doubled after the city started using the Flint River as its water source in 2014.

Brad Wurfel, director of communications for the DEQ, said Thursday, Oct. 1, that Gov. Rick Snyder cannot attend the news conference.

Snyder said earlier this week that he expected state officials to announce plans to deal with the lead in water issue by Friday, saying, "There are probably some things that weren't as fully understood when that switch was made."

The state oversees water quality in Flint, and state-appointed emergency managers were running city government when decisions were made not to negotiate a short-term agreement to continue buying Lake Huron water from Detroit and to instead use the river as a water source.

Although the city is not currently in violation of the Safe Drinking Water Act, bacteria, the level of total trihalomethanes and lead have been problems in the water system since then.

Among those scheduled to attend the news conference are Mayor Dayne Walling; Harvey Hollins, director of the state Office of Urban Initiatives; Dan Wyant, director of the Michigan DEQ; Nick Lyon, director of the Michigan Department of Health and Human Services; and Dr. Eden Wells, chief medical executive of the state Department of Health and Human Services, the news release said.

Wurfel would not discuss the plan in advance of the news conference, but officials in local, state and the federal government have called for a variety of actions in recent weeks.

Among them: Funding for home water filters, additional testing of city water and reconnection of Flint to the Detroit water system.

"We're looking forward to coming to Flint. We recognize lead is a concern in the city," Wurfel said.

Petition launched for EPA intervention in Flint water crisis

By Amanda Emery | aemery@mlive.com The Flint Journal Follow on Twitter on October 02, 2015 at 8:20 AM, updated October 02, 2015 at 8:21 AM

FLINT, MI -- As the American Civil Liberties Union of Michigan joined a petition urging an immediate federal response to Flint's water crisis, the Greater Flint chapter held its board meeting Thursday to update residents on Flint's water situation.

The petition urges the U.S. Environmental Protection Agency to order Flint to reconnect to the Detroit Water and Sewerage Department system, among other requests.

The board meeting was held Thursday, Oct. 1 at the IINN's Great Lakes Center, 4800 South Saginaw Street in Flint. About 15 people attended the meeting as ACLU of Michigan investigative reporter Curt Guyette talked about the investigation into lead in the water and what's to come.

Woodside Church Pastor Deborah Conrad attended the meeting to get updates on the water situation. Conrad said she is looking to see what can be done to make it better.

"I've been following a lot of the reports, so it was helpful to put it in a context, to hear some new updates," Conrad said. "To hear some fiery rhetoric about the time for indictments, the time for holding people accountable. I worry that filing lawsuits will just drain the tax base of the state, or the city, or the county, but we need some individuals to be held accountable for their role as agents of government acting in individual capacities, frankly in their individual interests and harming the residents of the city."

Guyette said the ACLU was involved in helping coordinate and conduct the tests on residents' water in Flint. He said a partnership with Virginia Tech was born following the testing of water at the home of Flint resident LeeAnne Walters.

A number of groups from the Flint-area have signed on to the petition asking the EPA to take action that will decrease the danger to Flint residents' health from lead contamination in the drinking water.

A recent study by a Hurley Medical Center doctor found more children in Flint have elevated blood lead levels since Flint switched from the Detroit water system to using the Flint River as its primary water source in April 2014.

The groups include the Coalition for Clean Water, Concerned Pastors for Social Change, Water You Fighting For, Democracy Defense League Water Task Force, Flint

Water Study Team, Michigan Nurses Association, NAACP - Michigan State Conference, Michigan Chapter of the National Conference of Black Lawyers, American Civil Liberties Union of Michigan, and the Natural Resources Defense Council.

Genesee County Commissioners Brenda Clack, Jamie Curtis and Bryant Nolden, along with Genesee County Health Officer Mark Valacak, held a news conference Thursday, Oct. 1, urging residents to not drink the city's water until it is checked for lead or they have installed an approved water filter.

The warning came just before an announcement that local, state and federal officials will announce a plan for addressing concerns with lead in Flint's drinking water at a news conference Friday, Oct. 2.

An advisory from the Michigan Department of Environmental Quality said leaders will announce the plan at 1:30 p.m. at Kettering University.

Guyette said the next move in the water saga will depend on what comes Friday.

"Well, a lot of that's going to depend on what the governor has to say," Guyette said, adding that there are more questions that need to be answered.

Frustrations have mounted since the water saga unfolded more than a year ago.

An order signed by Genesee County Circuit Court Judge Archie Hayman on Aug. 17, lowered water and sewer rates and halted the city from shutting off water to customers. Since then an average of 100 fewer customers are paying their water bills.

On Thursday during a news conference honoring the Flint Farmers' Market as one of the top six great public spaces on the American Planning Association's annual "Great Places in America" list a scuffle broke out between a water protestor and a market security guard.

City of Flint Spokesman Jason Lorenz said there were a couple of protestors at the market holding up signs. Lorenz said toward the end of the presentation some of the protestors began shouting.

One woman pulled out a bullhorn and security escorted the group out. Lorenz said that is when a scuffle ensued between the woman and the security guard. He said the woman was arrested on assault and battery charges.

In an effort to relieve the frustration and struggle for city residents, a water filter program has been put in place. Women and children receiving public assistance are on the top of the list to receive free water filters.

The announcement came Thursday that the United Way of Genesee County and the city have raised $105,000 from private and public sources to purchase 5,250 water filters for Flint residents.

The filter program announcement comes a week after the director of Hurley Medical Center's pediatric residency program warned in a study that the number of young children with elevated lead in their blood has doubled since the city changed its water source from Lake Huron to the Flint River.

Details on distribution of the filters will be communicated through the Genesee County Health Department Web site as well as a hotline that is in the process of being established.

Residents, ACLU Ask EPA to Take Action on Flint Water

Rick Pluta • 13 hours ago

(MPRN-Flint) The American Civil Liberties Union and some Flint residents are asking the federal government to step in to deal with the city's water crisis.

A complaint filed with the Environmental Protection Agency seeks an order for the city and the state to stop drawing water from the Flint River and re-connect with the Detroit water system.

The switch was ordered by a state-appointed emergency manager to save money. But the Flint River's water is highly corrosive, and caused lead to leach into the city's drinking water.

"There is no level of lead in water that is safe and it's having a devastating impact on the children in the city of Flint," said Michael Steinberg, an attorney with the ACLU. "In an attempt to save money, the emergency manager in Flint, acting in collusion with the state, provided unsafe drinking water to the residents of Flint, and the results have been catastrophic."

State and city officials are expected to outline the next plans to deal with the city's water crisis as soon as tomorrow.

Budget bill add-on awaits future state funds for Flint water

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 01, 2015 at 6:21 PM, updated October 01, 2015 at 6:22 PM

FLINT, MI -- A funding mechanism aimed at the state paying for measures to reduce lead levels in Flint's drinking water has been added to a budget bill in the Michigan Senate.

Jim Ananich, a Flint Democrat and Senate minority leader, successfully sought the placeholder of $100 to the Department of Environmental Quality for emergency water services for Flint.

The amount of the placeholder is expected to be changed after the true cost of the state's contribution is known, and details of that plan could be revealed as soon as Friday, Oct. 2.

"I worked with the administration (of Gov. Rick Snyder) and my colleagues on the Republican side to put a placeholder in place so that when we determine what resources are needed ... to fix the problem, we can go from there," Ananich said after the vote.

Gov. Rick Snyder earlier this week said he expected to announce those measures by Friday after saying "There are probably some things that weren't as fully understood (as should have been) when that switch (in Flint's water source) was made."

Flint changed its drinking water source from Lake Huron to Flint River in April 2014, a decision that came as the city was being run by a state-appointed emergency manager.

The city has struggled to effectively treat that river water since, and a recent study published by a Hurley Medical Center doctor says the number of children and infants with elevated blood lead levels since the change has nearly doubled.

Experiments by Virginia Tech university point to the source of Flint's water as the culprit, showing it is about 19 times more corrosive than the Lake Huron water that had been purchased from the city of Detroit for decades.

Virginia Tech researchers have said that corrosivity, interacting with lead in city service lines, has resulted in higher lead levels in water.

City officials have asked the state for assistance ranging from lead filters for faucets to help paying the Detroit Water and Sewerage Department to reconnect Flint to the DWSD water supply again until the Karegnondi Water Authority pipeline is completed.

The pipeline is expected to be available to service the city and Genesee County at some point in 2016.

Don't drink Flint's water, Genesee County leaders warn

By Jiquanda Johnson | jjohns16@mlive.com The Flint Journal Follow on Twitter on October 01, 2015 at 6:13 PM, updated October 01, 2015 at 11:33 PM

GENESEE COUNTY, MI — Don't drink the water. That's one message Genesee County officials are pushing to residents who get their water supply from the city of Flint.

Genesee County Commissioners Brenda Clack, Jamie Curtis and Bryant Nolden, along with Genesee County Health Officer Mark Valacak, held a news conference Thursday, Oct. 1, urging residents to not drink the city's water until it is checked for lead or they have installed an approved water filter.

The commissioners declared a public health emergency and said they are hoping their declaration will move Gov. Rick Snyder to declare a state of emergency to handle Flint's water crisis.

"This falls directly on the doorstep of the governor," said Nolden. "If we look at what happened with going to the Flint River, this falls smack-dab on the emergency manager and the governor. Now, I think it's imperative that the state step up and help us fix this problem. We're just imploring that the state actively engage and look at ways we can connect to the Detroit River. ... This is a major health situation for this entire community."

Flint Mayor Dayne Walling issued a statement on the commissioners' declaration, saying Flint water customers should filter their water before drinking it.

Commissioners said they have issued various communications with Snyder's office but still haven't heard any word from the governor about the state's plans.

"Flint residents need safe, clean water, and they need accurate information about their health and their homes," said David Murray, Snyder's deputy press secretary, in a statement issued Thursday. "Gov. Snyder has an action plan that builds on existing efforts to help Flint city leaders and their residents. ... It addresses short- and long-term challenges and will keep city residents safe."

A batch of water filters is expected to arrive in the city sometime Friday, Oct. 2. The filters came from the combined efforts of the United Way, city of Flint, General Motors Foundation and a donation from the Making Our Children Smile Foundation. In total, $105,000 was donated to purchase 5,250 water filters — costing about $20 each — for Flint residents.

Valacak said he is hoping officials can start distributing the water filters as early as Friday afternoon, but they are going to focus on high-risk residents, including pregnant women and homes with children.

The county has partnered with the United Way and other community organizations, such as the University of Michigan-Flint, to help distribute the water filters. Valacak said they are looking to have details on distribution as soon as Friday morning, and updates can be found on the Health Department's website.

In addition, the Flint Department of Public Works is offering free water testing for Flint residents.

There are potentially 45,000 homes in the city that may have issues with lead. Clack, Curtis and Nolden represent the majority of the city on the county board. Nolden said his district is primarily in older areas of the city, where the infrastructure is older and residents may be at high risk for lead exposure.

On Tuesday, Sept. 29, the county issued an advisory warning the community of various health hazards associated with lead, including brain damage, stunted growth and hearing problems in children. Valacak said pregnant women and children 5 and younger are especially vulnerable.

Commissioners said they have reached out to Snyder in hopes of him declaring a state of emergency for the city but have not heard back from his office and also said his anonymous donation of 1,500 water filers nearly a month ago shows the governor's office knows there is a problem with Flint's water.

"To me, that's an admission of guilt," Curtis said. "You know there's a problem. ... We're not looking for anybody to point fingers and put the blame. ... We have lead in our water. Let's fix the problem."

Genesee County declares public health emergency

Steve Carmody, Michigan Radio • 13 hours ago

Recent studies have shown blood lead levels in Flint children have doubled, even tripled in some parts of town, since the city started using the Flint River as its drinking water source.

So today Genesee County officials declared a public health emergency.

“We often use the phrase that children are our most valuable resource … then we got to begin acting like they are,” says County Commissioner Brenda Clack.

County commission chairman Jaime Curtis says lead levels in the city of Flint’s water are threatening people’s lives.

“We’ll take water. We’ll take filters. We’ll take money. We’ll take anything to keep our people safe,” Curtis said at a news conference.

The county hopes to start distributing thousands of water filters tomorrow.

The city of Flint issued a lead advisory last week.

Flint Mayor Dayne Walling issued a statement urging people in Flint to follow the guidelines in the county’s public health declaration.

"I encourage the public to follow the guidance in the declaration to use a certified filter, have water testing done, and flush cold water for five minutes before drinking," says Walling.

Tomorrow, a "comprehensive" plan will be announced for dealing with Flint's water crisis.

Who's to blame for Flint's water crisis? Virginia Tech researcher points the finger at MDEQ

Mark Brush, Michigan Radio • 15 hours ago

Yesterday, Gov. Rick Snyder admitted that the decision to switch the city of Flint's water supply from Detroit's system over to the Flint River was not well planned.

"In terms of a mistake, what I would say is, is there are probably things that were not as fully understood as when that switch was made," Snyder said.

At the direction of the state-appointed emergency manager, the city made the switch in April 2014, and problems with the drinking water started soon after.

People complained of brown water. There were boil-water advisories after the water was found to have E. coli contamination, and the drinking water also had unsafe levels of a chlorine byproduct (total trihalomethanes).

Fast forward almost a year and a half, and now we learn some residents in the city are being exposed to unsafe levels of lead in their drinking water. Pediatricians have concluded that the water in Flint is likely poisoning kids.

How could one of Michigan's major cities be facing this problem?

Marc Edwards, a civil engineering professor from Virginia Tech University and a nationally renowned expert on water treatment, has put the blame squarely on the agency in charge of overseeing the safety of Flint's drinking water, the Michigan Department of Environmental Quality.

Edwards published a blog post yesterday in which he writes:

Given MDEQ's insistence that there is absolutely nothing wrong with Flint water, we have created a timeline that illustrates how MDEQ's mistakes and deception created the Flint water crisis in the first place.

In his timeline, Edwards says the state failed to require that the city have a corrosion-control program in place when the city switched over to Flint River water.

"What we discovered to our shock was that they switched to a new water source that was obviously very corrosive, meaning it would eat up the lead pipe and iron pipe and essentially put the metals into the water, without controlling the corrosion," Edwards says. "And this is a horrible idea in a city full of lead plumbing and lead pipe like Flint."

Edwards says current estimates are that Flint has about 15,000 drinking water service lines made of lead.

How dangerous metals can get into drinking water

When water flows through copper and lead pipes, it can take up some of the metal and make the water unsafe. To control for this problem, the Environmental Protection Agency has what's called a "lead and copper rule."

The purpose of the rule is listed in this "quick reference guide:"

Protect public health by minimizing lead (Pb) and copper (Cu) levels in drinking water, primarily by reducing water corrosivity. Pb and Cu enter drinking water mainly from corrosion of Pb and Cu containing plumbing materials.

To keep these metals from leaching into drinking water, municipal treatment plants can change the water chemistry to lower the water's ability to corrode these pipes.

It's called "corrosion control," and Edwards says the Michigan Department of Environmental Quality covered up the fact that Flint had no corrosion control program in place.

"Before you switch to a new water source, six months to a year ahead of time, you are supposed to do laboratory experiments to determine the corrosivity of the water," says Edwards. "And the chemistry – the pH, the alkalinity, and the phosphate that you need to make sure that the lead stays on the pipes and out of the water."

Edwards contends that the new water system had to have a "corrosion control" plan in place so that "you're not doing an uncontrolled human experiment on a city's population."

According to emails obtained by the ACLU of Michigan, a state MDEQ official, Stephen Busch, responded to a request from EPA Region 5, the federal agency that oversees MDEQ, that the new water system in Flint did have a corrosion control program in place.

That exchange occurred in February of this year.

In April, according to the emails, the EPA Region 5 official later found out that was not true. Flint, it turns out, did not have a corrosion-control program in place.

From the emails:

Pat Cook [of MDEQ] has confirmed that following the disconnection from Detroit, Flint has not been operating any corrosion control treatment, which is very concerning given the likelihood of LSLs [lead service lines] in the city.

The state has maintained that it is not required under the EPA's lead and copper rule to have a corrosion-control plan in place until two rounds of testing are completed to determine what that plan looks like.

More from Michigan Radio's Lindsey Smith:

At face value, the EPA rules are clear, all water systems that serve more than 50,000 people must have some kind of corrosion control.

But when you switch water sources, there is apparently some room for interpretation.

In approving updates to this federal regulation in 2000, the EPA noted that "water systems need to make treatment changes, on occasion, to react to changing circumstances."

In these cases, the rule does not “prevent a state from approving treatment changes,” but it’s not entirely clear if the state can approve having zero corrosion-control treatment.

As Edwards understands it, the EPA should have acted once the agency found out the state had no corrosion-control plan in place in Flint.

“If there was ever a case where [the] EPA should exert emergency powers and take primacy away from an agency, this is it,” he said.

Edwards says the city was also not conducting tests for lead and copper properly.

The point of the lead and copper rule is to make sure cities are sampling homes that are high risk – that is, homes serviced by lead pipe.

An ACLU of Michigan investigation found that the city did not know whether it was testing homes serviced by lead pipes.

In this video, Michael Glasgow, the utilities manager for Flint, indicated the city doesn't know where the lead pipes are.

Our Editorial: Get Flint residents drinkable water

The Detroit News 11:32 p.m. EDT October 1, 2015

It doesn't matter if official reports say Flint's water is safe to drink. If residents turn on the tap and the water that comes out is oddly colored — or any color but clear — and stinky, they aren't going to drink it. Nor should they have to.

Flint water customers have been complaining about the smell, taste and color of their water since the spring of 2014, after the city cut its ties to the Detroit Water system and started treating and delivering its own supply.

The move saved Flint about $12 million a year, not an insignificant amount for a city that is under emergency financial management by the state of Michigan because of its shaky finances.

But cheaper water is no bargain if it is undrinkable. And residents of Flint are making a good case that the water the city provides is unfit for human consumption.

Water in the Detroit system is pulled from the depths of Lake Huron and has few contaminants that must be cleansed away at the treatment plant. Flint, for now at least, gets its water from the Flint River, which has endured a century or more of industrial and residential pollution.

Cleansing the river water is a more challenging task, and one Flint has yet to master. Residents have received a string of "boil water" notices due to mistakes made at the plant.

Most worrisome, however, is a new report that indicates elevated levels of lead in Flint children under the age of 5. Lead has a detrimental impact on development, and its increased presence in Flint's kids should not be taken lightly.

The state Department of Environmental Quality insists the water has been thoroughly tested and is safe.

But, again, residents who see and smell foul water coming from their tap can be forgiven if they doubt those assurances.

Gov. Rick Snyder, working with an unnamed private donor, recently distributed about 1,500 filters to Flint water customers. The filters remove chemical compounds as well as lead.

That seems a good temporary solution at least. But thousands more are needed. State Sen. Jim Ananich, a Democrat from Flint, is asking the state to find the funds for 15,000 filters to distribute to all water system customers.

That is a reasonable request, and may bridge residents until next year, when the city is expected to connect to a new regional water pipeline from Lake Huron.

The other option is to reconnect to the Detroit water system.

Whatever choice is made, the solution should be put in place quickly. If the elevated lead levels discovered by pediatricians at the Hurley Medical Center are linked to the water supply, then this is a public health emergency that demands an urgent response.

Flint residents are paying for water, and have the right to expect it to be clean and drinkable. They should not have to spend additional money each month to purchase bottled water.

The decision to disconnect Flint from Detroit water lines was made under the state's watch. The state has a responsibility to find a fix, and soon.

Efforts to get the lead out of Flint's water awash in finger-pointing

BY JACK LESSENBERRY

BLADE OMBUDSMAN

FLINT, Mich. — Residents here haven't yet marched on city hall or the governor's office with pitchforks and blazing torches. But if they did, a lot of people might not blame them.

Flint has plenty of troubles: devastating job and population losses, plummeting property values, and a succession of emergency managers over the past four years.

The latest outrage is about water. Water that is discolored and foul-smelling. Water that at first had too much bacteria and then too much disinfectant.

And water that now seems to be causing lead poisoning in some of Flint's children. One woman, whose husband works as a policy planner for city government, said her spouse was "in tears as a new father himself when an irate resident came in with her premature, lead-poisoned baby."

Flint's water saga goes back to last year, when officials announced that their cash-strapped city could no longer afford to buy water from Detroit.

They announced they would join a new consortium, the Karegnondi Water Authority, which would supply purified water from Lake Huron. But Karegnondi's operation won't be up and running until sometime the following year.

So Flint officials announced that in the meantime, they would supply residents with treated water from the Flint River. But that turned into a disaster from almost day one. There were reports that the water was discolored and foul-tasting.

When tests showed that the water was dangerously contaminated with bacteria, including the infamous E. coli, the city pumped chlorine into the water.

That backfired too: In January, residents were told their water didn't meet federal safety standards, this time because of the chlorine.

While it may have killed the bacteria, it left the water with high levels of trihalomethane (TTHM), which is thought to increase the chances of developing cancer.

Average levels of TTHM didn't become acceptable until late this summer. Then Flint had a terrifying new problem: lead poisoning.

Last week, a study by physicians at Hurley Medical Center in Flint showed that the tap water in Flint has resulted in significantly elevated levels in the blood of the city's children. The scientists said the lead isn't actually in the water, but that the river water itself was more corrosive than the lake water Flint had been buying from Detroit.

A team from Virginia Tech tested samples last month from 300 homes, and found what it called "seriously" high levels of lead. The Hurley study found the percentage of children with seriously elevated lead levels had almost doubled.

That got politicians' attention. Mayor Dayne Walling advised residents to use only cold water, let it run from the tap for five minutes, and buy a filter for lead removal. The mayor also asked Gov. Rick Snyder to come up with $30 million to fix the water system and replace lead pipes.

City officials say about half the customers in Flint may be facing a problem, because the transmission lines connecting them to city water mains are made with lead.

The mayor's request for money from the governor wasn't good enough for the editorial board of the Flint Journal, the city's newspaper. When the news of lead poisoning surfaced, it ran an editorial saying "it's time to abandon the Flint River" as a drinking water source.

"We call on the governor to make this right for Flint citizens by brokering a return to Detroit water that won't bankrupt the city of Flint," the editorial said. It added: "Flint is in a crisis that was created in no small part by Snyder's hand-picked emergency manager, and it is Snyder's job to fix this mess."

Yet the governor has shown no signs of doing any such thing.

Pat Clawson, a longtime Flint area resident and former investigative reporter, thinks his city's plight should be a national scandal. "They are poisoning the people with this water — poisoning them, and that's what the doctors call it among themselves," he told me.

He puts the lion's share of the blame on Mayor Walling, who he says "was involved in planning and promoting the switch to Flint River water from the start."

But Mr. Clawson says there is plenty of blame to go around: "I believe there is criminal culpability on the part of public officials for causing and concealing this crisis."

He urged the federal and state governments to convene grand juries to investigate. Whether that will happen is anyone's guess. Meanwhile, the agony continues for the 99,000 folks who still live in the once-prosperous city of Flint.

Jack Lessenberry, a member of the journalism faculty at Wayne State University in Detroit and The Blade's ombudsman, writes on issues and people in Michigan.

Public health emergency declared due to lead in Flint water

By COREY WILLIAMS, Associated Press

DETROIT (AP) - A public health emergency has been declared in cash-strapped Flint after tests showed the Michigan city's water supply is causing elevated levels of lead in children and following months of complaints about the smell and taste.

Gov. Rick Snyder this week questioned the switch to the Flint River from the Detroit water system in 2014, a decision that was made as a cost-saving move while a new regional pipeline is built to Lake Huron.

And on Thursday, the Genesee County health department declared a public health emergency, recommending that people not drink the water unless it has been filtered and tested to rule out elevated levels of lead. More steps will be announced Friday.

The problem: Although the river water is treated, it is corrosive and releasing lead from old plumbing in thousands of homes.

A coalition of residents and national groups petitioned the U.S. Environmental Protection Agency to order the state to reconnect Flint to Detroit water.

"As evidenced by the ongoing poisoning of the children of Flint, it's time for the EPA to take immediate action to provide us with a safe water source," LeeAnne Walters, a Flint parent and member of the Water You Fighting For group, said Thursday.

Flint, 60 miles north of Detroit, is among a number of communities that have complained about the rising cost of Detroit's water and sewerage service, which serves about 4 million people in southeastern Michigan. It opted to temporarily use the Flint River until a new line to Port Huron opens in 2016 at an annual cost of $12.5 million.

The decision to break away from the Detroit system was made while a Snyder-appointed emergency manager was running the long-struggling city, which had reached a financial crisis.

"In terms of a mistake, what I would say is we found there are probably things that weren't as fully understood when that switch was made," the governor said Wednesday.

His comments marked a significant shift. In July, a spokesman for the state's Department of Environmental Quality, Brad Wurfel, recommended home tests but added: "Anyone who is concerned about lead in the drinking water in Flint can relax."

Residents are unhappy with the taste, smell and appearance of water from the Flint River and have reported rashes, hair loss and other health concerns that they attribute to it. A General Motors plant stopped using the water because it was causing excessive rust.

Despite the complaints, city officials had said state tests showed the water met federal safety guidelines.

But in September, Virginia Tech researchers released a report saying Flint's water was creating a health threat in old homes that have lead pipes or pipes fused with lead solder. And doctors last week reported high levels of lead in local children's blood samples, also blaming water pipes.

Flint officials say they know which homes have risky pipes but that the information is on about 45,000 index cards and difficult to retrieve.

The city is now telling residents to use only cold water for drinking, cooking and making baby formula, and recommending they use the certified filters. The General Motors Foundation, the local United Way and others have given at least $105,000 to buy filters for 5,000 residents.

State to announce Flint water action plan Friday at Kettering

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 01, 2015 at 8:12 PM, updated October 01, 2015 at 11:12 PM

FLINT, MI — Local, state and federal officials are set to announce a plan for addressing concerns with lead in Flint's drinking water at a news conference Friday, Oct. 2.

An advisory from the Michigan Department of Environmental Quality said leaders will announce the plan at 1:30 p.m. at Kettering University.

The news conference comes after weeks of worrisome news about rising levels of lead in the city's tap water, documented by researchers from Virginia Tech university and a study by a Hurley Medical Center doctor that showed the number of children in the city with elevated blood levels nearly doubled after the city started using the Flint River as its water source in 2014.

Brad Wurfel, director of communications for the DEQ, said Thursday, Oct. 1, that Gov. Rick Snyder cannot attend the news conference.

Snyder said earlier this week that he expected state officials to announce plans to deal with the lead in water issue by Friday, saying, "There are probably some things that weren't as fully understood when that switch was made."

The state oversees water quality in Flint, and state-appointed emergency managers were running city government when decisions were made not to negotiate a short-term agreement to continue buying Lake Huron water from Detroit and to instead use the river as a water source.

Although the city is not currently in violation of the Safe Drinking Water Act, bacteria, the level of total trihalomethanes and lead have been problems in the water system since then.

Among those scheduled to attend the news conference are Mayor Dayne Walling; Harvey Hollins, director of the state Office of Urban Initiatives; Dan Wyant, director of the Michigan DEQ; Nick Lyon, director of the Michigan Department of Health and Human Services; and Dr. Eden Wells, chief medical executive of the state Department of Health and Human Services, the news release said.

Wurfel would not discuss the plan in advance of the news conference, but officials in local, state and the federal government have called for a variety of actions in recent weeks.

Among them: Funding for home water filters, additional testing of city water and reconnection of Flint to the Detroit water system.

"We're looking forward to coming to Flint. We recognize lead is a concern in the city," Wurfel said.

Petition launched for EPA intervention in Flint water crisis

By Amanda Emery | aemery@mlive.com The Flint Journal Follow on Twitter on October 02, 2015 at 8:20 AM, updated October 02, 2015 at 8:21 AM

FLINT, MI -- As the American Civil Liberties Union of Michigan joined a petition urging an immediate federal response to Flint's water crisis, the Greater Flint chapter held its board meeting Thursday to update residents on Flint's water situation.

The petition urges the U.S. Environmental Protection Agency to order Flint to reconnect to the Detroit Water and Sewerage Department system, among other requests.

The board meeting was held Thursday, Oct. 1 at the IINN's Great Lakes Center, 4800 South Saginaw Street in Flint. About 15 people attended the meeting as ACLU of Michigan investigative reporter Curt Guyette talked about the investigation into lead in the water and what's to come.

Woodside Church Pastor Deborah Conrad attended the meeting to get updates on the water situation. Conrad said she is looking to see what can be done to make it better.

"I've been following a lot of the reports, so it was helpful to put it in a context, to hear some new updates," Conrad said. "To hear some fiery rhetoric about the time for indictments, the time for holding people accountable. I worry that filing lawsuits will just drain the tax base of the state, or the city, or the county, but we need some individuals to be held accountable for their role as agents of government acting in individual capacities, frankly in their individual interests and harming the residents of the city."

Guyette said the ACLU was involved in helping coordinate and conduct the tests on residents' water in Flint. He said a partnership with Virginia Tech was born following the testing of water at the home of Flint resident LeeAnne Walters.

A number of groups from the Flint-area have signed on to the petition asking the EPA to take action that will decrease the danger to Flint residents' health from lead contamination in the drinking water.

A recent study by a Hurley Medical Center doctor found more children in Flint have elevated blood lead levels since Flint switched from the Detroit water system to using the Flint River as its primary water source in April 2014.

The groups include the Coalition for Clean Water, Concerned Pastors for Social Change, Water You Fighting For, Democracy Defense League Water Task Force, Flint Water Study Team, Michigan Nurses Association, NAACP - Michigan State Conference, Michigan Chapter of the National Conference of Black Lawyers, American Civil Liberties Union of Michigan, and the Natural Resources Defense Council.

Genesee County Commissioners Brenda Clack, Jamie Curtis and Bryant Nolden, along with Genesee County Health Officer Mark Valacak, held a news conference Thursday, Oct. 1, urging residents to not drink the city's water until it is checked for lead or they have installed an approved water filter.

The warning came just before an announcement that local, state and federal officials will announce a plan for addressing concerns with lead in Flint's drinking water at a news conference Friday, Oct. 2.

An advisory from the Michigan Department of Environmental Quality said leaders will announce the plan at 1:30 p.m. at Kettering University.

Guyette said the next move in the water saga will depend on what comes Friday.

"Well, a lot of that's going to depend on what the governor has to say," Guyette said, adding that there are more questions that need to be answered.

Frustrations have mounted since the water saga unfolded more than a year ago.

An order signed by Genesee County Circuit Court Judge Archie Hayman on Aug. 17, lowered water and sewer rates and halted the city from shutting off water to customers. Since then an average of 100 fewer customers are paying their water bills.

On Thursday during a news conference honoring the Flint Farmers' Market as one of the top six great public spaces on the American Planning Association's annual "Great Places in America" list a scuffle broke out between a water protestor and a market security guard.

City of Flint Spokesman Jason Lorenz said there were a couple of protestors at the market holding up signs. Lorenz said toward the end of the presentation some of the protestors began shouting.

One woman pulled out a bullhorn and security escorted the group out. Lorenz said that is when a scuffle ensued between the woman and the security guard. He said the woman was arrested on assault and battery charges.

In an effort to relieve the frustration and struggle for city residents, a water filter program has been put in place. Women and children receiving public assistance are on the top of the list to receive free water filters.

The announcement came Thursday that the United Way of Genesee County and the city have raised $105,000 from private and public sources to purchase 5,250 water filters for Flint residents.

The filter program announcement comes a week after the director of Hurley Medical Center's pediatric residency program warned in a study that the number of young children with elevated lead in their blood has doubled since the city changed its water source from Lake Huron to the Flint River.

Details on distribution of the filters will be communicated through the Genesee County Health Department Web site as well as a hotline that is in the process of being established.

Residents, ACLU Ask EPA to Take Action on Flint Water

Rick Pluta • 13 hours ago

(MPRN-Flint) The American Civil Liberties Union and some Flint residents are asking the federal government to step in to deal with the city's water crisis.

A complaint filed with the Environmental Protection Agency seeks an order for the city and the state to stop drawing water from the Flint River and re-connect with the Detroit water system.

The switch was ordered by a state-appointed emergency manager to save money. But the Flint River's water is highly corrosive, and caused lead to leach into the city's drinking water.

“There is no level of lead in water that is safe and it’s having a devastating impact on the children in the city of Flint,” said Michael Steinberg, an attorney with the ACLU. “In an attempt to save money, the emergency manager in Flint, acting in collusion with the state, provided unsafe drinking water to the residents of Flint, and the results have been catastrophic.”

State and city officials are expected to outline the next plans to deal with the city’s water crisis as soon as tomorrow.

Budget bill add-on awaits future state funds for Flint water

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 01, 2015 at 6:21 PM, updated October 01, 2015 at 6:22 PM

FLINT, MI -- A funding mechanism aimed at the state paying for measures to reduce lead levels in Flint's drinking water has been added to a budget bill in the Michigan Senate.

Jim Ananich, a Flint Democrat and Senate minority leader, successfully sought the placeholder of $100 to the Department of Environmental Quality for emergency water services for Flint.

The amount of the placeholder is expected to be changed after the true cost of the state's contribution is known, and details of that plan could be revealed as soon as Friday, Oct. 2.

"I worked with the administration (of Gov. Rick Snyder) and my colleagues on the Republican side to put a placeholder in place so that when we determine what resources are needed ... to fix the problem, we can go from there," Ananich said after the vote.

Gov. Rick Snyder earlier this week said he expected to announce those measures by Friday after saying "There are probably some things that weren't as fully understood (as should have been) when that switch (in Flint's water source) was made."

Flint changed its drinking water source from Lake Huron to Flint River in April 2014, a decision that came as the city was being run by a state-appointed emergency manager.

The city has struggled to effectively treat that river water since, and a recent study published by a Hurley Medical Center doctor says the number of children and infants with elevated blood lead levels since the change has nearly doubled.

Experiments by Virginia Tech university point to the source of Flint's water as the culprit, showing it is about 19 times more corrosive than the Lake Huron water that had been purchased from the city of Detroit for decades.

Virginia Tech researchers have said that corrosivity, interacting with lead in city service lines, has resulted in higher lead levels in water.

City officials have asked the state for assistance ranging from lead filters for faucets to help paying the Detroit Water and Sewerage Department to reconnect Flint to the DWSD water supply again until the Karegnondi Water Authority pipeline is completed.

The pipeline is expected to be available to service the city and Genesee County at some point in 2016.

Don't drink Flint's water, Genesee County leaders warn

By Jiquanda Johnson | jjohns16@mlive.com The Flint Journal Follow on Twitter on October 01, 2015 at 6:13 PM, updated October 01, 2015 at 11:33 PM

GENESEE COUNTY, MI — Don't drink the water. That's one message Genesee County officials are pushing to residents who get their water supply from the city of Flint.

Genesee County Commissioners Brenda Clack, Jamie Curtis and Bryant Nolden, along with Genesee County Health Officer Mark Valacak, held a news conference Thursday, Oct. 1, urging residents to not drink the city's water until it is checked for lead or they have installed an approved water filter.

The commissioners declared a public health emergency and said they are hoping their declaration will move Gov. Rick Snyder to declare a state of emergency to handle Flint's water crisis.

"This falls directly on the doorstep of the governor," said Nolden. "If we look at what happened with going to the Flint River, this falls smack-dab on the emergency manager and the governor. Now, I think it's imperative that the state step up and help us fix this problem. We're just imploring that the state actively engage and look at ways we can connect to the Detroit River. ... This is a major health situation for this entire community."

Flint Mayor Dayne Walling issued a statement on the commissioners' declaration, saying Flint water customers should filter their water before drinking it.

Commissioners said they have issued various communications with Snyder's office but still haven't heard any word from the governor about the state's plans.

"Flint residents need safe, clean water, and they need accurate information about their health and their homes," said David Murray, Snyder's deputy press secretary, in a statement issued Thursday. "Gov. Snyder has an action plan that builds on existing efforts to help Flint city leaders and their residents. ... It addresses short- and long-term challenges and will keep city residents safe."

A batch of water filters is expected to arrive in the city sometime Friday, Oct. 2. The filters came from the combined efforts of the United Way, city of Flint, General Motors Foundation and a donation from the Making Our Children Smile Foundation. In total, $105,000 was donated to purchase 5,250 water filters — costing about $20 each — for Flint residents.

Valacak said he is hoping officials can start distributing the water filters as early as Friday afternoon, but they are going to focus on high-risk residents, including pregnant women and homes with children.

The county has partnered with the United Way and other community organizations, such as the University of Michigan-Flint, to help distribute the water filters. Valacak said they are looking to have details on distribution as soon as Friday morning, and updates can be found on the Health Department's website.

In addition, the Flint Department of Public Works is offering free water testing for Flint residents.

There are potentially 45,000 homes in the city that may have issues with lead. Clack, Curtis and Nolden represent the majority of the city on the county board. Nolden said his district is primarily in older areas of the city, where the infrastructure is older and residents may be at high risk for lead exposure.

On Tuesday, Sept. 29, the county issued an advisory warning the community of various health hazards associated with lead, including brain damage, stunted growth and hearing problems in children. Valacak said pregnant women and children 5 and younger are especially vulnerable.

Commissioners said they have reached out to Snyder in hopes of him declaring a state of emergency for the city but have not heard back from his office and also said his anonymous donation of 1,500 water filers nearly a month ago shows the governor's office knows there is a problem with Flint's water.

"To me, that's an admission of guilt," Curtis said. "You know there's a problem. ... We're not looking for anybody to point fingers and put the blame. ... We have lead in our water. Let's fix the problem."

Genesee County declares public health emergency

Steve Carmody, Michigan Radio • 13 hours ago

Recent studies have shown blood lead levels in Flint children have doubled, even tripled in some parts of town, since the city started using the Flint River as its drinking water source.

So today Genesee County officials declared a public health emergency.

“We often use the phrase that children are our most valuable resource … then we got to begin acting like they are,” says County Commissioner Brenda Clack.

County commission chairman Jaime Curtis says lead levels in the city of Flint’s water are threatening people’s lives.

“We’ll take water. We’ll take filters. We’ll take money. We’ll take anything to keep our people safe,” Curtis said at a news conference.

The county hopes to start distributing thousands of water filters tomorrow.

The city of Flint issued a lead advisory last week.

Flint Mayor Dayne Walling issued a statement urging people in Flint to follow the guidelines in the county’s public health declaration.

"I encourage the public to follow the guidance in the declaration to use a certified filter, have water testing done, and flush cold water for five minutes before drinking,” says Walling.

Tomorrow, a "comprehensive" plan will be announced for dealing with Flint’s water crisis.

Who's to blame for Flint's water crisis? Virginia Tech researcher points the finger at MDEQ

Mark Brush, Michigan Radio • 15 hours ago

Yesterday, Gov. Rick Snyder admitted that the decision to switch the city of Flint's water supply from Detroit's system over to the Flint River was not well planned.

“In terms of a mistake, what I would say is, is there are probably things that were not as fully understood as when that switch was made,” Snyder said.

At the direction of the state-appointed emergency manager, the city made the switch in April 2014, and problems with the drinking water started soon after.

People complained of brown water. There were boil-water advisories after the water was found to have E. coli contamination, and the drinking water also had unsafe levels of a chlorine byproduct (total trihalomethanes).

Fast forward almost a year and a half, and now we learn some residents in the city are being exposed to unsafe levels of lead in their drinking water. Pediatricians have concluded that the water in Flint is likely poisoning kids.

How could one of Michigan’s major cities be facing this problem?

Marc Edwards, a civil engineering professor from Virginia Tech University and a nationally renowned expert on water treatment, has put the blame squarely on the agency in charge of overseeing the safety of Flint's drinking water, the Michigan Department of Environmental Quality.

Edwards published a blog post yesterday in which he writes:

Given MDEQ's insistence that there is absolutely nothing wrong with Flint water, we have created a timeline that illustrates how MDEQ's mistakes and deception created the Flint water crisis in the first place.

In his timeline, Edwards says the state failed to require that the city have a corrosion-control program in place when the city switched over to Flint River water.

"What we discovered to our shock was that they switched to a new water source that was obviously very corrosive, meaning it would eat up the lead pipe and iron pipe and essentially put the metals into the water, without controlling the corrosion," Edwards says. "And this is a horrible idea in a city full of lead plumbing and lead pipe like Flint."

Edwards says current estimates are that Flint has about 15,000 drinking water service lines made of lead.

How dangerous metals can get into drinking water

When water flows through copper and lead pipes, it can take up some of the metal and make the water unsafe. To control for this problem, the Environmental Protection Agency has what's called a "lead and copper rule."

The purpose of the rule is listed in this "quick reference guide:"

Protect public health by minimizing lead (Pb) and copper (Cu) levels in drinking water, primarily by reducing water corrosivity. Pb and Cu enter drinking water mainly from corrosion of Pb and Cu containing plumbing materials.

To keep these metals from leaching into drinking water, municipal treatment plants can change the water chemistry to lower the water's ability to corrode these pipes.

It's called "corrosion control," and Edwards says the Michigan Department of Environmental Quality covered up the fact that Flint had no corrosion control program in place.

"Before you switch to a new water source, six months to a year ahead of time, you are supposed to do laboratory experiments to determine the corrosivity of the water," says Edwards. "And the chemistry – the pH, the alkalinity, and the phosphate that you need to make sure that the lead stays on the pipes and out of the water."

Edwards contends that the new water system had to have a "corrosion control" plan in place so that "you're not doing an uncontrolled human experiment on a city's population."

According to emails obtained by the ACLU of Michigan, a state MDEQ official, Stephen Busch, responded to a request from EPA Region 5, the federal agency that oversees MDEQ, that the new water system in Flint did have a corrosion control program in place.

That exchange occurred in February of this year.

In April, according to the emails, the EPA Region 5 official later found out that was not true. Flint, it turns out, did not have a corrosion-control program in place.

From the emails:

Pat Cook [of MDEQ] has confirmed that following the disconnection from Detroit, Flint has not been operating any corrosion control treatment, which is very concerning given the likelihood of LSLs [lead service lines] in the city.

The state has maintained that it is not required under the EPA's lead and copper rule to have a corrosion-control plan in place until two rounds of testing are completed to determine what that plan looks like.

More from Michigan Radio's Lindsey Smith:

At face value, the EPA rules are clear, all water systems that serve more than 50,000 people must have some kind of corrosion control.

But when you switch water sources, there is apparently some room for interpretation.

In approving updates to this federal regulation in 2000, the EPA noted that "water systems need to make treatment changes, on occasion, to react to changing circumstances."

In these cases, the rule does not "prevent a state from approving treatment changes," but it's not entirely clear if the state can approve having zero corrosion-control treatment.

As Edwards understands it, the EPA should have acted once the agency found out the state had no corrosion-control plan in place in Flint.

"If there was ever a case where [the] EPA should exert emergency powers and take primacy away from an agency, this is it," he said.

Edwards says the city was also not conducting tests for lead and copper properly.

The point of the lead and copper rule is to make sure cities are sampling homes that are high risk – that is, homes serviced by lead pipe.

An ACLU of Michigan investigation found that the city did not know whether it was testing homes serviced by lead pipes.

In this video, Michael Glasgow, the utilities manager for Flint, indicated the city doesn't know where the lead pipes are.

Our Editorial: Get Flint residents drinkable water

The Detroit News 11:32 p.m. EDT October 1, 2015

It doesn't matter if official reports say Flint's water is safe to drink. If residents turn on the tap and the water that comes out is oddly colored — or any color but clear — and stinky, they aren't going to drink it. Nor should they have to.

Flint water customers have been complaining about the smell, taste and color of their water since the spring of 2014, after the city cut its ties to the Detroit Water system and started treating and delivering its own supply.

The move saved Flint about $12 million a year, not an insignificant amount for a city that is under emergency financial management by the state of Michigan because of its shaky finances.

But cheaper water is no bargain if it is undrinkable. And residents of Flint are making a good case that the water the city provides is unfit for human consumption.

Water in the Detroit system is pulled from the depths of Lake Huron and has few contaminants that must be cleansed away at the treatment plant. Flint, for now at least, gets its water from the Flint River, which has endured a century or more of industrial and residential pollution.

Cleansing the river water is a more challenging task, and one Flint has yet to master. Residents have received a string of “boil water” notices due to mistakes made at the plant.

Most worrisome, however, is a new report that indicates elevated levels of lead in Flint children under the age of 5. Lead has a detrimental impact on development, and its increased presence in Flint’s kids should not be taken lightly.

The state Department of Environmental Quality insists the water has been thoroughly tested and is safe.

But, again, residents who see and smell foul water coming from their tap can be forgiven if they doubt those assurances.

Gov. Rick Snyder, working with an unnamed private donor, recently distributed about 1,500 filters to Flint water customers. The filters remove chemical compounds as well as lead.

That seems a good temporary solution at least. But thousands more are needed. State Sen. Jim Ananich, a Democrat from Flint, is asking the state to find the funds for 15,000 filters to distribute to all water system customers.

That is a reasonable request, and may bridge residents until next year, when the city is expected to connect to a new regional water pipeline from Lake Huron.

The other option is to reconnect to the Detroit water system.

Whatever choice is made, the solution should be put in place quickly. If the elevated lead levels discovered by pediatricians at the Hurley Medical Center are linked to the water supply, then this is a public health emergency that demands an urgent response.

Flint residents are paying for water, and have the right to expect it to be clean and drinkable. They should not have to spend additional money each month to purchase bottled water.

The decision to disconnect Flint from Detroit water lines was made under the state's watch. The state has a responsibility to find a fix, and soon.

Efforts to get the lead out of Flint's water awash in finger-pointing

BY JACK LESSENBERRY

BLADE OMBUDSMAN

FLINT, Mich. — Residents here haven't yet marched on city hall or the governor's office with pitchforks and blazing torches. But if they did, a lot of people might not blame them.

Flint has plenty of troubles: devastating job and population losses, plummeting property values, and a succession of emergency managers over the past four years.

The latest outrage is about water. Water that is discolored and foul-smelling. Water that at first had too much bacteria and then too much disinfectant.

And water that now seems to be causing lead poisoning in some of Flint's children. One woman, whose husband works as a policy planner for city government, said her spouse was "in tears as a new father himself when an irate resident came in with her premature, lead-poisoned baby."

Flint's water saga goes back to last year, when officials announced that their cash-strapped city could no longer afford to buy water from Detroit.

They announced they would join a new consortium, the Karegnondi Water Authority, which would supply purified water from Lake Huron. But Karegnondi's operation won't be up and running until sometime the following year.

So Flint officials announced that in the meantime, they would supply residents with treated water from the Flint River. But that turned into a disaster from almost day one. There were reports that the water was discolored and foul-tasting.

When tests showed that the water was dangerously contaminated with bacteria, including the infamous E. coli, the city pumped chlorine into the water.

That backfired too: In January, residents were told their water didn't meet federal safety standards, this time because of the chlorine.

While it may have killed the bacteria, it left the water with high levels of trihalomethane (TTHM), which is thought to increase the chances of developing cancer.

Average levels of TTHM didn't become acceptable until late this summer. Then Flint had a terrifying new problem: lead poisoning.

Last week, a study by physicians at Hurley Medical Center in Flint showed that the tap water in Flint has resulted in significantly elevated levels in the blood of the city's children. The scientists said the lead isn't actually in the water, but that the river water itself was more corrosive than the lake water Flint had been buying from Detroit.

A team from Virginia Tech tested samples last month from 300 homes, and found what it called "seriously" high levels of lead. The Hurley study found the percentage of children with seriously elevated lead levels had almost doubled.

That got politicians' attention. Mayor Dayne Walling advised residents to use only cold water, let it run from the tap for five minutes, and buy a filter for lead removal. The mayor also asked Gov. Rick Snyder to come up with $30 million to fix the water system and replace lead pipes.

City officials say about half the customers in Flint may be facing a problem, because the transmission lines connecting them to city water mains are made with lead.

The mayor’s request for money from the governor wasn’t good enough for the editorial board of the Flint Journal, the city’s newspaper. When the news of lead poisoning surfaced, it ran an editorial saying “it’s time to abandon the Flint River” as a drinking water source.

“We call on the governor to make this right for Flint citizens by brokering a return to Detroit water that won’t bankrupt the city of Flint,” the editorial said. It added: “Flint is in a crisis that was created in no small part by Snyder’s hand-picked emergency manager, and it is Snyder’s job to fix this mess.”

Yet the governor has shown no signs of doing any such thing.

Pat Clawson, a longtime Flint area resident and former investigative reporter, thinks his city’s plight should be a national scandal. “They are poisoning the people with this water — poisoning them, and that’s what the doctors call it among themselves,” he told me.

He puts the lion’s share of the blame on Mayor Walling, who he says “was involved in planning and promoting the switch to Flint River water from the start.”

But Mr. Clawson says there is plenty of blame to go around: “I believe there is criminal culpability on the part of public officials for causing and concealing this crisis.”

He urged the federal and state governments to convene grand juries to investigate. Whether that will happen is anyone’s guess. Meanwhile, the agony continues for the 99,000 folks who still live in the once-prosperous city of Flint.

Jack Lessenberry, a member of the journalism faculty at Wayne State University in Detroit and The Blade’s ombudsman, writes on issues and people in Michigan.

http://www.wtvm.com/story/30170601/public-health-emergency-declared-due-to-lead-in-flint-water

Public health emergency declared due to lead in Flint water

By COREY WILLIAMS, Associated Press

DETROIT (AP) - A public health emergency has been declared in cash-strapped Flint after tests showed the Michigan city's water supply is causing elevated levels of lead in children and following months of complaints about the smell and taste.

Gov. Rick Snyder this week questioned the switch to the Flint River from the Detroit water system in 2014, a decision that was made as a cost-saving move while a new regional pipeline is built to Lake Huron.

And on Thursday, the Genesee County health department declared a public health emergency, recommending that people not drink the water unless it has been filtered and tested to rule out elevated levels of lead. More steps will be announced Friday.

The problem: Although the river water is treated, it is corrosive and releasing lead from old plumbing in thousands of homes.

A coalition of residents and national groups petitioned the U.S. Environmental Protection Agency to order the state to reconnect Flint to Detroit water.

"As evidenced by the ongoing poisoning of the children of Flint, it's time for the EPA to take immediate action to provide us with a safe water source," LeeAnne Walters, a Flint parent and member of the Water You Fighting For group, said Thursday.

Flint, 60 miles north of Detroit, is among a number of communities that have complained about the rising cost of Detroit's water and sewerage service, which serves about 4 million people in southeastern Michigan. It opted to temporarily use the Flint River until a new line to Port Huron opens in 2016 at an annual cost of $12.5 million.

The decision to break away from the Detroit system was made while a Snyder-appointed emergency manager was running the long-struggling city, which had reached a financial crisis.

"In terms of a mistake, what I would say is we found there are probably things that weren't as fully understood when that switch was made," the governor said Wednesday.

His comments marked a significant shift. In July, a spokesman for the state's Department of Environmental Quality, Brad Wurfel, recommended home tests but added: "Anyone who is concerned about lead in the drinking water in Flint can relax."

Residents are unhappy with the taste, smell and appearance of water from the Flint River and have reported rashes, hair loss and other health concerns that they attribute to it. A General Motors plant stopped using the water because it was causing excessive rust.

Despite the complaints, city officials had said state tests showed the water met federal safety guidelines.

But in September, Virginia Tech researchers released a report saying Flint's water was creating a health threat in old homes that have lead pipes or pipes fused with lead solder. And doctors last week reported high levels of lead in local children's blood samples, also blaming water pipes.

Flint officials say they know which homes have risky pipes but that the information is on about 45,000 index cards and difficult to retrieve.

The city is now telling residents to use only cold water for drinking, cooking and making baby formula, and recommending they use the certified filters. The General Motors Foundation, the local United Way and others have given at least $105,000 to buy filters for 5,000 residents.

State to announce Flint water action plan Friday at Kettering

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 01, 2015 at 8:12 PM, updated October 01, 2015 at 11:12 PM

FLINT, MI — Local, state and federal officials are set to announce a plan for addressing concerns with lead in Flint's drinking water at a news conference Friday, Oct. 2.

An advisory from the Michigan Department of Environmental Quality said leaders will announce the plan at 1:30 p.m. at Kettering University.

The news conference comes after weeks of worrisome news about rising levels of lead in the city's tap water, documented by researchers from Virginia Tech university and a study by a Hurley Medical Center doctor that showed the number of children in the city with elevated blood levels nearly doubled after the city started using the Flint River as its water source in 2014.

Brad Wurfel, director of communications for the DEQ, said Thursday, Oct. 1, that Gov. Rick Snyder cannot attend the news conference.

Snyder said earlier this week that he expected state officials to announce plans to deal with the lead in water issue by Friday, saying, "There are probably some things that weren't as fully understood when that switch was made."

The state oversees water quality in Flint, and state-appointed emergency managers were running city government when decisions were made not to negotiate a short-term agreement to continue buying Lake Huron water from Detroit and to instead use the river as a water source.

Although the city is not currently in violation of the Safe Drinking Water Act, bacteria, the level of total trihalomethanes and lead have been problems in the water system since then.

Among those scheduled to attend the news conference are Mayor Dayne Walling; Harvey Hollins, director of the state Office of Urban Initiatives; Dan Wyant, director of the Michigan DEQ; Nick Lyon, director of the Michigan Department of Health and Human Services; and Dr. Eden Wells, chief medical executive of the state Department of Health and Human Services, the news release said.

Wurfel would not discuss the plan in advance of the news conference, but officials in local, state and the federal government have called for a variety of actions in recent weeks.

Among them: Funding for home water filters, additional testing of city water and reconnection of Flint to the Detroit water system.

"We're looking forward to coming to Flint. We recognize lead is a concern in the city," Wurfel said.

Petition launched for EPA intervention in Flint water crisis

By Amanda Emery | aemery@mlive.com The Flint Journal Follow on Twitter on October 02, 2015 at 8:20 AM, updated October 02, 2015 at 8:21 AM

FLINT, MI -- As the American Civil Liberties Union of Michigan joined a petition urging an immediate federal response to Flint's water crisis, the Greater Flint chapter held its board meeting Thursday to update residents on Flint's water situation.

The petition urges the U.S. Environmental Protection Agency to order Flint to reconnect to the Detroit Water and Sewerage Department system, among other requests.

The board meeting was held Thursday, Oct. 1 at the IINN's Great Lakes

Center, 4800 South Saginaw Street in Flint. About 15 people attended the meeting as ACLU of Michigan investigative reporter Curt Guyette talked about the investigation into lead in the water and what's to come.

Woodside Church Pastor Deborah Conrad attended the meeting to get updates on the water situation. Conrad said she is looking to see what can be done to make it better.

"I've been following a lot of the reports, so it was helpful to put it in a context, to hear some new updates," Conrad said. "To hear some fiery rhetoric about the time for indictments, the time for holding people accountable. I worry that filing lawsuits will just drain the tax base of the state, or the city, or the county, but we need some individuals to be held accountable for their role as agents of government acting in individual capacities, frankly in their individual interests and harming the residents of the city."

Guyette said the ACLU was involved in helping coordinate and conduct the tests on residents' water in Flint. He said a partnership with Virginia Tech was born following the testing of water at the home of Flint resident LeeAnne Walters.

A number of groups from the Flint-area have signed on to the petition asking the EPA to take action that will decrease the danger to Flint residents' health from lead contamination in the drinking water.

A recent study by a Hurley Medical Center doctor found more children in Flint have elevated blood lead levels since Flint switched from the Detroit water system to using the Flint River as its primary water source in April 2014.

The groups include the Coalition for Clean Water, Concerned Pastors for Social Change, Water You Fighting For, Democracy Defense League Water Task Force, Flint Water Study Team, Michigan Nurses Association, NAACP - Michigan State Conference, Michigan Chapter of the National Conference of Black Lawyers, American Civil Liberties Union of Michigan, and the Natural Resources Defense Council.

Genesee County Commissioners Brenda Clack, Jamie Curtis and Bryant Nolden, along with Genesee County Health Officer Mark Valacak, held a news conference Thursday, Oct. 1, urging residents to not drink the city's water until it is checked for lead or they have installed an approved water filter.

The warning came just before an announcement that local, state and federal officials will announce a plan for addressing concerns with lead in Flint's drinking water at a news conference Friday, Oct. 2.

An advisory from the Michigan Department of Environmental Quality said leaders will announce the plan at 1:30 p.m. at Kettering University.

Guyette said the next move in the water saga will depend on what comes Friday.

"Well, a lot of that's going to depend on what the governor has to say," Guyette said, adding that there are more questions that need to be answered.

Frustrations have mounted since the water saga unfolded more than a year ago.

An order signed by Genesee County Circuit Court Judge Archie Hayman on Aug. 17, lowered water and sewer rates and halted the city from shutting off water to customers. Since then an average of 100 fewer customers are paying their water bills.

On Thursday during a news conference honoring the Flint Farmers' Market as one of the top six great public spaces on the American Planning Association's annual "Great Places in America" list a scuffle broke out between a water protestor and a market security guard.

City of Flint Spokesman Jason Lorenz said there were a couple of protestors at the market holding up signs. Lorenz said toward the end of the presentation some of the protestors began shouting.

One woman pulled out a bullhorn and security escorted the group out. Lorenz said that is when a scuffle ensued between the woman and the security guard. He said the woman was arrested on assault and battery charges.

In an effort to relieve the frustration and struggle for city residents, a water filter program has been put in place. Women and children receiving public assistance are on the top of the list to receive free water filters.

The announcement came Thursday that the United Way of Genesee County and the city have raised $105,000 from private and public sources to purchase 5,250 water filters for Flint residents.

The filter program announcement comes a week after the director of Hurley Medical Center's pediatric residency program warned in a study that the number of young children with elevated lead in their blood has doubled since the city changed its water source from Lake Huron to the Flint River.

Details on distribution of the filters will be communicated through the Genesee County Health Department Web site as well as a hotline that is in the process of being established.

Residents, ACLU Ask EPA to Take Action on Flint Water

Rick Pluta • 13 hours ago

(MPRN-Flint) The American Civil Liberties Union and some Flint residents are asking the federal government to step in to deal with the city's water crisis.

A complaint filed with the Environmental Protection Agency seeks an order for the city and the state to stop drawing water from the Flint River and re-connect with the Detroit water system.

The switch was ordered by a state-appointed emergency manager to save money. But the Flint River's water is highly corrosive, and caused lead to leach into the city's drinking water.

"There is no level of lead in water that is safe and it's having a devastating impact on the children in the city of Flint," said Michael Steinberg, an attorney with the ACLU. "In an attempt to save money, the emergency manager in Flint, acting in collusion with the state, provided unsafe drinking water to the residents of Flint, and the results have been catastrophic."

State and city officials are expected to outline the next plans to deal with the city's water crisis as soon as tomorrow.

Budget bill add-on awaits future state funds for Flint water

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 01, 2015 at 6:21 PM, updated October 01, 2015 at 6:22 PM

FLINT, MI -- A funding mechanism aimed at the state paying for measures to reduce lead levels in Flint's drinking water has been added to a budget bill in the Michigan Senate.

Jim Ananich, a Flint Democrat and Senate minority leader, successfully sought the placeholder of $100 to the Department of Environmental Quality for emergency water services for Flint.

The amount of the placeholder is expected to be changed after the true cost of the state's contribution is known, and details of that plan could be revealed as soon as Friday, Oct. 2.

"I worked with the administration (of Gov. Rick Snyder) and my colleagues on the Republican side to put a placeholder in place so that when we determine what resources are needed ... to fix the problem, we can go from there," Ananich said after the vote.

Gov. Rick Snyder earlier this week said he expected to announce those measures by Friday after saying "There are probably some things that weren't as fully understood (as should have been) when that switch (in Flint's water source) was made."

Flint changed its drinking water source from Lake Huron to Flint River in April 2014, a decision that came as the city was being run by a state-appointed emergency manager.

The city has struggled to effectively treat that river water since, and a recent study published by a Hurley Medical Center doctor says the number of children and infants with elevated blood lead levels since the change has nearly doubled.

Experiments by Virginia Tech university point to the source of Flint's water as the culprit, showing it is about 19 times more corrosive than the Lake Huron water that had been purchased from the city of Detroit for decades.

Virginia Tech researchers have said that corrosivity, interacting with lead in city service lines, has resulted in higher lead levels in water.

City officials have asked the state for assistance ranging from lead filters for faucets to help paying the Detroit Water and Sewerage Department to reconnect Flint to the DWSD water supply again until the Karegnondi Water Authority pipeline is completed.

The pipeline is expected to be available to service the city and Genesee County at some point in 2016.

Don't drink Flint's water, Genesee County leaders warn

By Jiquanda Johnson | jjohns16@mlive.com The Flint Journal Follow on Twitter on October 01, 2015 at 6:13 PM, updated October 01, 2015 at 11:33 PM

GENESEE COUNTY, MI — Don't drink the water. That's one message Genesee County officials are pushing to residents who get their water supply from the city of Flint.

Genesee County Commissioners Brenda Clack, Jamie Curtis and Bryant Nolden, along with Genesee County Health Officer Mark Valacak, held a news conference Thursday, Oct. 1, urging residents to not drink the city's water until it is checked for lead or they have installed an approved water filter.

The commissioners declared a public health emergency and said they are hoping their declaration will move Gov. Rick Snyder to declare a state of emergency to handle Flint's water crisis.

"This falls directly on the doorstep of the governor," said Nolden. "If we look at what happened with going to the Flint River, this falls smack-dab on the emergency manager and the governor. Now, I think it's imperative that the state step up and help us fix this problem. We're just imploring that the state actively engage and look at ways we can connect to the Detroit River. ... This is a major health situation for this entire community."

Flint Mayor Dayne Walling issued a statement on the commissioners' declaration, saying Flint water customers should filter their water before drinking it.

Commissioners said they have issued various communications with Snyder's office but still haven't heard any word from the governor about the state's plans.

"Flint residents need safe, clean water, and they need accurate information about their health and their homes," said David Murray, Snyder's deputy press secretary, in a statement issued Thursday. "Gov. Snyder has an action plan that builds on existing efforts to help Flint city leaders and their residents. ... It addresses short- and long-term challenges and will keep city residents safe."

A batch of water filters is expected to arrive in the city sometime Friday, Oct. 2. The filters came from the combined efforts of the United Way, city of Flint, General Motors Foundation and a donation from the Making Our Children Smile Foundation. In total, $105,000 was donated to purchase 5,250 water filters — costing about $20 each — for Flint residents.

Valacak said he is hoping officials can start distributing the water filters as early as Friday afternoon, but they are going to focus on high-risk residents, including pregnant women and homes with children.

The county has partnered with the United Way and other community organizations, such as the University of Michigan-Flint, to help distribute the water filters. Valacak said they are looking to have details on distribution as soon as Friday morning, and updates can be found on the Health Department's website.

In addition, the Flint Department of Public Works is offering free water testing for Flint residents.

There are potentially 45,000 homes in the city that may have issues with lead. Clack, Curtis and Nolden represent the majority of the city on the county board. Nolden said his district is primarily in older areas of the city, where the infrastructure is older and residents may be at high risk for lead exposure.

On Tuesday, Sept. 29, the county issued an advisory warning the community of various health hazards associated with lead, including brain damage, stunted growth and hearing problems in children. Valacak said pregnant women and children 5 and younger are especially vulnerable.

Commissioners said they have reached out to Snyder in hopes of him declaring a state of emergency for the city but have not heard back from his office and also said his anonymous donation of 1,500 water filers nearly a month ago shows the governor's office knows there is a problem with Flint's water.

"To me, that's an admission of guilt," Curtis said. "You know there's a problem. ... We're not looking for anybody to point fingers and put the blame. ... We have lead in our water. Let's fix the problem."

Genesee County declares public health emergency

Steve Carmody, Michigan Radio • 13 hours ago

Recent studies have shown blood lead levels in Flint children have doubled, even tripled in some parts of town, since the city started using the Flint River as its drinking water source.

So today Genesee County officials declared a public health emergency.

“We often use the phrase that children are our most valuable resource … then we got to begin acting like they are,” says County Commissioner Brenda Clack.

County commission chairman Jaime Curtis says lead levels in the city of Flint’s water are threatening people’s lives.

“We’ll take water. We’ll take filters. We’ll take money. We’ll take anything to keep our people safe,” Curtis said at a news conference.

The county hopes to start distributing thousands of water filters tomorrow.

The city of Flint issued a lead advisory last week.

Flint Mayor Dayne Walling issued a statement urging people in Flint to follow the guidelines in the county's public health declaration.

"I encourage the public to follow the guidance in the declaration to use a certified filter, have water testing done, and flush cold water for five minutes before drinking," says Walling.

Tomorrow, a "comprehensive" plan will be announced for dealing with Flint's water crisis.

Who's to blame for Flint's water crisis? Virginia Tech researcher points the finger at MDEQ

Mark Brush, Michigan Radio • 15 hours ago

Yesterday, Gov. Rick Snyder admitted that the decision to switch the city of Flint's water supply from Detroit's system over to the Flint River was not well planned.

“In terms of a mistake, what I would say is, is there are probably things that were not as fully understood as when that switch was made,” Snyder said.

At the direction of the state-appointed emergency manager, the city made the switch in April 2014, and problems with the drinking water started soon after.

People complained of brown water. There were boil-water advisories after the water was found to have E. coli contamination, and the drinking water also had unsafe levels of a chlorine byproduct (total trihalomethanes).

Fast forward almost a year and a half, and now we learn some residents in the city are being exposed to unsafe levels of lead in their drinking water. Pediatricians have concluded that the water in Flint is likely poisoning kids.

How could one of Michigan’s major cities be facing this problem?

Marc Edwards, a civil engineering professor from Virginia Tech University and a nationally renowned expert on water treatment, has put the blame squarely on the agency in charge of overseeing the safety of Flint’s drinking water, the Michigan Department of Environmental Quality.

Edwards published a blog post yesterday in which he writes:

Given MDEQ’s insistence that there is absolutely nothing wrong with Flint water, we have created a timeline that illustrates how MDEQ’s mistakes and deception created the Flint water crisis in the first place.

In his timeline, Edwards says the state failed to require that the city have a corrosion-control program in place when the city switched over to Flint River water.

“What we discovered to our shock was that they switched to a new water source that was obviously very corrosive, meaning it would eat up the lead pipe and iron pipe and essentially put the metals into the water, without controlling the corrosion,” Edwards says. “And this is a horrible idea in a city full of lead plumbing and lead pipe like Flint.”

Edwards says current estimates are that Flint has about 15,000 drinking water service lines made of lead.

How dangerous metals can get into drinking water

When water flows through copper and lead pipes, it can take up some of the metal and make the water unsafe. To control for this problem, the Environmental Protection Agency has what’s called a “lead and copper rule."

The purpose of the rule is listed in this “quick reference guide:"

Protect public health by minimizing lead (Pb) and copper (Cu) levels in drinking water, primarily by reducing water corrosivity. Pb and Cu enter drinking water mainly from corrosion of Pb and Cu containing plumbing materials.

To keep these metals from leaching into drinking water, municipal treatment plants can change the water chemistry to lower the water’s ability to corrode these pipes.

It’s called “corrosion control,” and Edwards says the Michigan Department of Environmental Quality covered up the fact that Flint had no corrosion control program in place.

“Before you switch to a new water source, six months to a year ahead of time, you are supposed to do laboratory experiments to determine the corrosivity of the water," says Edwards. "And the chemistry – the pH, the alkalinity, and the phosphate that you need to make sure that the lead stays on the pipes and out of the water."

Edwards contends that the new water system had to have a "corrosion control" plan in place so that "you're not doing an uncontrolled human experiment on a city's population."

According to emails obtained by the ACLU of Michigan, a state MDEQ official, Stephen Busch, responded to a request from EPA Region 5, the federal agency that oversees MDEQ, that the new water system in Flint did have a corrosion control program in place.

That exchange occurred in February of this year.

In April, according to the emails, the EPA Region 5 official later found out that was not true. Flint, it turns out, did not have a corrosion-control program in place.

From the emails:

Pat Cook [of MDEQ] has confirmed that following the disconnection from Detroit, Flint has not been operating any corrosion control treatment, which is very concerning given the likelihood of LSLs [lead service lines] in the city.

The state has maintained that it is not required under the EPA's lead and copper rule to have a corrosion-control plan in place until two rounds of testing are completed to determine what that plan looks like.

More from Michigan Radio's Lindsey Smith:

At face value, the EPA rules are clear, all water systems that serve more than 50,000 people must have some kind of corrosion control.

But when you switch water sources, there is apparently some room for interpretation.

In approving updates to this federal regulation in 2000, the EPA noted that “water systems need to make treatment changes, on occasion, to react to changing circumstances.”

In these cases, the rule does not “prevent a state from approving treatment changes,” but it’s not entirely clear if the state can approve having zero corrosion-control treatment.

As Edwards understands it, the EPA should have acted once the agency found out the state had no corrosion-control plan in place in Flint.

“If there was ever a case where [the] EPA should exert emergency powers and take primacy away from an agency, this is it,” he said.

Edwards says the city was also not conducting tests for lead and copper properly.

The point of the lead and copper rule is to make sure cities are sampling homes that are high risk – that is, homes serviced by lead pipe.

An ACLU of Michigan investigation found that the city did not know whether it was testing homes serviced by lead pipes.

In this video, Michael Glasgow, the utilities manager for Flint, indicated the city doesn't know where the lead pipes are.

Our Editorial: Get Flint residents drinkable water

The Detroit News 11:32 p.m. EDT October 1, 2015

It doesn't matter if official reports say Flint's water is safe to drink. If residents turn on the tap and the water that comes out is oddly colored — or any color but clear — and stinky, they aren't going to drink it. Nor should they have to.

Flint water customers have been complaining about the smell, taste and color of their water since the spring of 2014, after the city cut its ties to the Detroit Water system and started treating and delivering its own supply.

The move saved Flint about $12 million a year, not an insignificant amount for a city that is under emergency financial management by the state of Michigan because of its shaky finances.

But cheaper water is no bargain if it is undrinkable. And residents of Flint are making a good case that the water the city provides is unfit for human consumption.

Water in the Detroit system is pulled from the depths of Lake Huron and has few contaminants that must be cleansed away at the treatment plant. Flint, for now at least, gets its water from the Flint River, which has endured a century or more of industrial and residential pollution.

Cleansing the river water is a more challenging task, and one Flint has yet to master. Residents have received a string of “boil water” notices due to mistakes made at the plant.

Most worrisome, however, is a new report that indicates elevated levels of lead in Flint children under the age of 5. Lead has a detrimental impact on development, and its increased presence in Flint’s kids should not be taken lightly.

The state Department of Environmental Quality insists the water has been thoroughly tested and is safe.

But, again, residents who see and smell foul water coming from their tap can be forgiven if they doubt those assurances.

Gov. Rick Snyder, working with an unnamed private donor, recently distributed about 1,500 filters to Flint water customers. The filters remove chemical compounds as well as lead.

That seems a good temporary solution at least. But thousands more are needed. State Sen. Jim Ananich, a Democrat from Flint, is asking the state to find the funds for 15,000 filters to distribute to all water system customers.

That is a reasonable request, and may bridge residents until next year, when the city is expected to connect to a new regional water pipeline from Lake Huron.

The other option is to reconnect to the Detroit water system.

Whatever choice is made, the solution should be put in place quickly. If the elevated lead levels discovered by pediatricians at the Hurley Medical Center are linked to the water supply, then this is a public health emergency that demands an urgent response.

Flint residents are paying for water, and have the right to expect it to be clean and drinkable. They should not have to spend additional money each month to purchase bottled water.

The decision to disconnect Flint from Detroit water lines was made under the state’s watch. The state has a responsibility to find a fix, and soon.

Efforts to get the lead out of Flint’s water awash in finger-pointing

BY JACK LESSENBERRY

BLADE OMBUDSMAN

FLINT, Mich. — Residents here haven’t yet marched on city hall or the governor’s office with pitchforks and blazing torches. But if they did, a lot of people might not blame them.

Flint has plenty of troubles: devastating job and population losses, plummeting property values, and a succession of emergency managers over the past four years.

The latest outrage is about water. Water that is discolored and foul-smelling. Water that at first had too much bacteria and then too much disinfectant.

And water that now seems to be causing lead poisoning in some of Flint's children. One woman, whose husband works as a policy planner for city government, said her spouse was "in tears as a new father himself when an irate resident came in with her premature, lead-poisoned baby."

Flint's water saga goes back to last year, when officials announced that their cash-strapped city could no longer afford to buy water from Detroit.

They announced they would join a new consortium, the Karegnondi Water Authority, which would supply purified water from Lake Huron. But Karegnondi's operation won't be up and running until sometime the following year.

So Flint officials announced that in the meantime, they would supply residents with treated water from the Flint River. But that turned into a disaster from almost day one. There were reports that the water was discolored and foul-tasting.

When tests showed that the water was dangerously contaminated with bacteria, including the infamous E. coli, the city pumped chlorine into the water.

That backfired too: In January, residents were told their water didn't meet federal safety standards, this time because of the chlorine.

While it may have killed the bacteria, it left the water with high levels of trihalomethane (TTHM), which is thought to increase the chances of developing cancer.

Average levels of TTHM didn't become acceptable until late this summer. Then Flint had a terrifying new problem: lead poisoning.

Last week, a study by physicians at Hurley Medical Center in Flint showed that the tap water in Flint has resulted in significantly elevated levels in the blood of the city's children. The scientists said the lead isn't actually in the water, but that the river water itself was more corrosive than the lake water Flint had been buying from Detroit.

A team from Virginia Tech tested samples last month from 300 homes, and found what it called "seriously" high levels of lead. The Hurley study found the percentage of children with seriously elevated lead levels had almost doubled.

That got politicians' attention. Mayor Dayne Walling advised residents to use only cold water, let it run from the tap for five minutes, and buy a filter for lead removal. The mayor also asked Gov. Rick Snyder to come up with $30 million to fix the water system and replace lead pipes.

City officials say about half the customers in Flint may be facing a problem, because the transmission lines connecting them to city water mains are made with lead.

The mayor's request for money from the governor wasn't good enough for the editorial board of the Flint Journal, the city's newspaper. When the news of lead poisoning surfaced, it ran an editorial saying "it's time to abandon the Flint River" as a drinking water source.

"We call on the governor to make this right for Flint citizens by brokering a return to Detroit water that won't bankrupt the city of Flint," the editorial said. It added: "Flint is in a crisis that was created in no small part by Snyder's hand-picked emergency manager, and it is Snyder's job to fix this mess."

Yet the governor has shown no signs of doing any such thing.

Pat Clawson, a longtime Flint area resident and former investigative reporter, thinks his city's plight should be a national scandal. "They are poisoning the people with this water — poisoning them, and that's what the doctors call it among themselves," he told me.

He puts the lion's share of the blame on Mayor Walling, who he says "was involved in planning and promoting the switch to Flint River water from the start."

But Mr. Clawson says there is plenty of blame to go around: "I believe there is criminal culpability on the part of public officials for causing and concealing this crisis."

He urged the federal and state governments to convene grand juries to investigate. Whether that will happen is anyone's guess. Meanwhile, the agony continues for the 99,000 folks who still live in the once-prosperous city of Flint.

Jack Lessenberry, a member of the journalism faculty at Wayne State University in Detroit and The Blade's ombudsman, writes on issues and people in Michigan.

http://www.wtvm.com/story/30170601/public-health-emergency-declared-due-to-lead-in-flint-water

Public health emergency declared due to lead in Flint water

By COREY WILLIAMS, Associated Press

DETROIT (AP) - A public health emergency has been declared in cash-strapped Flint after tests showed the Michigan city's water supply is causing elevated levels of lead in children and following months of complaints about the smell and taste.

Gov. Rick Snyder this week questioned the switch to the Flint River from the Detroit water system in 2014, a decision that was made as a cost-saving move while a new regional pipeline is built to Lake Huron.

And on Thursday, the Genesee County health department declared a public health emergency, recommending that people not drink the water unless it has been filtered and tested to rule out elevated levels of lead. More steps will be announced Friday.

The problem: Although the river water is treated, it is corrosive and releasing lead from old plumbing in thousands of homes.

A coalition of residents and national groups petitioned the U.S. Environmental Protection Agency to order the state to reconnect Flint to Detroit water.

"As evidenced by the ongoing poisoning of the children of Flint, it's time for the EPA to take immediate action to provide us with a safe water source," LeeAnne Walters, a Flint parent and member of the Water You Fighting For group, said Thursday.

Flint, 60 miles north of Detroit, is among a number of communities that have complained about the rising cost of Detroit's water and sewerage service, which serves about 4 million people in southeastern Michigan. It opted to temporarily use the Flint River until a new line to Port Huron opens in 2016 at an annual cost of $12.5 million.

The decision to break away from the Detroit system was made while a Snyder-appointed emergency manager was running the long-struggling city, which had reached a financial crisis.

"In terms of a mistake, what I would say is we found there are probably things that weren't as fully understood when that switch was made," the governor said Wednesday.

His comments marked a significant shift. In July, a spokesman for the state's Department of Environmental Quality, Brad Wurfel, recommended home tests but added: "Anyone who is concerned about lead in the drinking water in Flint can relax."

Residents are unhappy with the taste, smell and appearance of water from the Flint River and have reported rashes, hair loss and other health concerns that they attribute to it. A General Motors plant stopped using the water because it was causing excessive rust.

Despite the complaints, city officials had said state tests showed the water met federal safety guidelines.

But in September, Virginia Tech researchers released a report saying Flint's water was creating a health threat in old homes that have lead pipes or pipes fused with lead solder. And doctors last week reported high levels of lead in local children's blood samples, also blaming water pipes.

Flint officials say they know which homes have risky pipes but that the information is on about 45,000 index cards and difficult to retrieve.

The city is now telling residents to use only cold water for drinking, cooking and making baby formula, and recommending they use the certified filters. The General Motors Foundation, the local United Way and others have given at least $105,000 to buy filters for 5,000 residents.

State to announce Flint water action plan Friday at Kettering

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 01, 2015 at 8:12 PM, updated October 01, 2015 at 11:12 PM

FLINT, MI — Local, state and federal officials are set to announce a plan for addressing concerns with lead in Flint's drinking water at a news conference Friday, Oct. 2.

An advisory from the Michigan Department of Environmental Quality said leaders will announce the plan at 1:30 p.m. at Kettering University.

The news conference comes after weeks of worrisome news about rising levels of lead in the city's tap water, documented by researchers from Virginia Tech university and a study by a Hurley Medical Center doctor that showed the number of children in the city with elevated blood levels nearly doubled after the city started using the Flint River as its water source in 2014.

Brad Wurfel, director of communications for the DEQ, said Thursday, Oct. 1, that Gov. Rick Snyder cannot attend the news conference.

Snyder said earlier this week that he expected state officials to announce plans to deal with the lead in water issue by Friday, saying, "There are probably some things that weren't as fully understood when that switch was made."

The state oversees water quality in Flint, and state-appointed emergency managers were running city government when decisions were made not to negotiate a short-term agreement to continue buying Lake Huron water from Detroit and to instead use the river as a water source.

Although the city is not currently in violation of the Safe Drinking Water Act, bacteria, the level of total trihalomethanes and lead have been problems in the water system since then.

Among those scheduled to attend the news conference are Mayor Dayne Walling; Harvey Hollins, director of the state Office of Urban Initiatives; Dan

Wyant, director of the Michigan DEQ; Nick Lyon, director of the Michigan Department of Health and Human Services; and Dr. Eden Wells, chief medical executive of the state Department of Health and Human Services, the news release said.

Wurfel would not discuss the plan in advance of the news conference, but officials in local, state and the federal government have called for a variety of actions in recent weeks.

Among them: Funding for home water filters, additional testing of city water and reconnection of Flint to the Detroit water system.

"We're looking forward to coming to Flint. We recognize lead is a concern in the city," Wurfel said.

Petition launched for EPA intervention in Flint water crisis

By Amanda Emery | aemery@mlive.com The Flint Journal Follow on Twitter on October 02, 2015 at 8:20 AM, updated October 02, 2015 at 8:21 AM

FLINT, MI -- As the American Civil Liberties Union of Michigan joined a petition urging an immediate federal response to Flint's water crisis, the Greater Flint chapter held its board meeting Thursday to update residents on Flint's water situation.

The petition urges the U.S. Environmental Protection Agency to order Flint to reconnect to the Detroit Water and Sewerage Department system, among other requests.

The board meeting was held Thursday, Oct. 1 at the IINN's Great Lakes Center, 4800 South Saginaw Street in Flint. About 15 people attended the meeting as ACLU of Michigan investigative reporter Curt Guyette talked about the investigation into lead in the water and what's to come.

Woodside Church Pastor Deborah Conrad attended the meeting to get updates on the water situation. Conrad said she is looking to see what can be done to make it better.

"I've been following a lot of the reports, so it was helpful to put it in a context, to hear some new updates," Conrad said. "To hear some fiery rhetoric about the time for indictments, the time for holding people accountable. I worry that filing lawsuits will just drain the tax base of the state, or the city, or the county, but we need some individuals to be held accountable for their role as agents of government acting in individual capacities, frankly in their individual interests and harming the residents of the city."

Guyette said the ACLU was involved in helping coordinate and conduct the tests on residents' water in Flint. He said a partnership with Virginia Tech was born following the testing of water at the home of Flint resident LeeAnne Walters.

A number of groups from the Flint-area have signed on to the petition asking the EPA to take action that will decrease the danger to Flint residents' health from lead contamination in the drinking water.

A recent study by a Hurley Medical Center doctor found more children in Flint have elevated blood lead levels since Flint switched from the Detroit water system to using the Flint River as its primary water source in April 2014.

The groups include the Coalition for Clean Water, Concerned Pastors for Social Change, Water You Fighting For, Democracy Defense League Water Task Force, Flint Water Study Team, Michigan Nurses Association, NAACP - Michigan State Conference, Michigan Chapter of the National Conference of Black Lawyers, American Civil Liberties Union of Michigan, and the Natural Resources Defense Council.

Genesee County Commissioners Brenda Clack, Jamie Curtis and Bryant Nolden, along with Genesee County Health Officer Mark Valacak, held a news conference Thursday, Oct. 1, urging residents to not drink the city's water until it is checked for lead or they have installed an approved water filter.

The warning came just before an announcement that local, state and federal officials will announce a plan for addressing concerns with lead in Flint's drinking water at a news conference Friday, Oct. 2.

An advisory from the Michigan Department of Environmental Quality said leaders will announce the plan at 1:30 p.m. at Kettering University.

Guyette said the next move in the water saga will depend on what comes Friday.

"Well, a lot of that's going to depend on what the governor has to say," Guyette said, adding that there are more questions that need to be answered.

Frustrations have mounted since the water saga unfolded more than a year ago.

An order signed by Genesee County Circuit Court Judge Archie Hayman on Aug. 17, lowered water and sewer rates and halted the city from shutting off water to customers. Since then an average of 100 fewer customers are paying their water bills.

On Thursday during a news conference honoring the Flint Farmers' Market as one of the top six great public spaces on the American Planning Association's annual "Great Places in America" list a scuffle broke out between a water protestor and a market security guard.

City of Flint Spokesman Jason Lorenz said there were a couple of protestors at the market holding up signs. Lorenz said toward the end of the presentation some of the protestors began shouting.

One woman pulled out a bullhorn and security escorted the group out. Lorenz said that is when a scuffle ensued between the woman and the security guard. He said the woman was arrested on assault and battery charges.

In an effort to relieve the frustration and struggle for city residents, a water filter program has been put in place. Women and children receiving public assistance are on the top of the list to receive free water filters.

The announcement came Thursday that the United Way of Genesee County and the city have raised $105,000 from private and public sources to purchase 5,250 water filters for Flint residents.

The filter program announcement comes a week after the director of Hurley Medical Center's pediatric residency program warned in a study that the number of young children with elevated lead in their blood has doubled since the city changed its water source from Lake Huron to the Flint River.

Details on distribution of the filters will be communicated through the Genesee County Health Department Web site as well as a hotline that is in the process of being established.

Residents, ACLU Ask EPA to Take Action on Flint Water

Rick Pluta • 13 hours ago

(MPRN-Flint) The American Civil Liberties Union and some Flint residents are asking the federal government to step in to deal with the city's water crisis.

A complaint filed with the Environmental Protection Agency seeks an order for the city and the state to stop drawing water from the Flint River and re-connect with the Detroit water system.

The switch was ordered by a state-appointed emergency manager to save money. But the Flint River's water is highly corrosive, and caused lead to leach into the city's drinking water.

"There is no level of lead in water that is safe and it's having a devastating impact on the children in the city of Flint," said Michael Steinberg, an attorney with the ACLU. "In an attempt to save money, the emergency manager in Flint, acting in collusion with the state, provided unsafe drinking water to the residents of Flint, and the results have been catastrophic."

State and city officials are expected to outline the next plans to deal with the city's water crisis as soon as tomorrow.

Budget bill add-on awaits future state funds for Flint water

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 01, 2015 at 6:21 PM, updated October 01, 2015 at 6:22 PM

FLINT, MI -- A funding mechanism aimed at the state paying for measures to reduce lead levels in Flint's drinking water has been added to a budget bill in the Michigan Senate.

Jim Ananich, a Flint Democrat and Senate minority leader, successfully sought the placeholder of $100 to the Department of Environmental Quality for emergency water services for Flint.

The amount of the placeholder is expected to be changed after the true cost of the state's contribution is known, and details of that plan could be revealed as soon as Friday, Oct. 2.

"I worked with the administration (of Gov. Rick Snyder) and my colleagues on the Republican side to put a placeholder in place so that when we determine what resources are needed ... to fix the problem, we can go from there," Ananich said after the vote.

Gov. Rick Snyder earlier this week said he expected to announce those measures by Friday after saying "There are probably some things that weren't as fully understood (as should have been) when that switch (in Flint's water source) was made."

Flint changed its drinking water source from Lake Huron to Flint River in April 2014, a decision that came as the city was being run by a state-appointed emergency manager.

The city has struggled to effectively treat that river water since, and a recent study published by a Hurley Medical Center doctor says the number of children and infants with elevated blood lead levels since the change has nearly doubled.

Experiments by Virginia Tech university point to the source of Flint's water as the culprit, showing it is about 19 times more corrosive than the Lake Huron water that had been purchased from the city of Detroit for decades.

Virginia Tech researchers have said that corrosivity, interacting with lead in city service lines, has resulted in higher lead levels in water.

City officials have asked the state for assistance ranging from lead filters for faucets to help paying the Detroit Water and Sewerage Department to reconnect Flint to the DWSD water supply again until the Karegnondi Water Authority pipeline is completed.

The pipeline is expected to be available to service the city and Genesee County at some point in 2016.

Don't drink Flint's water, Genesee County leaders warn

By Jiquanda Johnson | jjohns16@mlive.com The Flint Journal Follow on Twitter on October 01, 2015 at 6:13 PM, updated October 01, 2015 at 11:33 PM

GENESEE COUNTY, MI — Don't drink the water. That's one message Genesee County officials are pushing to residents who get their water supply from the city of Flint.

Genesee County Commissioners Brenda Clack, Jamie Curtis and Bryant Nolden, along with Genesee County Health Officer Mark Valacak, held a news conference Thursday, Oct. 1, urging residents to not drink the city's water until it is checked for lead or they have installed an approved water filter.

The commissioners declared a public health emergency and said they are hoping their declaration will move Gov. Rick Snyder to declare a state of emergency to handle Flint's water crisis.

"This falls directly on the doorstep of the governor," said Nolden. "If we look at what happened with going to the Flint River, this falls smack-dab on the emergency manager and the governor. Now, I think it's imperative that the state step up and help us fix this problem. We're just imploring that the state actively engage and look at ways we can connect to the Detroit River. ... This is a major health situation for this entire community."

Flint Mayor Dayne Walling issued a statement on the commissioners' declaration, saying Flint water customers should filter their water before drinking it.

Commissioners said they have issued various communications with Snyder's office but still haven't heard any word from the governor about the state's plans.

"Flint residents need safe, clean water, and they need accurate information about their health and their homes," said David Murray, Snyder's deputy press secretary, in a statement issued Thursday. "Gov. Snyder has an action plan that builds on existing efforts to help Flint city leaders and their residents. ... It addresses short- and long-term challenges and will keep city residents safe."

A batch of water filters is expected to arrive in the city sometime Friday, Oct. 2. The filters came from the combined efforts of the United Way, city of Flint, General Motors Foundation and a donation from the Making Our Children Smile Foundation. In total, $105,000 was donated to purchase 5,250 water filters — costing about $20 each — for Flint residents.

Valacak said he is hoping officials can start distributing the water filters as early as Friday afternoon, but they are going to focus on high-risk residents, including pregnant women and homes with children.

The county has partnered with the United Way and other community organizations, such as the University of Michigan-Flint, to help distribute the water filters. Valacak said they are looking to have details on distribution as soon as Friday morning, and updates can be found on the Health Department's website.

In addition, the Flint Department of Public Works is offering free water testing for Flint residents.

There are potentially 45,000 homes in the city that may have issues with lead. Clack, Curtis and Nolden represent the majority of the city on the county board. Nolden said his district is primarily in older areas of the city, where the infrastructure is older and residents may be at high risk for lead exposure.

On Tuesday, Sept. 29, the county issued an advisory warning the community of various health hazards associated with lead, including brain damage, stunted growth and hearing problems in children. Valacak said pregnant women and children 5 and younger are especially vulnerable.

Commissioners said they have reached out to Snyder in hopes of him declaring a state of emergency for the city but have not heard back from his office and also said his anonymous donation of 1,500 water filers nearly a month ago shows the governor's office knows there is a problem with Flint's water.

"To me, that's an admission of guilt," Curtis said. "You know there's a problem. ... We're not looking for anybody to point fingers and put the blame. ... We have lead in our water. Let's fix the problem."

Genesee County declares public health emergency

Steve Carmody, Michigan Radio • 13 hours ago

Recent studies have shown blood lead levels in Flint children have doubled, even tripled in some parts of town, since the city started using the Flint River as its drinking water source.

So today Genesee County officials declared a public health emergency.

“We often use the phrase that children are our most valuable resource … then we got to begin acting like they are,” says County Commissioner Brenda Clack.

County commission chairman Jaime Curtis says lead levels in the city of Flint’s water are threatening people’s lives.

“We’ll take water. We’ll take filters. We’ll take money. We’ll take anything to keep our people safe,” Curtis said at a news conference.

The county hopes to start distributing thousands of water filters tomorrow.

The city of Flint issued a lead advisory last week.

Flint Mayor Dayne Walling issued a statement urging people in Flint to follow the guidelines in the county’s public health declaration.

"I encourage the public to follow the guidance in the declaration to use a certified filter, have water testing done, and flush cold water for five minutes before drinking,” says Walling.

Tomorrow, a "comprehensive" plan will be announced for dealing with Flint’s water crisis.

Who's to blame for Flint's water crisis? Virginia Tech researcher points the finger at MDEQ

Mark Brush, Michigan Radio • 15 hours ago

Yesterday, Gov. Rick Snyder admitted that the decision to switch the city of Flint's water supply from Detroit's system over to the Flint River was not well planned.

“In terms of a mistake, what I would say is, is there are probably things that were not as fully understood as when that switch was made,” Snyder said.

At the direction of the state-appointed emergency manager, the city made the switch in April 2014, and problems with the drinking water started soon after.

People complained of brown water. There were boil-water advisories after the water was found to have E. coli contamination, and the drinking water also had unsafe levels of a chlorine byproduct (total trihalomethanes).

Fast forward almost a year and a half, and now we learn some residents in the city are being exposed to unsafe levels of lead in their drinking water. Pediatricians have concluded that the water in Flint is likely poisoning kids.

How could one of Michigan’s major cities be facing this problem?

Marc Edwards, a civil engineering professor from Virginia Tech University and a nationally renowned expert on water treatment, has put the blame squarely on the agency in charge of overseeing the safety of Flint’s drinking water, the Michigan Department of Environmental Quality.

Edwards published a blog post yesterday in which he writes:

Given MDEQ’s insistence that there is absolutely nothing wrong with Flint water, we have created a timeline that illustrates how MDEQ's mistakes and deception created the Flint water crisis in the first place.

In his timeline, Edwards says the state failed to require that the city have a corrosion-control program in place when the city switched over to Flint River water.

"What we discovered to our shock was that they switched to a new water source that was obviously very corrosive, meaning it would eat up the lead pipe and iron pipe and essentially put the metals into the water, without controlling the corrosion," Edwards says. "And this is a horrible idea in a city full of lead plumbing and lead pipe like Flint."

Edwards says current estimates are that Flint has about 15,000 drinking water service lines made of lead.

How dangerous metals can get into drinking water

When water flows through copper and lead pipes, it can take up some of the metal and make the water unsafe. To control for this problem, the Environmental Protection Agency has what's called a "lead and copper rule."

The purpose of the rule is listed in this "quick reference guide:"

Protect public health by minimizing lead (Pb) and copper (Cu) levels in drinking water, primarily by reducing water corrosivity. Pb and Cu enter drinking water mainly from corrosion of Pb and Cu containing plumbing materials.

To keep these metals from leaching into drinking water, municipal treatment plants can change the water chemistry to lower the water's ability to corrode these pipes.

It’s called “corrosion control,” and Edwards says the Michigan Department of Environmental Quality covered up the fact that Flint had no corrosion control program in place.

“Before you switch to a new water source, six months to a year ahead of time, you are supposed to do laboratory experiments to determine the corrosivity of the water,” says Edwards. “And the chemistry – the pH, the alkalinity, and the phosphate that you need to make sure that the lead stays on the pipes and out of the water.”

Edwards contends that the new water system had to have a “corrosion control” plan in place so that “you’re not doing an uncontrolled human experiment on a city’s population.”

According to emails obtained by the ACLU of Michigan, a state MDEQ official, Stephen Busch, responded to a request from EPA Region 5, the federal agency that oversees MDEQ, that the new water system in Flint did have a corrosion control program in place.

That exchange occurred in February of this year.

In April, according to the emails, the EPA Region 5 official later found out that was not true. Flint, it turns out, did not have a corrosion-control program in place.

From the emails:

Pat Cook [of MDEQ] has confirmed that following the disconnection from Detroit, Flint has not been operating any corrosion control treatment, which is very concerning given the likelihood of LSLs [lead service lines] in the city.

The state has maintained that it is not required under the EPA's lead and copper rule to have a corrosion-control plan in place until two rounds of testing are completed to determine what that plan looks like.

More from Michigan Radio's Lindsey Smith:

At face value, the EPA rules are clear, all water systems that serve more than 50,000 people must have some kind of corrosion control.

But when you switch water sources, there is apparently some room for interpretation.

In approving updates to this federal regulation in 2000, the EPA noted that "water systems need to make treatment changes, on occasion, to react to changing circumstances."

In these cases, the rule does not "prevent a state from approving treatment changes," but it's not entirely clear if the state can approve having zero corrosion-control treatment.

As Edwards understands it, the EPA should have acted once the agency found out the state had no corrosion-control plan in place in Flint.

"If there was ever a case where [the] EPA should exert emergency powers and take primacy away from an agency, this is it," he said.

Edwards says the city was also not conducting tests for lead and copper properly.

The point of the lead and copper rule is to make sure cities are sampling homes that are high risk – that is, homes serviced by lead pipe.

An ACLU of Michigan investigation found that the city did not know whether it was testing homes serviced by lead pipes.

In this video, Michael Glasgow, the utilities manager for Flint, indicated the city doesn't know where the lead pipes are.

http://www.detroitnews.com/story/opinion/editorials/2015/10/01/editorial-flint-drinkable-water/73172092/

Our Editorial: Get Flint residents drinkable water

The Detroit News 11:32 p.m. EDT October 1, 2015

It doesn’t matter if official reports say Flint’s water is safe to drink. If residents turn on the tap and the water that comes out is oddly colored — or any color but clear — and stinky, they aren’t going to drink it. Nor should they have to.

Flint water customers have been complaining about the smell, taste and color of their water since the spring of 2014, after the city cut its ties to the Detroit Water system and started treating and delivering its own supply.

The move saved Flint about $12 million a year, not an insignificant amount for a city that is under emergency financial management by the state of Michigan because of its shaky finances.

But cheaper water is no bargain if it is undrinkable. And residents of Flint are making a good case that the water the city provides is unfit for human consumption.

Water in the Detroit system is pulled from the depths of Lake Huron and has few contaminants that must be cleansed away at the treatment plant. Flint, for now at least, gets its water from the Flint River, which has endured a century or more of industrial and residential pollution.

Cleansing the river water is a more challenging task, and one Flint has yet to master. Residents have received a string of "boil water" notices due to mistakes made at the plant.

Most worrisome, however, is a new report that indicates elevated levels of lead in Flint children under the age of 5. Lead has a detrimental impact on development, and its increased presence in Flint's kids should not be taken lightly.

The state Department of Environmental Quality insists the water has been thoroughly tested and is safe.

But, again, residents who see and smell foul water coming from their tap can be forgiven if they doubt those assurances.

Gov. Rick Snyder, working with an unnamed private donor, recently distributed about 1,500 filters to Flint water customers. The filters remove chemical compounds as well as lead.

That seems a good temporary solution at least. But thousands more are needed. State Sen. Jim Ananich, a Democrat from Flint, is asking the state to find the funds for 15,000 filters to distribute to all water system customers.

That is a reasonable request, and may bridge residents until next year, when the city is expected to connect to a new regional water pipeline from Lake Huron.

The other option is to reconnect to the Detroit water system.

Whatever choice is made, the solution should be put in place quickly. If the elevated lead levels discovered by pediatricians at the Hurley Medical Center are linked to the water supply, then this is a public health emergency that demands an urgent response.

Flint residents are paying for water, and have the right to expect it to be clean and drinkable. They should not have to spend additional money each month to purchase bottled water.

The decision to disconnect Flint from Detroit water lines was made under the state's watch. The state has a responsibility to find a fix, and soon.

Efforts to get the lead out of Flint's water awash in finger-pointing

BY JACK LESSENBERRY

BLADE OMBUDSMAN

FLINT, Mich. — Residents here haven't yet marched on city hall or the governor's office with pitchforks and blazing torches. But if they did, a lot of people might not blame them.

Flint has plenty of troubles: devastating job and population losses, plummeting property values, and a succession of emergency managers over the past four years.

The latest outrage is about water. Water that is discolored and foul-smelling. Water that at first had too much bacteria and then too much disinfectant.

And water that now seems to be causing lead poisoning in some of Flint's children. One woman, whose husband works as a policy planner for city government, said her spouse was "in tears as a new father himself when an irate resident came in with her premature, lead-poisoned baby."

Flint's water saga goes back to last year, when officials announced that their cash-strapped city could no longer afford to buy water from Detroit.

They announced they would join a new consortium, the Karegnondi Water Authority, which would supply purified water from Lake Huron. But Karegnondi's operation won't be up and running until sometime the following year.

So Flint officials announced that in the meantime, they would supply residents with treated water from the Flint River. But that turned into a disaster from almost day one. There were reports that the water was discolored and foul-tasting.

When tests showed that the water was dangerously contaminated with bacteria, including the infamous E. coli, the city pumped chlorine into the water.

That backfired too: In January, residents were told their water didn't meet federal safety standards, this time because of the chlorine.

While it may have killed the bacteria, it left the water with high levels of trihalomethane (TTHM), which is thought to increase the chances of developing cancer.

Average levels of TTHM didn't become acceptable until late this summer. Then Flint had a terrifying new problem: lead poisoning.

Last week, a study by physicians at Hurley Medical Center in Flint showed that the tap water in Flint has resulted in significantly elevated levels in the blood of the city's children. The scientists said the lead isn't actually in the water, but that the river water itself was more corrosive than the lake water Flint had been buying from Detroit.

A team from Virginia Tech tested samples last month from 300 homes, and found what it called "seriously" high levels of lead. The Hurley study found the percentage of children with seriously elevated lead levels had almost doubled.

That got politicians' attention. Mayor Dayne Walling advised residents to use only cold water, let it run from the tap for five minutes, and buy a filter for lead removal. The mayor also asked Gov. Rick Snyder to come up with $30 million to fix the water system and replace lead pipes.

City officials say about half the customers in Flint may be facing a problem, because the transmission lines connecting them to city water mains are made with lead.

The mayor's request for money from the governor wasn't good enough for the editorial board of the Flint Journal, the city's newspaper. When the news of lead poisoning surfaced, it ran an editorial saying "it's time to abandon the Flint River" as a drinking water source.

"We call on the governor to make this right for Flint citizens by brokering a return to Detroit water that won't bankrupt the city of Flint," the editorial said. It added: "Flint is in a crisis that was created in no small part by Snyder's hand-picked emergency manager, and it is Snyder's job to fix this mess."

Yet the governor has shown no signs of doing any such thing.

Pat Clawson, a longtime Flint area resident and former investigative reporter, thinks his city's plight should be a national scandal. "They are poisoning the people with this water — poisoning them, and that's what the doctors call it among themselves," he told me.

He puts the lion's share of the blame on Mayor Walling, who he says "was involved in planning and promoting the switch to Flint River water from the start."

But Mr. Clawson says there is plenty of blame to go around: "I believe there is criminal culpability on the part of public officials for causing and concealing this crisis."

He urged the federal and state governments to convene grand juries to investigate. Whether that will happen is anyone's guess. Meanwhile, the agony continues for the 99,000 folks who still live in the once-prosperous city of Flint.

Jack Lessenberry, a member of the journalism faculty at Wayne State University in Detroit and The Blade's ombudsman, writes on issues and people in Michigan.

http://www.wtvm.com/story/30170601/public-health-emergency-declared-due-to-lead-in-flint-water

Public health emergency declared due to lead in Flint water

By COREY WILLIAMS, Associated Press

DETROIT (AP) - A public health emergency has been declared in cash-strapped Flint after tests showed the Michigan city's water supply is causing elevated levels of lead in children and following months of complaints about the smell and taste.

Gov. Rick Snyder this week questioned the switch to the Flint River from the Detroit water system in 2014, a decision that was made as a cost-saving move while a new regional pipeline is built to Lake Huron.

And on Thursday, the Genesee County health department declared a public health emergency, recommending that people not drink the water unless it has been filtered and tested to rule out elevated levels of lead. More steps will be announced Friday.

The problem: Although the river water is treated, it is corrosive and releasing lead from old plumbing in thousands of homes.

A coalition of residents and national groups petitioned the U.S. Environmental Protection Agency to order the state to reconnect Flint to Detroit water.

"As evidenced by the ongoing poisoning of the children of Flint, it's time for the

EPA to take immediate action to provide us with a safe water source," LeeAnne Walters, a Flint parent and member of the Water You Fighting For group, said Thursday.

Flint, 60 miles north of Detroit, is among a number of communities that have complained about the rising cost of Detroit's water and sewerage service, which serves about 4 million people in southeastern Michigan. It opted to temporarily use the Flint River until a new line to Port Huron opens in 2016 at an annual cost of $12.5 million.

The decision to break away from the Detroit system was made while a Snyder-appointed emergency manager was running the long-struggling city, which had reached a financial crisis.

"In terms of a mistake, what I would say is we found there are probably things that weren't as fully understood when that switch was made," the governor said Wednesday.

His comments marked a significant shift. In July, a spokesman for the state's Department of Environmental Quality, Brad Wurfel, recommended home tests but added: "Anyone who is concerned about lead in the drinking water in Flint can relax."

Residents are unhappy with the taste, smell and appearance of water from the Flint River and have reported rashes, hair loss and other health concerns that they attribute to it. A General Motors plant stopped using the water because it was causing excessive rust.

Despite the complaints, city officials had said state tests showed the water met federal safety guidelines.

But in September, Virginia Tech researchers released a report saying Flint's water was creating a health threat in old homes that have lead pipes or pipes fused with lead solder. And doctors last week reported high levels of lead in local children's blood samples, also blaming water pipes.

Flint officials say they know which homes have risky pipes but that the information is on about 45,000 index cards and difficult to retrieve.

The city is now telling residents to use only cold water for drinking, cooking and making baby formula, and recommending they use the certified filters. The General Motors Foundation, the local United Way and others have given at least $105,000 to buy filters for 5,000 residents.

Watch live: State to reveal Flint water action plan after lead advisories

By Ron Fonger | rfonger1@mlive.com The Flint Journal

on October 02, 2015 at 11:08 AM, updated October 02, 2015 at 11:24 AM

FLINT, MI -- An action plan for addressing concerns about lead in Flint's drinking water is expected to be outlined by local, state and federal officials at a news conference today.

The Flint Journal-MLive is planning to livestream the news conference in this post. It's expected to start at about 1:30 p.m.

The plan comes after weeks of worrisome news about rising levels of lead in the city's tap water since Flint switched to using the Flint River as its primary source in April 2014.

Gov. Rick Snyder cannot attend the news conference, according to state officials.

Flint's water crisis another example of how Gov. Snyder seems incapable of admitting mistakes

Jack Lessenberry, Michigan Radio • 5 seconds ago

One of the things I most dislike about most politicians is their unwillingness to admit when they've screwed up.

Take Dennis Williams, the leader of the United Auto Workers union. He and his lieutenants were so out of touch with the membership that they negotiated a contract that the angry workers rejected by almost two to one.

Yesterday, when the results were in, Williams said. "We don't consider this a setback," we consider this "part of the process."

Imagine Bo Schembechler saying that after losing.

Of course this was a setback and an embarrassing one; Williams just doesn't have the guts to admit it.

But this pales in comparison to what Governor Rick Snyder said yesterday.

Snyder, even more than most politicians, seems incapable of admitting mistakes.

We saw that in his stubborn clinging for months to Aramark, the appallingly incompetent food service contractor, who he didn't finally fire until long after even his aides urged him to do so. And we are seeing it now in Flint, where people are being poisoned by the water.

A series of terrible decisions were made by a succession of Snyder-appointed emergency managers and the present mayor, Dayne Walling, who is running for reelection.

To save money, Flint stopped buying Detroit water a year and a half ago and switched to Flint River water.

This was clearly a disaster from the start.

The water was often discolored and smelled and tasted bad. It turned out to be full of bacteria.

The city dumped massive amounts of disinfectant in the water, so much so that it turned out to heighten the risk of cancer. Six months ago, Flint city council begged to be allowed to reconnect the city to Detroit's water system. But Jerry Ambrose, the Snyder-appointed emergency manager, refused. Either lying through his teeth or refusing to see reality, he said, "Water from Detroit is no safer than water from Flint."

Since then, we've learned that the Flint River water is so corrosive it is causing lead to leach out of ancient pipes in many homes. Officials have declared a public health emergency. There are now documented cases of infants and small children with lead poisoning from this.

This clearly is as serious a situation as a tornado. The state knows how to react quickly, regardless of cost, in those cases, and it's clear what should happen here.

The governor should use all his powers to reconnect Flint to Detroit's water system and then find a way to pay for it.

He should have done this already. But instead, he's being utterly wishy-washy. Two days ago, asked about Flint River water, he said, "In terms of a mistake, what I would say is we found there are probably things that weren't as fully understood when that switch was made."

He added, in words that would be funny if children weren't being poisoned, "It appears that lead levels could be higher… we're looking at making sure they're within safe limits."

Well, they aren't.

The governor is talking about trying to get people filters.

How about just switching to water that isn't polluted? Yes, that will cost money.

My guess is that a generation of brain-damaged children will cost even more.

State to announce Flint water action plan Friday at Kettering

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 01, 2015 at 8:12 PM, updated October 01, 2015 at 11:12 PM

FLINT, MI — Local, state and federal officials are set to announce a plan for addressing concerns with lead in Flint's drinking water at a news conference Friday, Oct. 2.

An advisory from the Michigan Department of Environmental Quality said leaders will announce the plan at 1:30 p.m. at Kettering University.

The news conference comes after weeks of worrisome news about rising levels of lead in the city's tap water, documented by researchers from Virginia Tech university and a study by a Hurley Medical Center doctor that showed the number of children in the city with elevated blood levels nearly doubled after the city started using the Flint River as its water source in 2014.

Brad Wurfel, director of communications for the DEQ, said Thursday, Oct. 1, that Gov. Rick Snyder cannot attend the news conference.

Snyder said earlier this week that he expected state officials to announce plans to deal with the lead in water issue by Friday, saying, "There are probably some things that weren't as fully understood when that switch was made."

The state oversees water quality in Flint, and state-appointed emergency managers were running city government when decisions were made not to negotiate a short-term agreement to continue buying Lake Huron water from Detroit and to instead use the river as a water source.

Although the city is not currently in violation of the Safe Drinking Water Act, bacteria, the level of total trihalomethanes and lead have been problems in the water system since then.

Among those scheduled to attend the news conference are Mayor Dayne Walling; Harvey Hollins, director of the state Office of Urban Initiatives; Dan Wyant, director of the Michigan DEQ; Nick Lyon, director of the Michigan Department of Health and Human Services; and Dr. Eden Wells, chief medical executive of the state Department of Health and Human Services, the news release said.

Wurfel would not discuss the plan in advance of the news conference, but officials in local, state and the federal government have called for a variety of actions in recent weeks.

Among them: Funding for home water filters, additional testing of city water and reconnection of Flint to the Detroit water system.

"We're looking forward to coming to Flint. We recognize lead is a concern in the city," Wurfel said.

Petition launched for EPA intervention in Flint water crisis

By Amanda Emery | aemery@mlive.com The Flint Journal Follow on Twitter on October 02, 2015 at 8:20 AM, updated October 02, 2015 at 8:21 AM

FLINT, MI -- As the American Civil Liberties Union of Michigan joined a petition urging an immediate federal response to Flint's water crisis, the Greater Flint chapter held its board meeting Thursday to update residents on Flint's water situation.

The petition urges the U.S. Environmental Protection Agency to order Flint to reconnect to the Detroit Water and Sewerage Department system, among other requests.

The board meeting was held Thursday, Oct. 1 at the IINN's Great Lakes Center, 4800 South Saginaw Street in Flint. About 15 people attended the meeting as ACLU of Michigan investigative reporter Curt Guyette talked about the investigation into lead in the water and what's to come.

Woodside Church Pastor Deborah Conrad attended the meeting to get updates on the water situation. Conrad said she is looking to see what can be done to make it better.

"I've been following a lot of the reports, so it was helpful to put it in a context, to hear some new updates," Conrad said. "To hear some fiery rhetoric about the time for indictments, the time for holding people accountable. I worry that filing lawsuits will just drain the tax base of the state, or the city, or the county, but we need some individuals to be held accountable for their role as agents of government acting in individual capacities, frankly in their individual interests and harming the residents of the city."

Guyette said the ACLU was involved in helping coordinate and conduct the tests on residents' water in Flint. He said a partnership with Virginia Tech was born following the testing of water at the home of Flint resident LeeAnne Walters.

A number of groups from the Flint-area have signed on to the petition asking the EPA to take action that will decrease the danger to Flint residents' health from lead contamination in the drinking water.

A recent study by a Hurley Medical Center doctor found more children in Flint have elevated blood lead levels since Flint switched from the Detroit water system to using the Flint River as its primary water source in April 2014.

The groups include the Coalition for Clean Water, Concerned Pastors for Social Change, Water You Fighting For, Democracy Defense League Water Task Force, Flint Water Study Team, Michigan Nurses Association, NAACP - Michigan State Conference, Michigan Chapter of the National Conference of Black Lawyers, American Civil Liberties Union of Michigan, and the Natural Resources Defense Council.

Genesee County Commissioners Brenda Clack, Jamie Curtis and Bryant Nolden, along with Genesee County Health Officer Mark Valacak, held a news conference Thursday, Oct. 1, urging residents to not drink the city's water until it is checked for lead or they have installed an approved water filter.

The warning came just before an announcement that local, state and federal officials will announce a plan for addressing concerns with lead in Flint's drinking water at a news conference Friday, Oct. 2.

An advisory from the Michigan Department of Environmental Quality said leaders will announce the plan at 1:30 p.m. at Kettering University.

Guyette said the next move in the water saga will depend on what comes Friday.

"Well, a lot of that's going to depend on what the governor has to say," Guyette said, adding that there are more questions that need to be answered.

Frustrations have mounted since the water saga unfolded more than a year ago.

An order signed by Genesee County Circuit Court Judge Archie Hayman on Aug. 17, lowered water and sewer rates and halted the city from shutting off water to customers. Since then an average of 100 fewer customers are paying their water bills.

On Thursday during a news conference honoring the Flint Farmers' Market as one of the top six great public spaces on the American Planning Association's annual "Great Places in America" list a scuffle broke out between a water protestor and a market security guard.

City of Flint Spokesman Jason Lorenz said there were a couple of protestors at the market holding up signs. Lorenz said toward the end of the presentation some of the protestors began shouting.

One woman pulled out a bullhorn and security escorted the group out. Lorenz said that is when a scuffle ensued between the woman and the security guard. He said the woman was arrested on assault and battery charges.

In an effort to relieve the frustration and struggle for city residents, a water filter program has been put in place. Women and children receiving public assistance are on the top of the list to receive free water filters.

The announcement came Thursday that the United Way of Genesee County and the city have raised $105,000 from private and public sources to purchase 5,250 water filters for Flint residents.

The filter program announcement comes a week after the director of Hurley Medical Center's pediatric residency program warned in a study that the number of young children with elevated lead in their blood has doubled since the city changed its water source from Lake Huron to the Flint River.

Details on distribution of the filters will be communicated through the Genesee County Health Department Web site as well as a hotline that is in the process of being established.

Residents, ACLU Ask EPA to Take Action on Flint Water

Rick Pluta • 13 hours ago

(MPRN-Flint) The American Civil Liberties Union and some Flint residents are asking the federal government to step in to deal with the city's water crisis.

A complaint filed with the Environmental Protection Agency seeks an order for the city and the state to stop drawing water from the Flint River and re-connect with the Detroit water system.

The switch was ordered by a state-appointed emergency manager to save money. But the Flint River's water is highly corrosive, and caused lead to leach into the city's drinking water.

"There is no level of lead in water that is safe and it's having a devastating impact on the children in the city of Flint," said Michael Steinberg, an attorney with the ACLU. "In an attempt to save money, the emergency manager in Flint, acting in collusion with the state, provided unsafe drinking water to the residents of Flint, and the results have been catastrophic."

State and city officials are expected to outline the next plans to deal with the city's water crisis as soon as tomorrow.

Budget bill add-on awaits future state funds for Flint water

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 01, 2015 at 6:21 PM, updated October 01, 2015 at 6:22 PM

FLINT, MI -- A funding mechanism aimed at the state paying for measures to reduce lead levels in Flint's drinking water has been added to a budget bill in the Michigan Senate.

Jim Ananich, a Flint Democrat and Senate minority leader, successfully sought the placeholder of $100 to the Department of Environmental Quality for emergency water services for Flint.

The amount of the placeholder is expected to be changed after the true cost of the state's contribution is known, and details of that plan could be revealed as soon as Friday, Oct. 2.

"I worked with the administration (of Gov. Rick Snyder) and my colleagues on the Republican side to put a placeholder in place so that when we determine what resources are needed ... to fix the problem, we can go from there," Ananich said after the vote.

Gov. Rick Snyder earlier this week said he expected to announce those measures by Friday after saying "There are probably some things that weren't as fully understood (as should have been) when that switch (in Flint's water source) was made."

Flint changed its drinking water source from Lake Huron to Flint River in April 2014, a decision that came as the city was being run by a state-appointed emergency manager.

The city has struggled to effectively treat that river water since, and a recent study published by a Hurley Medical Center doctor says the number of children and infants with elevated blood lead levels since the change has nearly doubled.

Experiments by Virginia Tech university point to the source of Flint's water as the culprit, showing it is about 19 times more corrosive than the Lake Huron water that had been purchased from the city of Detroit for decades.

Virginia Tech researchers have said that corrosivity, interacting with lead in city service lines, has resulted in higher lead levels in water.

City officials have asked the state for assistance ranging from lead filters for faucets to help paying the Detroit Water and Sewerage Department to reconnect Flint to the DWSD water supply again until the Karegnondi Water Authority pipeline is completed.

The pipeline is expected to be available to service the city and Genesee County at some point in 2016.

Don't drink Flint's water, Genesee County leaders warn

By Jiquanda Johnson | jjohns16@mlive.com The Flint Journal Follow on Twitter on October 01, 2015 at 6:13 PM, updated October 01, 2015 at 11:33 PM

GENESEE COUNTY, MI — Don't drink the water. That's one message Genesee County officials are pushing to residents who get their water supply from the city of Flint.

Genesee County Commissioners Brenda Clack, Jamie Curtis and Bryant Nolden, along with Genesee County Health Officer Mark Valacak, held a news conference Thursday, Oct. 1, urging residents to not drink the city's water until it is checked for lead or they have installed an approved water filter.

The commissioners declared a public health emergency and said they are hoping their declaration will move Gov. Rick Snyder to declare a state of emergency to handle Flint's water crisis.

"This falls directly on the doorstep of the governor," said Nolden. "If we look at what happened with going to the Flint River, this falls smack-dab on the emergency manager and the governor. Now, I think it's imperative that the state step up and help us fix this problem. We're just imploring that the state actively engage and look at ways we can connect to the Detroit River. ... This is a major health situation for this entire community."

Flint Mayor Dayne Walling issued a statement on the commissioners' declaration, saying Flint water customers should filter their water before drinking it.

Commissioners said they have issued various communications with Snyder's office but still haven't heard any word from the governor about the state's plans.

"Flint residents need safe, clean water, and they need accurate information about their health and their homes," said David Murray, Snyder's deputy press secretary, in a statement issued Thursday. "Gov. Snyder has an action plan that builds on existing efforts to help Flint city leaders and their residents. ... It addresses short- and long-term challenges and will keep city residents safe."

A batch of water filters is expected to arrive in the city sometime Friday, Oct. 2. The filters came from the combined efforts of the United Way, city of Flint, General Motors Foundation and a donation from the Making Our Children Smile Foundation. In total, $105,000 was donated to purchase 5,250 water filters — costing about $20 each — for Flint residents.

Valacak said he is hoping officials can start distributing the water filters as early as Friday afternoon, but they are going to focus on high-risk residents, including pregnant women and homes with children.

The county has partnered with the United Way and other community organizations, such as the University of Michigan-Flint, to help distribute the water filters. Valacak said they are looking to have details on distribution as soon as Friday morning, and updates can be found on the Health Department's website.

In addition, the Flint Department of Public Works is offering free water testing for Flint residents.

There are potentially 45,000 homes in the city that may have issues with lead. Clack, Curtis and Nolden represent the majority of the city on the county board. Nolden said his district is primarily in older areas of the city, where the infrastructure is older and residents may be at high risk for lead exposure.

On Tuesday, Sept. 29, the county issued an advisory warning the community of various health hazards associated with lead, including brain damage, stunted growth and hearing problems in children. Valacak said pregnant women and children 5 and younger are especially vulnerable.

Commissioners said they have reached out to Snyder in hopes of him declaring a state of emergency for the city but have not heard back from his office and also said his anonymous donation of 1,500 water filers nearly a month ago shows the governor's office knows there is a problem with Flint's water.

"To me, that's an admission of guilt," Curtis said. "You know there's a problem. ... We're not looking for anybody to point fingers and put the blame. ... We have lead in our water. Let's fix the problem."

Genesee County declares public health emergency

Steve Carmody, Michigan Radio • 13 hours ago

Recent studies have shown blood lead levels in Flint children have doubled, even tripled in some parts of town, since the city started using the Flint River as its drinking water source.

So today Genesee County officials declared a public health emergency.

“We often use the phrase that children are our most valuable resource … then we got to begin acting like they are,” says County Commissioner Brenda Clack.

County commission chairman Jaime Curtis says lead levels in the city of Flint’s water are threatening people’s lives.

“We’ll take water. We’ll take filters. We’ll take money. We’ll take anything to keep our people safe,” Curtis said at a news conference.

The county hopes to start distributing thousands of water filters tomorrow.

The city of Flint issued a lead advisory last week.

Flint Mayor Dayne Walling issued a statement urging people in Flint to follow the guidelines in the county’s public health declaration.

"I encourage the public to follow the guidance in the declaration to use a certified filter, have water testing done, and flush cold water for five minutes before drinking," says Walling.

Tomorrow, a "comprehensive" plan will be announced for dealing with Flint's water crisis.

Who's to blame for Flint's water crisis? Virginia Tech researcher points the finger at MDEQ

Mark Brush, Michigan Radio • 15 hours ago

Yesterday, Gov. Rick Snyder admitted that the decision to switch the city of Flint's water supply from Detroit's system over to the Flint River was not well planned.

"In terms of a mistake, what I would say is, is there are probably things that were not as fully understood as when that switch was made," Snyder said.

At the direction of the state-appointed emergency manager, the city made the switch in April 2014, and problems with the drinking water started soon after.

People complained of brown water. There were boil-water advisories after the water was found to have E. coli contamination, and the drinking water also had unsafe levels of a chlorine byproduct (total trihalomethanes).

Fast forward almost a year and a half, and now we learn some residents in the city are being exposed to unsafe levels of lead in their drinking water. Pediatricians have concluded that the water in Flint is likely poisoning kids.

How could one of Michigan's major cities be facing this problem?

Marc Edwards, a civil engineering professor from Virginia Tech University and a nationally renowned expert on water treatment, has put the blame squarely on the agency in charge of overseeing the safety of Flint's drinking water, the Michigan Department of Environmental Quality.

Edwards published a blog post yesterday in which he writes:

Given MDEQ's insistence that there is absolutely nothing wrong with Flint water, we have created a timeline that illustrates how MDEQ's mistakes and deception created the Flint water crisis in the first place.

In his timeline, Edwards says the state failed to require that the city have a corrosion-control program in place when the city switched over to Flint River water.

"What we discovered to our shock was that they switched to a new water source that was obviously very corrosive, meaning it would eat up the lead pipe and iron pipe and essentially put the metals into the water, without controlling the corrosion," Edwards says. "And this is a horrible idea in a city full of lead plumbing and lead pipe like Flint."

Edwards says current estimates are that Flint has about 15,000 drinking water service lines made of lead.

How dangerous metals can get into drinking water

When water flows through copper and lead pipes, it can take up some of the metal and make the water unsafe. To control for this problem, the Environmental Protection Agency has what's called a "lead and copper rule."

The purpose of the rule is listed in this "quick reference guide:"

Protect public health by minimizing lead (Pb) and copper (Cu) levels in drinking water, primarily by reducing water corrosivity. Pb and Cu enter drinking water mainly from corrosion of Pb and Cu containing plumbing materials.

To keep these metals from leaching into drinking water, municipal treatment plants can change the water chemistry to lower the water's ability to corrode these pipes.

It's called "corrosion control," and Edwards says the Michigan Department of Environmental Quality covered up the fact that Flint had no corrosion control program in place.

"Before you switch to a new water source, six months to a year ahead of time, you are supposed to do laboratory experiments to determine the corrosivity of the water," says Edwards. "And the chemistry – the pH, the alkalinity, and the phosphate that you need to make sure that the lead stays on the pipes and out of the water."

Edwards contends that the new water system had to have a "corrosion control" plan in place so that "you're not doing an uncontrolled human experiment on a city's population."

According to emails obtained by the ACLU of Michigan, a state MDEQ official, Stephen Busch, responded to a request from EPA Region 5, the federal agency that oversees MDEQ, that the new water system in Flint did have a corrosion control program in place.

That exchange occurred in February of this year.

In April, according to the emails, the EPA Region 5 official later found out that was not true. Flint, it turns out, did not have a corrosion-control program in place.

From the emails:

Pat Cook [of MDEQ] has confirmed that following the disconnection from Detroit, Flint has not been operating any corrosion control treatment, which is very concerning given the likelihood of LSLs [lead service lines] in the city.

The state has maintained that it is not required under the EPA's lead and copper rule to have a corrosion-control plan in place until two rounds of testing are completed to determine what that plan looks like.

More from Michigan Radio's Lindsey Smith:

At face value, the EPA rules are clear, all water systems that serve more than 50,000 people must have some kind of corrosion control.

But when you switch water sources, there is apparently some room for interpretation.

In approving updates to this federal regulation in 2000, the EPA noted that "water systems need to make treatment changes, on occasion, to react to changing circumstances."

In these cases, the rule does not “prevent a state from approving treatment changes,” but it’s not entirely clear if the state can approve having zero corrosion-control treatment.

As Edwards understands it, the EPA should have acted once the agency found out the state had no corrosion-control plan in place in Flint.

“If there was ever a case where [the] EPA should exert emergency powers and take primacy away from an agency, this is it,” he said.

Edwards says the city was also not conducting tests for lead and copper properly.

The point of the lead and copper rule is to make sure cities are sampling homes that are high risk – that is, homes serviced by lead pipe.

An ACLU of Michigan investigation found that the city did not know whether it was testing homes serviced by lead pipes.

In this video, Michael Glasgow, the utilities manager for Flint, indicated the city doesn't know where the lead pipes are.

http://www.detroitnews.com/story/opinion/editorials/2015/10/01/editorial-flint-drinkable-water/73172092/

Our Editorial: Get Flint residents drinkable water

The Detroit News 11:32 p.m. EDT October 1, 2015

It doesn't matter if official reports say Flint's water is safe to drink. If residents turn on the tap and the water that comes out is oddly colored — or any color but clear — and stinky, they aren't going to drink it. Nor should they have to.

Flint water customers have been complaining about the smell, taste and color of their water since the spring of 2014, after the city cut its ties to the Detroit Water system and started treating and delivering its own supply.

The move saved Flint about $12 million a year, not an insignificant amount for a city that is under emergency financial management by the state of Michigan because of its shaky finances.

But cheaper water is no bargain if it is undrinkable. And residents of Flint are making a good case that the water the city provides is unfit for human consumption.

Water in the Detroit system is pulled from the depths of Lake Huron and has few contaminants that must be cleansed away at the treatment plant. Flint, for now at least, gets its water from the Flint River, which has endured a century or more of industrial and residential pollution.

Cleansing the river water is a more challenging task, and one Flint has yet to master. Residents have received a string of "boil water" notices due to mistakes made at the plant.

Most worrisome, however, is a new report that indicates elevated levels of lead in Flint children under the age of 5. Lead has a detrimental impact on development, and its increased presence in Flint's kids should not be taken lightly.

The state Department of Environmental Quality insists the water has been thoroughly tested and is safe.

But, again, residents who see and smell foul water coming from their tap can be forgiven if they doubt those assurances.

Gov. Rick Snyder, working with an unnamed private donor, recently distributed about 1,500 filters to Flint water customers. The filters remove chemical compounds as well as lead.

That seems a good temporary solution at least. But thousands more are needed. State Sen. Jim Ananich, a Democrat from Flint, is asking the state to find the funds for 15,000 filters to distribute to all water system customers.

That is a reasonable request, and may bridge residents until next year, when the city is expected to connect to a new regional water pipeline from Lake Huron.

The other option is to reconnect to the Detroit water system.

Whatever choice is made, the solution should be put in place quickly. If the elevated lead levels discovered by pediatricians at the Hurley Medical Center are linked to the water supply, then this is a public health emergency that demands an urgent response.

Flint residents are paying for water, and have the right to expect it to be clean and drinkable. They should not have to spend additional money each month to purchase bottled water.

The decision to disconnect Flint from Detroit water lines was made under the state's watch. The state has a responsibility to find a fix, and soon.

Efforts to get the lead out of Flint's water awash in finger-pointing

BY JACK LESSENBERRY

BLADE OMBUDSMAN

FLINT, Mich. — Residents here haven't yet marched on city hall or the governor's office with pitchforks and blazing torches. But if they did, a lot of people might not blame them.

Flint has plenty of troubles: devastating job and population losses, plummeting property values, and a succession of emergency managers over the past four years.

The latest outrage is about water. Water that is discolored and foul-smelling. Water that at first had too much bacteria and then too much disinfectant.

And water that now seems to be causing lead poisoning in some of Flint's children. One woman, whose husband works as a policy planner for city government, said her spouse was "in tears as a new father himself when an irate resident came in with her premature, lead-poisoned baby."

Flint's water saga goes back to last year, when officials announced that their cash-strapped city could no longer afford to buy water from Detroit.

They announced they would join a new consortium, the Karegnondi Water Authority, which would supply purified water from Lake Huron. But Karegnondi's operation won't be up and running until sometime the following year.

So Flint officials announced that in the meantime, they would supply residents with treated water from the Flint River. But that turned into a disaster from almost day one. There were reports that the water was discolored and foul-tasting.

When tests showed that the water was dangerously contaminated with bacteria, including the infamous E. coli, the city pumped chlorine into the water.

That backfired too: In January, residents were told their water didn't meet federal safety standards, this time because of the chlorine.

While it may have killed the bacteria, it left the water with high levels of trihalomethane (TTHM), which is thought to increase the chances of developing cancer.

Average levels of TTHM didn't become acceptable until late this summer. Then Flint had a terrifying new problem: lead poisoning.

Last week, a study by physicians at Hurley Medical Center in Flint showed that the tap water in Flint has resulted in significantly elevated levels in the blood of the city's children. The scientists said the lead isn't actually in the water, but that the river water itself was more corrosive than the lake water Flint had been buying from Detroit.

A team from Virginia Tech tested samples last month from 300 homes, and found what it called "seriously" high levels of lead. The Hurley study found the percentage of children with seriously elevated lead levels had almost doubled.

That got politicians' attention. Mayor Dayne Walling advised residents to use only cold water, let it run from the tap for five minutes, and buy a filter for lead removal. The mayor also asked Gov. Rick Snyder to come up with $30 million to fix the water system and replace lead pipes.

City officials say about half the customers in Flint may be facing a problem, because the transmission lines connecting them to city water mains are made with lead.

The mayor's request for money from the governor wasn't good enough for the editorial board of the Flint Journal, the city's newspaper. When the news of lead poisoning surfaced, it ran an editorial saying "it's time to abandon the Flint River" as a drinking water source.

"We call on the governor to make this right for Flint citizens by brokering a return to Detroit water that won't bankrupt the city of Flint," the editorial said. It added: "Flint is in a crisis that was created in no small part by Snyder's hand-picked emergency manager, and it is Snyder's job to fix this mess."

Yet the governor has shown no signs of doing any such thing.

Pat Clawson, a longtime Flint area resident and former investigative reporter, thinks his city's plight should be a national scandal. "They are poisoning the people with this water — poisoning them, and that's what the doctors call it among themselves," he told me.

He puts the lion's share of the blame on Mayor Walling, who he says "was involved in planning and promoting the switch to Flint River water from the start."

But Mr. Clawson says there is plenty of blame to go around: "I believe there is criminal culpability on the part of public officials for causing and concealing this crisis."

He urged the federal and state governments to convene grand juries to investigate. Whether that will happen is anyone's guess. Meanwhile, the agony continues for the 99,000 folks who still live in the once-prosperous city of Flint.

Jack Lessenberry, a member of the journalism faculty at Wayne State University in Detroit and The Blade's ombudsman, writes on issues and people in Michigan.

http://www.wtvm.com/story/30170601/public-health-emergency-declared-due-to-lead-in-flint-water

Public health emergency declared due to lead in Flint water

By COREY WILLIAMS, Associated Press

DETROIT (AP) - A public health emergency has been declared in cash-strapped Flint after tests showed the Michigan city's water supply is causing elevated levels of lead in children and following months of complaints about the smell and taste.

Gov. Rick Snyder this week questioned the switch to the Flint River from the Detroit water system in 2014, a decision that was made as a cost-saving move while a new regional pipeline is built to Lake Huron.

And on Thursday, the Genesee County health department declared a public health emergency, recommending that people not drink the water unless it has been filtered and tested to rule out elevated levels of lead. More steps will be announced Friday.

The problem: Although the river water is treated, it is corrosive and releasing lead from old plumbing in thousands of homes.

A coalition of residents and national groups petitioned the U.S. Environmental Protection Agency to order the state to reconnect Flint to Detroit water.

"As evidenced by the ongoing poisoning of the children of Flint, it's time for the EPA to take immediate action to provide us with a safe water source," LeeAnne Walters, a Flint parent and member of the Water You Fighting For group, said Thursday.

Flint, 60 miles north of Detroit, is among a number of communities that have complained about the rising cost of Detroit's water and sewerage service, which serves about 4 million people in southeastern Michigan. It opted to temporarily use the Flint River until a new line to Port Huron opens in 2016 at an annual cost of $12.5 million.

The decision to break away from the Detroit system was made while a Snyder-appointed emergency manager was running the long-struggling city, which had reached a financial crisis.

"In terms of a mistake, what I would say is we found there are probably things that weren't as fully understood when that switch was made," the governor said Wednesday.

His comments marked a significant shift. In July, a spokesman for the state's Department of Environmental Quality, Brad Wurfel, recommended home tests but added: "Anyone who is concerned about lead in the drinking water in Flint can relax."

Residents are unhappy with the taste, smell and appearance of water from the Flint River and have reported rashes, hair loss and other health concerns that they attribute to it. A General Motors plant stopped using the water because it was causing excessive rust.

Despite the complaints, city officials had said state tests showed the water met federal safety guidelines.

But in September, Virginia Tech researchers released a report saying Flint's water was creating a health threat in old homes that have lead pipes or pipes fused with lead solder. And doctors last week reported high levels of lead in local children's blood samples, also blaming water pipes.

Flint officials say they know which homes have risky pipes but that the information is on about 45,000 index cards and difficult to retrieve.

The city is now telling residents to use only cold water for drinking, cooking and making baby formula, and recommending they use the certified filters. The General Motors Foundation, the local United Way and others have given at least $105,000 to buy filters for 5,000 residents.

US EPA will continue to provide technical assistance to the State of Michigan and the City of Flint to support their joint effort.

1. What about the interim report that has been attributed to a "rogue" EPA employee? The interim report was prepared by a Region 5 employee as part of his regular duties at EPA. It was intended to be an internal document to brief EPA managers on lead levels in drinking water at three residential properties in Flint. The interim report notes that a "final report will be submitted once additional analyses have been completed on pipe and water samples." **Has a final report been prepared?** Yes. **Can I get a copy of the report?** The report contains Personally Identifiable Information and other confidential health data. If a FOIA request is submitted for the document, EPA attorneys will determine the extent to which a redacted document can be released. **Why was the interim report released without redaction?** EPA did not release the interim report to the public.

2. What about the SDWA petition that was submitted to EPA on 10/1/2015? EPA will review the petition.

3. Are all large drinking water systems required to implement corrosion control? OGC to draft answer consistent with the discussion earlier today.

Statement by Congressman Dan Kildee on Flint Water State Action Plan

After being briefed this morning by state officials, Congressman Dan Kildee (MI-05) issued the following statement today on the state's new efforts to ensure the safety *of Flint's drinking water:*

"The lead levels recently reported in Flint's water are unacceptable and could cause irreversible adverse health effects, particularly among children. Flint residents deserve safe water and immediate assistance. That's why it is absolutely necessary that the state's efforts announced today be implemented immediately.

"Specifically, corrosion control needs to be started now. To date, corrosion control treatment has not been started in the Flint water system. Experts acknowledge that corrosion control treatment takes time once introduced – weeks or even months – to move throughout the water distribution system and fully take effect. Thus, delaying corrosion control treatment will only delay improving the water quality.

"In the interim, it is imperative that every Flint resident who needs a lead-clearing filter gets one. Since there is already an ongoing community effort to distribute filters in addition to state resources announced today, it is critical that the state work with local leaders on the ground to coordinate efforts.

"I'm calling on all parties involved to adopt a greater sense of urgency than I've seen demonstrated thus far. I will continue to work with city and state officials on immediate and long term solutions to improve the quality of Flint's water."

Subject: RE: STATEMENT: Congressman Dan Kildee on Flint Water State Action Plan

I talked to Sen. Ananich's office and they could not find in state law where it prevents the SRF from being used for lead line replacement on private property. In fact, in this guidance document it says that SRF funds CAN be used for private lead service line replacement. I was wondering if you knew where in the statute it said this?

http://www.michigan.gov/documents/deq/deq-ess-mfs-formsguidance-DWeligguide_248792_7.pdf

On page 19 it says:

The installation of service lines located within a public right of way (commonly referred to as “stubs” or “customer service connections”) are eligible for DWRF assistance. The installation of service lines from the “stub” to the privately-owned home or building will not be eligible for DWRF assistance unless that portion of the service line is also owned by the water supplier or it’s a lead service line that needs to be replaced as discussed below.

The installation of water meters for a new waterworks system or an existing unmetered system is eligible for DWRF assistance, provided the meters are owned by the water supplier. The replacement or upgrading of existing water meters is also allowable if adequate need has been demonstrated in the project plan. An example would be upgrading meters to have remote read capabilities. While ancillary costs such as providing the meter reading equipment is eligible, billing software to process the information obtained from the meters is not eligible.

Effective January 30, 2006, the replacement of lead water service laterals, both the public and the privately-owned portions, are eligible for DWRF assistance if necessary to comply with the March 2005 Lead and Copper Rule. The four main functions of the Rule are:

A. Require water suppliers to optimize their treatment systems to control corrosion in customer’s plumbing.

B. Determine tap water levels of lead and copper for customers who have lead service lines

or lead-based solder in their plumbing systems.

C. Rule out the source water as a source of significant lead levels.

D. If action levels are exceeded (i.e., 15 ppb), require the suppliers to educate their

customers about lead and suggest actions they can take to reduce their exposure to

lead through public notices and public education programs. If a water system, after

installing and optimizing corrosion control treatment, continues to fail to meet the lead

action level, it must begin replacing the lead service lines under its ownership.

The need for lead service line replacement due to an action level exceedance must be

discussed in the project plan.

Water crisis in Flint declared

Officials have declared a health emergency in Flint, Michigan, due to high lead content in the water.

Last Updated Oct 2, 2015 1:47 PM EDT

A public health emergency has been declared in cash-strapped Flint, Michigan, after tests showed the city's water supply is causing elevated levels of lead in children, following months of complaints about the smell and taste.

Michigan Gov. Rick Snyder announced Friday that the state will spend $1 million to buy water filters and immediately test water in public schools in Flint. He also announced expanded health exposure testing, continued free water testing, and quicker steps to ensure that water from the Flint River is effectively treated.

The problems arose after the city broke away from Detroit's water system in 2014 and began taking water from the Flint River to save money, pending the completion of a new regional pipeline in 2016.

On Thursday, the Genesee County health department declared a public health emergency, recommending that people not drink the water unless it has been filtered and tested to rule out elevated levels of lead. More steps will be announced Friday.

County Commissioner Brenda Clack told residents that infants and children should not use the water coming from the taps in the city of Flint.

"Individuals who have respiratory conditions should not use the water, pregnant women should not use the water - it's imperative that they not use the water," she urged.

The problem: Although the river water is treated, it is corrosive and releasing lead from old plumbing in thousands of homes.

A coalition of residents and national groups petitioned the U.S. Environmental Protection Agency to order the state to reconnect Flint to Detroit water.

"As evidenced by the ongoing poisoning of the children of Flint, it's time for the EPA to take immediate action to provide us with a safe water source," LeeAnne Walters, a Flint parent and member of the Water You Fighting For group, said Thursday.

Flint, 60 miles north of Detroit, is among a number of communities that have complained about the rising cost of Detroit's water and sewerage service, which serves about 4 million people in southeastern Michigan. It opted to temporarily use the Flint River until a new line to Port Huron opens in 2016 at an annual cost of $12.5 million.

The decision to break away from the Detroit system was made while a Snyder-appointed emergency manager was running the long-struggling city, which had reached a financial crisis.

"In terms of a mistake, what I would say is we found there are probably things that weren't as fully understood when that switch was made," the governor said Wednesday.

His comments marked a significant shift. In July, a spokesman for the state's Department of Environmental Quality, Brad Wurfel, recommended home tests but added: "Anyone who is concerned about lead in the drinking water in Flint can relax."

Residents are unhappy with the taste, smell and appearance of water from the Flint River and have reported rashes, hair loss and other health concerns that they attribute to it. A General Motors plant stopped using the water because it was causing excessive rust.

Despite the complaints, city officials had said state tests showed the water met federal safety guidelines.

But in September, Virginia Tech researchers released a report saying Flint's water was creating a health threat in old homes that have lead pipes or pipes fused with lead solder. And doctors last week reported high levels of lead in local children's blood samples, also blaming water pipes.

Flint officials say they know which homes have risky pipes but that the information is on about 45,000 index cards and difficult to retrieve.

The city is now telling residents to use only cold water for drinking, cooking and making baby formula, and recommending they use the certified filters. The General Motors Foundation, the local United Way and others have given at least $105,000 to buy filters for 5,000 residents.

"It's our intention to begin the distribution of those as soon as possible," Genesee County Health Officer Mark Valacak said. "This community always comes together no matter what the challenge, and this is yet another challenge but we are fortunate in having a number of community members who have come to the forefront."

CBS/AP

State to tackle unsafe water in Flint with tests, filters

By Kathleen Gray and By Robin Erb, Detroit Free Press 4:49 p.m. EDT October 2, 2015

Buy Photo

Flint resident Nayyirah Shariff holds a shovel while protesting outside of the Kettering University Innovation Center in Flint on Friday, Oct. 2, 2015, during an announcement of an action plan for Flint drinking water following warnings of high levels of lead in the water.(Photo: Ryan Garza, Detroit Free Press)Buy Photo

State officials unveiled a 10-point plan today to address Flint's controversial water system that will include free testing of water, $1 million for water filters for residents and complete anti-corrosion treatment of the city's water system, plagued for the past year by smelly, discolored water and now reports of increased lead levels in pipes.

"We know that many residents .. have lost confidence in the drinking water, and we need to bring that back," said Dan Wyant, director of the Michigan Department of Environmental Quality.

Officials sought to clarify once again that the lead in the water is not from the Flint River, but from lead pipes in residents' homes and service lines.

"This is an important issue and I want to make sure that people are working well together to address this," Gov. Rick Snyder said in a briefing with reporters shortly before an afternoon news conference. "We all have a concern abut Flint's drinking water in terms in what we're seeing on lead."

The state's plan includes:

- Immediate testing of the water in Flint public schools, with a goal to reassure parents and students that the water is safe, Wyant said.
- Expanding testing of individuals to determine levels of lead.
- Offering free water testing to Flint residents and the state setting aside $1 million for free water filters for city residents.
- Requiring and expediting additional corrosion controls in the city's water system to minimize any leaching of lead into the city's water.
- Creating a safe drinking water technical advisory committee in conjunction with the U.S. Environmental Protection Agency.
- A long-term acceleration of plans to replace old lead service lines.
- Expediting the completion of the Karagondi water system into the city by making sure that permit applications are handled quickly and helping the city identify workers for a second shift at the new water system.

With reporters packed into a small room and about two dozen protesters outside — "Not your lab rats" read one sign — the head of the Michigan Department of Health and Human Services, Nick Lyon, said the "utmost priority" of the state is to protect children from lead.

"There is no safe level of lead," added Dr. Eden Wells, the department's chief medical executive.

It's a sharp departure from recent state assurances that any bump in blood-lead levels could be attributed to predictable monthly fluctuations.

But that's because of findings released last week by a Hurley Medical Center pediatrician. Dr. Mona Hanna-Attisha found that the number of Flint children with elevated blood-lead levels — 5 micrograms per deciliter or more — jumped from 2.1% in the 20 months prior to Sept. 15, 2013, to 4.0% between January 1 and September 15 this year. In certain ZIP codes, the change was even more troubling, she said — jumping from 2.5% of the children tested to 6.3%.

Those findings helped prompt Genesee County to issue an emergency advisory to Flint residents, advising them to refrain from drinking city water unless it is filtered through a certified filtration device or had been tested and showed that it doesn't contain elevated lead levels.

"Since no safe level (of lead) has been identified, it is in everyone's interest to reduce exposure to lead as much as possible," the emergency advisory stated.

Officials earlier today acknowledged it was Hanna-Attisha's work that had them second-guessing their first reading of data. When they focused in on certain zip codes, the worrisome lead level increases became clearer, Wells said.

"There's no doubt that new testing data is justifying these actions," Wyant told The Free Press after the news conference.

In fact, state testing of lead levels in children confirmed what Hanna-Attisha found: that children in two troublesome zip codes have lead levels in their blood that are 3.2% higher than the rest of Genesee County since the water system switch was made. Lead levels in children throughout Flint are two times higher than the rest of Genesee County, but that number didn't go up after the water switch was complete, Wells said.

Snyder, in the earlier phone conference with reporters, said that talks are continuing on the possibility of reconnecting the city to Detroit's water system.

"We've had active discussions during the week and hopefully we can fully understand the issue in terms of the costs and benefits," he said. "This is being done in the next few days."

The state has been testing the city's water since it switched from the Detroit Water and Sewerage Department to pulling water from the Flint River.

DETROIT FREE PRESS

Legislators take action to fix Flint water supply

"We've been following established protocols in terms of testing the water itself when it's in the plant and when it goes into the system and what we've found is that the water is safe. And it meets all federal guidelines in terms of lead," Snyder said. "But the real concern is where it ends up in peoples' homes. A lot of homes still have lead pipes and it appears from the data that there are some serious issues and concerns about what happens when the water reaches the homes."

DETROIT FREE PRESS

For Flint, vindication -- for Snyder, more questions

During routine quarterly testing of Flint's water in December, the lead level was 6 parts per billion, well below federal guidelines of 15 parts per billion. Testing in the summer showed that level had risen to 11 parts per billion, still below the federal action level, but the state sent a letter to Flint in August saying that it needed to expand corrosion controls in the system to make sure lead wasn't leaching from public and private pipes into residents' homes.

Buy Photo

In 2014, city officials ended the city's contract with the Detroit Water and Sewerage Department, saying that water costs were too high. They opted instead to pull from the Karegnondi Water Authority, which is building a system to supply Genesee County with water pulled from Lake Huron. In the long run, this will mean lower water costs, officials have said, adding that water from the Detroit system will cost $1.5 million more a month than the city is paying now.

But until the new system comes online in 2016, Flint is temporarily pulling water from the Flint River. Since it made the switch, residents have complained that the water smells, is discolored and makes them sick.

Governor's plan for lead in Flint water includes free tests, $1M in filters

City and State officials announce action plan for Flint water

Dan Wyant, director of the Michigan Department of Environmental Quality speaks as city and state officials announce an action plan to deal with lead levels in Flint's drinking water during a news conference on Friday, Oct. 2, 2015, at Kettering University in Flint, Mich. The action plan includes immediate testing of water in Flint's public schools and providing water filters for concerned residents. Danny Miller | MLive.com

Gov. Rick SnyderMLive.com file photo

FLINT, MI -- The state is committing up to $1 million to purchase water filters for Flint, part of an action plan being unveiled today, Oct. 2, to address concerns about lead levels in the city's drinking water.

The plan includes immediate testing of water at Flint schools at state expense, expansion of lead exposure testing for individuals and expediting treatment of Flint water to better control corrosion, officials said. The plan is being outlined at a news conference at Kettering University.

Related: Watch live as state unveils action plan for Flint water

Although the plan does not call for a reconnection of Flint to Lake Huron water through the Detroit Water and Sewerage Department, Gov. Rick Snyder said in a conference call with reporters that it remains an option that is being studied.

The state's plan for addressing lead levels in city tap water comes 17 months after the city changed the source of its drinking water from the Detroit system to the Flint River while a regional pipeline to serve the greater Genesee County area is being built from Lake Huron.

A Hurley Medical Center doctor's study that was released this month showed the number of children in the city with elevated blood levels nearly doubled after the city started using the river as a water source in 2014 and nearly tripled in two "high-risk" ZIP codes: 48503 and 48504.

State officials initially questioned the Hurley data, as well as testing by Virginia Tech university researchers that showed higher lead in water levels than city testing has shown.

But the chief medical executive for the state confirmed today that the state's own data is consistent with the Hurley study for those two ZIP codes 48503 and 48504.

Lead levels of children in those zip codes were 2.7 times higher than the rest of Genesee County while Flint was still using Lake Huron water, and it was 3.2 times higher after the switch to the river, said Dr. Eden Wells, chief medical executive for the Michigan Department of Health and Human Services.

Snyder was not expected to be at today's news conference but said state officials have "a concern about Flint's drinking water in terms of what we see in terms of lead."

The governor and Department of Environmental Quality Director Dan Wyant said the city's water is lead free when it leaves the treatment plant and said the state has followed established protocols for testing at the plant and inside Flint homes.

"There is a real concern and issue (with lead in water once) it ends up in people's homes," Snyder said.

The plan introduced today is designed to address the lead concerns.

In addition to the funding for filters and the water testing at schools, it includes:

•□□□□□□□□ Expanded lead exposure testing

•□□□□□□□□ Continued free testing of water in homes

•□□□□□□□□ Assistance with expediting completion of the Karegnondi Water Authority pipeline from Lake Huron

•□□□□□□□□ Stepped-up implementation of water treatment designed to better control corrosion

•□□□□□□□□ And help accelerating improvements to the water system -- potentially including lead service lines

The governor said the state is "very expeditiously" considering the benefit of switching Flint's water source back to the Detroit system but said that review is not complete.

Snyder called a connection to Detroit water "an alternative" that remains possible.

>>
>> http://www.michigan.gov/documents/deq/deq-ess-mfs-formsguidance-DWeligguide_248792_7.pdf

On page 19 it says:

The installation of service lines located within a public right of way (commonly referred to as

“stubs” or “customer service connections”) are eligible for DWRF assistance. The installation of

service lines from the “stub” to the privately-owned home or building will not be eligible for

DWRF assistance unless that portion of the service line is also owned by the water supplier or

it’s a lead service line that needs to be replaced as discussed below.

The installation of water meters for a new waterworks system or an existing unmetered system

is eligible for DWRF assistance, provided the meters are owned by the water supplier. The

replacement or upgrading of existing water meters is also allowable if adequate need has been

demonstrated in the project plan. An example would be upgrading meters to have remote read

capabilities. While ancillary costs such as providing the meter reading equipment is eligible,

billing software to process the information obtained from the meters is not eligible.

Effective January 30, 2006, the replacement of lead water service laterals, both the public and

the privately-owned portions, are eligible for DWRF assistance if necessary to comply with the

March 2005 Lead and Copper Rule. The four main functions of the Rule are:

A. Require water suppliers to optimize their treatment systems to control corrosion in

customer's plumbing.

B. Determine tap water levels of lead and copper for customers who have lead service lines

or lead-based solder in their plumbing systems.

C. Rule out the source water as a source of significant lead levels.

D. If action levels are exceeded (i.e., 15 ppb), require the suppliers to educate their

customers about lead and suggest actions they can take to reduce their exposure to

lead through public notices and public education programs. If a water system, after

installing and optimizing corrosion control treatment, continues to fail to meet the lead

action level, it must begin replacing the lead service lines under its ownership.

The need for lead service line replacement due to an action level exceedance must be

discussed in the project plan.

Hi Jennifer,

You are correct that there is an error. Detroit did install corrosion control in the 1990s, it was demonstrated as optimized and in 1999 we established water quality parameters for the city.

We plan to review the SDWIS entries and make corrections as needed before the next data submission.

Thanks!

Subject: Detroit data in SDWIS

Hi, Kris. We were looking at Detroit data in SDWIS this morning, and I'm not sure about some data—see below. Under "Event Milestone Description", it says about Detroit "System deemed optimized without

Optimal Corrosion Control Treatment (OCCT)", and the reason was "B3", which is Michigan rule 604f(2)(b)(iii). But I thought that Detroit did exceed the PQL (5ppb) back in the early 90's and that the City did install CCT, so it can't be a B3. Detroit used the Modified Consecutive System approach in the early 90's to collect data from all the sampling at consecutive systems, so it could evaluate the water as a single system. So, I think the above 2 data entries (seen below) are incorrect?

Thank you, Kris.

Detroit and consecutives OCCT Designations.pdf
Chicago and consecutives OCCT Designations.pdf

Hi all,

Attached are the OCCT designations for the Chicago interconnected systems and the Detroit interconnected systems.I asked Andrea to pull the SDWIS data for these two groups of systems (thank you kindly, Andrea!)

All large consecutive systems in the Chicago interconnection are appropriately designated as "system deemed optimized without OCCT" with a reason code of WQP (meaning OWQPs have been designated for them). Chicago's OCCT designation is incorrect (system designated optimized without treatment) and should be updated.

All of the large systems in the Detroit interconnection are also designated as "system deemed optimized without OCCT" but they all have a reason code of '(b)(3)'. DEQ has acknowledged that the Detroit reason code of '(b)(3) is incorrect. It should be WQP and they will fix that in the next update. For whatever reason, Flint does not have anything reported for either the designation code or reason code.

Subject: flint: email chain between steve busch and yanna --> does this help with your response to jeff?

Hi Miguel,

Can you use the email chain below to help respond to Jeff?

Especially this excerpt from Steve Busch (with his incorrect interpretations of LCR, along with his claim that Flint is not designated as having OCCT – meaning it's definitely not b3):

"Michigan has implemented an EPA approved modified consecutive system approach to lead and copper monitoring where a wholesale water supply sells water to other community water systems. In addition, while water quality parameter (WQP) monitoring occurs at both the water treatment plant and in the combined distribution system, a WQP range is only required to be established at the water treatment plant tap after the system has demonstrated optimized corrosion control treatment (OCCT).

Thus when the City of Flint was a customer of the Detroit Water and Sewerage Department (DWSD), the City of Flint participated in WQP monitoring of its distribution system, but ranges were established only for the OCCT at DWSD treatment plants. The attached letter from our Department established the minimum levels for pH and phosphate dosage in 2000.

As the City of Flint water treatment plant has not yet installed such treatment or been given the designation of OCCT these plant tap values have not been established.

However, the City of Flint WTP has continued to maintain the minimum pH value requirement previously established for DWSD

As noted in your Working Group Report to the NDWAC, "Corrosion Control Treatment (CCT) involves the addition of chemicals (e.g. orthophosphates or silicate) to create a barrier between the pipes and the drinking water, or to modify drinking water chemistry (such as pH and hardness) to inhibit the potential for corrosion."

Should you consider the Flint WTP softening process to be OCCT, then the City already continues to comply with the OCCT requirements as the City of Flint has never had 10% or more of compliance tap samples exceed the 15 ppb action level. Even prior to DWSD's established OCCT the City of Flint lead compliance monitoring has never exceeded the 15 ppb action level."

Let me know if there's more I can dig up for you.

Thanks,

Andrea Porter

Subject: Re: question about optimal WQP ranges for Flint's water

Dear Mr. Busch,

I appreciate your response.

Would you be able to send me a copy of the modified consecutive system approach to lead and copper monitoring that EPA approved?

I am sorry I cannot route my question through the NDWAC or my WG. I am not a NDWAC member, and my WG disbanded when our final report was completed back in August. I apologize if I have caused any confusion. The questions I am posing come solely from me because I am in the process of writing a dissenting opinion about the NDWAC LCR WG recommendations that is due to EPA in a couple of weeks. One of the main reasons I am writing this opinion is because of concerns I have about the LCR's CCT requirement. Your experience with and implementation of the LCR in Flint is extremely helpful to me in deepening my understanding about the LCR's CCT requirement and will undoubtedly allow me to write a more informed discussion.

I thank you in advance for your help on this matter and your support of ongoing efforts to assess the LCR carefully and thoroughly.

Kindly,

Yanna Lambrinidou

Subject: RE: question about optimal WQP ranges for Flint's water

Dr. Lambrinidou,

I'm sorry for the delay in my response. As some of your questions relate more to statewide program implementation I have requested assistance with the response from staff within our central program office. However, these staff were attending and participating in an offsite (American Water Works Association Conference Michigan Section) conference last week.

Michigan has implemented an EPA approved modified consecutive system approach to lead and copper monitoring where a wholesale water supply sells water to other community water systems. In addition, while water quality parameter (WQP) monitoring occurs at both the water treatment plant and in the combined distribution system, a WQP range is only required to be established at the water treatment plant tap after the system has demonstrated optimized corrosion control treatment (OCCT).

Thus when the City of Flint was a customer of the Detroit Water and Sewerage Department (DWSD), the City of Flint participated in WQP monitoring of its distribution system, but ranges were established only for the OCCT at DWSD treatment plants. The attached letter from our Department established the minimum levels for pH and phosphate dosage in 2000.

As the City of Flint water treatment plant has not yet installed such treatment or been given the designation of OCCT these plant tap values have not been established.

However, the City of Flint WTP has continued to maintain the minimum pH value requirement previously established for DWSD

As noted in your Working Group Report to the NDWAC, “Corrosion Control Treatment (CCT) involves the addition of chemicals (e.g. orthophosphates or silicate) to create a barrier between the pipes and the drinking water, or to modify drinking water chemistry (such as pH and hardness) to inhibit the potential for corrosion.”

Should you consider the Flint WTP softening process to be OCCT, then the City already continues to comply with the OCCT requirements as the City of Flint has never had 10% or more of compliance tap samples exceed the 15 ppb action level. Even prior to DWSD’s established OCCT the City of Flint lead compliance monitoring has never exceeded the 15 ppb action level.

If you have additional questions we would appreciate having them routed through the NDWAC and your Working Group. Thanks.

Subject: Re: question about optimal WQP ranges for Flint's water

Dear Mr. Busch,

Thank you for your quick response. I appreciate the information at, I am sure, a very busy time for you and MDEQ.

Could you please help me understand the following?

When you say that all previous optimal water quality parameter ranges would have been established for the Detroit water utility (not for the City of Flint), do you mean that MDEQ never set optimal water quality parameter ranges *specifically* for Flint before Flint's switch to Flint River water?

It is my impression, please correct me if I'm wrong, that under the LCR, all large systems -- whether they are consecutive or not -- must have optimal water quality parameter ranges designated by states *specifically for them* (at the time when these systems are deemed to have optimized their treatment). Is there language in the LCR I am missing that allows a utility not to have optimal quality parameter ranges established specifically for it?

My second question is this: If the City of Flint had no optimal water quality parameter ranges established specifically for it in the past, how did it achieve LCR compliance? Isn't it the case that utility-specific optimal water quality parameter ranges (and maintenance of these ranges) are required for all large systems to avoid an LCR violation?

I would appreciate your assistance on this matter, as it will shed light on an issue that seems to be very important for EPA's assessment of and upcoming revisions to the LCR.

Kindly,

Dr. Lambrinidou,

All previous water quality parameter ranges would have been established for the City of Flint's wholesale finished water supplier, the Detroit Water and Sewerage Department, not the City of Flint itself.

As the City of Flint has not yet established optimized corrosion control treatment, the MDEQ is not yet at the point of regulatory requirements where the range of water quality parameters would be set.

Subject: RE: Flint Corrosion Control?

Hi Miguel - sorry, I should have been more specific in my previous email. The rules you stated below allow large systems to be considered having optimal corrosion control if they have data from two consecutive 6 month monitoring periods that meet specific criteria. DEQ-ODWMA has not made a formal decision as to whether or not the City of Flint meets the exemption criteria or will be required to do a corrosion control study since Flint has only completed one round of 6 month monitoring. The City of Flint's second round of monitoring will be completed by June 30, 2015, and we will make a formal decision at that time. If my memory is correct, this is consistent with the process followed in the early 1990's for large systems when the Pb/Cu rule was first implemented. The Department waits until large systems complete both rounds of full scale, 6 month monitoring before making a decision about optimal corrosion control. If it is determined that Flint has to install corrosion control treatment, the rule allows up to 2 years to complete a study and 2 additional years to install the treatment unless we set a shorter time frame.

As Flint will be switching raw water sources in a just over one year from now, raw water quality will be completely different than what they currently use. Requiring a study at the current time will be of little to no value in the long term control of these chronic contaminants.

Finally, the City of Flint's sampling protocols for lead and copper monitoring comply will all current state and federal requirements. Any required modifications will be implemented at the time when such future regulatory requirements take effect.

Subject: Re: Flint Corrosion Control?

Hi Pat,

I'll be heading out to MI for RTCR tomorrow and won't see email until next Tuesday, but I wanted to follow up on this because Flint has essentially not been using any corrosion control treatment since April 30, 2014 and they have LSLs. Given the very high lead levels found at one home and the pre-flushing happening at Flint, I'm worried that the whole town may have much higher lead levels than the compliance results indicated, since they are using pre-flushing ahead of their compliance sampling.

If the source water lead is non-detect (zero), then according to 141.89(a)(3) they should use zero for that source water value:

"All lead and copper levels measured between the PQL and MDL must be either reported as measured or they can be reported as one-half the PQL specified for lead and copper in paragraph (a)(1)(ii) of this section. All levels below the lead and copper MDLs must be reported as zero."

As far as the treatment determination, there are only two scenarios for a large system to be deemed to have optimized corrosion control without treatment and Flint does not appear to meet either:

The first is at 141.81(b)(3)

Any water system is deemed to have optimized corrosion control if it submits results of tap water monitoring conducted in accordance with § 141.86 and source water monitoring conducted in accordance with § 141.88 that demonstrates for two consecutive 6-month monitoring periods that the difference between the 90th percentile tap water lead level computed under §141.80(c)(3), and the highest source water lead concentration is less than the Practical Quantitation Level for lead specified in § 141.89(a)(1)(ii).

If Flint's highest source water lead was zero, and their 90th percentile was 0.006, then Flint does not meet this criteria, because the difference must be LESS THAN the PQL (i.e., 0.004 or less). 0.006 - 0 = 0.006.

The second is at 141.81(b)(3)(i):

Those systems whose highest source water lead level is below the Method Detection Limit may also be deemed to have optimized corrosion control under this paragraph if the 90th percentile tap water lead level is less than or equal to the Practical Quantitation Level for lead for two consecutive 6-month monitoring periods.

Although Flint's source water lead was non-detect (zero), the 90th percentile lead level is 0.006 which is above the PQL of 0.005, so Flint would not meet this criteria either.

Am I missing something?

Subject: RE: Flint Corrosion Control?

Hi Miguel - Flint is currently not practicing corrosion control treatment at the WTP. When they started treating water at their WTP last spring, we placed them on full chart (100 sites) Pb/Cu monitoring for two consecutive 6 month periods. WQ monitoring is also being conducted. The first round of samples after switch-over from DWSD (July 1, 2014 – Dec 31, 2014) had 90th percentiles of 6 ppb for Lead and 110 ppb for Copper. The second round of samples (Jan 1, 2015 – June 30, 2015) is underway with approximately 20 of the 100 sample site results in. The highest lead result out of the 20 received thus far is 13 ppb.

Based on the matrix of recommended corrosion control study components for Large PWS's for both Lead and Copper, there are no additional requirements for the City of Flint based on the levels of lead and copper in the current source water and the results of the lead and copper distribution monitoring. The only provision of the Lead & Copper Rule which classifies the existing treatment of large PWSs as optimized for corrosion control is when the difference between the 90% Pb-TAP and Pb-POE is less than the lead practical quantitative level (PQL) for each six-month period of the initial monitoring program. By definition, the PQL for lead is 0.005 mg/L; and the lead value for the source water used in this determination is the highest source water lead concentration. If this condition is met, then no study or testing is required. We believe this condition has been met for Flint. However, we will re-evaluate this after the 2nd round of 6 month sampling is completed.

If you have any further questions, please contact the Lansing District Supervisor, Steve Busch at (517) 643-2314 or at buschs@michigan.gov.

Have a good (and hopefully warm) weekend!

Subject: RE: Proposed EPA comment on Michigan/Flint press conference announcing steps to address lead levels in Flint drinking water

Miguel,

I think there is a lot of confusion over the optimization status of Detroit and Flint. There is the apparent SDWIS error listing Detroit as a (b)(3) and I think some of the rationale being put forward by Michigan operate from a (b)(3) basis including the (b)(3)(v) timeline issue for the year of monitoring. Until we know how Flint was characterized, it is difficult to craft a response. There is a convoluted way that Flint could have been deemed (b)(3) based on the rule change that was proposed in 1996 and finalized in the 2000 Minor Revisions. We added 141.81(b)(3)(i) that stated that those systems whose highest source water lead level is below the Method Detection Limit may also be deemed to have optimized corrosion control under this paragraph if the 90th percentile tap water lead level is less than **or equal** to the Practical Quantitation Level (5 ug/L) for lead for two consecutive 6-month monitoring periods. The two 6-month rounds from 1997 are both equal to the PQL of 5 ug/L. The subsequent annual round in 1998 with a 90th percentile of 7 ug/L should have negated the (b)(3) designation if one had been applied based on the anticipated rule change or retroactively applying the rule change from the 2000 Minor Revisions to the 1997 data. There is also the possibility that the State only focused on the 90th percentiles and did not focus on the applicable monitoring periods (6-month vs. annual).

I think answers to the following questions would provide a lot of clarify to respond to Flint and the State of Michigan:

1. Was Flint ever characterized as a (b)(3) system based on the 1997 data? If yes, did the State fail to remove this designation when Flint could no longer meet the criterion when the 90th percentile rose and the difference was above 5 ug/L in the 1998 data. To re-qualify Flint would have needed two consecutive six-month monitoring periods, which was not done as all monitoring was on annual or triennial basis.

MDT:

Flint was never a (b)(3) system based on their own compliance data. I did take into account that the LCRMR added (b)(3)(i) which would allow them to be at 5 ug/L instead of 4 ug/L, but the final LCRMR was published in January 2000, so by the time Flint could use the provision (after 2000), Flint's 90th percentile was already at 7ppb (1998), making it a moot point to mention it, but I guess for the sake of completeness I should. It might save us all another week of debate.

Regarding whether Flint was ever designated or considered a (b)(3) by the State…there are no OCCT milestones reported to SDWIS for Flint (see attached). I don't know why that is, but all other large systems were reported as "system deemed optimized without OCCT" and with a reason code of "(b)(3)". In an email exchange with Pat Cook (DEQ) earlier this year, he also said Flint was a (b)(3), but their numbers made no sense. I will forward that email exchange to you. I think getting into all of this will muddy the waters and folks are already having a tough time understanding, so it may suffice to just say Flint never met the (b)(3) criteria, so that we can reduce the complexity of the discussions.

2. If Flint was never a (b)(3) or fell out of being (b)(3) based on the 1998 and/or 2000 data, did the State specify optimal water quality parameters for Flint? Did the OWQPs include a requirement for orthophosphate?

MDT:

The State never set OWQPs for any of the consecutive systems in the Detroit interconnection. The only system with OWQPs designated is Detroit. This is one of the biggest issues I brought up. If you have no OWQPs designated, there is no compliance measure. A system can turn off the treatment (i.e., disconnect from Detroit) and remain in compliance, because there is no minimum orthophosphate level set. This is why it's important to reinforce that OWQPs must be set for all large systems (consecutives included) unless they meet the (b)(3) criteria.

3. If there were State specified OWQPs for Flint, did the State change them when they approved the source and treatment change? If not, how did Flint comply with the orthophosphate requirements with no orthophosphate?

MDT: See response to 2. Above

4. Did the State mistakenly characterize Flint as a (b)(3) based on the two consecutive rounds of annual monitoring in 2001 and 2002 where Flint met the 90th percentile part of the (b)(3) criteria, but did not have the correct monitoring periods? Flint met the 90th percentile part of the (b)(3) criteria in all rounds until the 2014 data – post-switch.

MDT: No clue on this one. Pat Cook outlines the criteria (two six-month rounds) which Flint clearly doesn't meet, but also says they believe they meet it. There's lots of conflicting info we are getting from DEQ, so I think the easiest thing to do as I mentioned above is to just state plainly and simply that they never met the (b)(3) criteria.

I think responses to these questions would greatly help in crafting a response.

Let me know if you have questions.

Thanks

Jeff

Subject: Re: Proposed EPA comment on Michigan/Flint press conference announcing steps to address lead levels in Flint drinking water

Honestly, I think the HQ folks are not understanding the rule provisions...

Can someone please tell me what data is being used to justify applying the 141.81(b)(3) criteria to Flint?

Even if we disregard the consecutive system agreement that is in place and look only at Detroit's or only at Flint's compliance data, since the source water lead is zero, the 90th lead percentile values for Detroit or Flint must be at/below 4 ug/L. It is clear from their compliance data (see below) that neither of them have ever met the (b)(3) criteria highlighted below. 141.81(b)(3)(iii) ONLY applies if you have met the (b)(3) or (b)(3)(i) criteria. Consequently, I don't see why they are even talking about (b)(3).

(3) Any water system is deemed to have optimized corrosion control if it submits results of tap water monitoring conducted in accordance with § 141.86 and source water monitoring conducted in accordance with § 141.88 that demonstrates for two consecutive 6-month monitoring periods that the difference between the 90th percentile tap water lead level computed under §141.80(c)(3), and the highest source water lead concentration is less than the Practical Quantitation Level for lead specified in § 141.89(a)(1)(ii).

(i) Those systems whose highest source water lead level is below the Method Detection Limit may also be deemed to have optimized corrosion control under this paragraph if the 90th percentile tap water lead level is less than or equal to the Practical Quantitation Level for lead for two consecutive 6-month monitoring periods.

The only time that Detroit conducted two consecutive six-month rounds of monitoring was in 1992 and 1997. They did not meet the (b)(3) criteria in either round. The rest of the monitoring is annual or triennial monitoring.

The only time that Flint conducted two six-month rounds of monitoring was in 1992 and 1997. They did not meet the (b)(3) criteria in either round. The rest of the monitoring is annual or triennial monitoring.

Therefore, unless folks are saying that the data from the entire interconnection of systems (Detroit + Flint + all others) is treated as a single system under 141.29 and collectively meets the (b)(3) criteria, I don't see how (b)(3) is even relevant in this discussion.

1. **What about the interim report that has been attributed to a "rogue" EPA employee?** The interim report was prepared by a Region 5 employee as part of his regular duties at EPA. It was intended to be an internal document to brief EPA managers on lead levels in drinking water at three residential properties in Flint. The interim report notes that a "final report will be submitted once additional analyses have been completed on pipe and water samples." **Has a final report been prepared?** Yes. **Can I get a copy of the report?** The report contains Personally Identifiable Information and other confidential health data. If a FOIA request is submitted for the document, EPA attorneys will determine the extent to which a redacted document can be released. **Why was the interim report released without redaction?** EPA did not release the interim report to the public.

2. **What about the SDWA petition that was submitted to EPA on 10/1/2015?** EPA will review the petition.

3. **Are all large drinking water systems required to implement corrosion control?** Attorney Client / Ex. 5

for the three of you to reach out to his lab director George Krisztian. George's phone number is 517-204-0381. Director Wyant's Executive Assistant is also available to help with logistics – her name is Mary Beth Thelen and her contact info is THELENM2@michigan.gov / 517-284-6712.

MDEQ is seeking EPA technical assistance to weigh the relative merits of optimizing corrosion control for Flint River water versus returning to Detroit water during the next nine months – until Flint is able to be supplied with Lake Huron water through the new Karegnondi Water Authority pipeline. Director Wyant is not necessarily looking for a final answer by 10 am tomorrow, but he would at least like to clarify the specific questions that would need to be answered to make a decision.

Are you able to make that happen?

Thanks,

Susan

Susan,

I have been tied up with meetings all day and just saw the full email trail. Darren can cover the meeting, but the other request about source water is complex and ultimately a state and local decision. I would prefer we discuss first.

Thanks Stan. If at all possible -- I'd like everyone to get on a brief call at 8 pm eastern:

Nonresponsive Conference Code

I think the real question they are asking is whether we can help figure out if it would be easier/faster to optimize corrosion control if Flint switches back to Detroit water. That's partially a source water question and partially a treatment question.

Am I right in thinking that this sounds like it will be best addressed as a straight up technical question: putting costs aside, which water source will be easiest to optimize for restoration of the corrosion coating on pipes?

My understanding from earlier discussions is that the variability of Flint River water poses technical challenges in getting the mix right for corrosion control, whereas Detroit water already has that worked out, but that understanding needs to be tested by folks who know what they are talking about. This isn't making the decision for the city, it's offering assistance in clearly identifying pros and cons of choices.

Public health emergency declared due to lead in Flint water

By The Associated Press | Posted Oct 1st, 2015 @ 1:01pm

FLINT, Mich. (AP) — Genesee County commissioners have declared a public health emergency for residents using water from the Flint River through the city's water system.

Tests have shown children with elevated levels of lead, months after Flint began drawing and treating water from the river. The water is aggravating lead in old pipes in thousands of homes.

Commissioners issued an advisory Thursday recommending that people not drink the water unless tests show lead levels are down or the water has gone through an approved filter.

The General Motors Foundation, the local United Way and others have given at least $105,000 to buy filters.

Gov. Rick Snyder has pledged to announce some type of action by the end of the week. He says the consequences of using the river weren't "fully understood."

Legislators take action to fix Flint water supply

By Kathleen Gray, Detroit Free Press Lansing Bureau 2:31 p.m. EDT October 1, 2015

LANSING The Michigan Legislature is beginning to take notice of the ongoing controversy surrounding Flint’s water system, which has been plagued since the city disconnected from the Detroit water system and began pulling its water supply from the Flint River.

The state Senate approved a supplemental appropriations bill that included a $100 placeholder while the state looks for a solution to the water issue.

“We want to make sure we have an accurate number. We didn’t want to put too much in or not enough,” said state Sen. Jim Ananich, D-Flint. “We want to get an accurate understanding of what it’s going to cost to get us the help that we need.”

The appropriation comes on the heels of Gov. Rick Snyder telling reporters on Wednesday that he’ll have some more answers on the state’s role in fixing Flint’s water problems by the end of the week.

An anonymous benefactor and the state have begun distributing water filters to Flint residents in recent weeks after a Hurley Medical Center researcher found lead levels increasing in Flint.

“We’ve been actively working that issue for a significant period of time and providing additional resources recently,” Snyder said. “I would expect us to have more to talk about that by the end of of the week and how we’re partnering with Flint and the federal government on this.”

In 2014, city officials ended the city's contract with the Detroit Water and Sewerage Department, saying that water costs were too high. They opted instead to pull from the Karegnondi Water Authority, which is building a system to supply Genesee County with water pulled from Lake Huron. In the long run, this will mean lower water costs, officials have said, adding that water from the Detroit system will cost $1.5 million more a month than the city is paying now.

But until the new system comes online in 2016, Flint is temporarily pulling water from the Flint River. Since it made the switch, residents have complained that the water smells, is discolored and makes them sick.

And the Hurley researcher recently found that the number of Flint children with elevated blood-lead levels — 5 micrograms per deciliter or more — jumped from 2.1% in the 20 months prior to Sept. 15, 2013, to 4.0% between Jan. 1 and Sept. 15 this year. In certain ZIP codes, the change was even more troubling, she said — jumping from 2.5% of the children tested to 6.3%.

Ananich said filters need to be made available to affected residents, especially vulnerable citizens like children and senior citizens, and the corrosion in the water system pipes needs to be addressed.

“And I think we need to move to a new water source, potentially going back to Detroit,” he said. “Filters can do a lot of good, corrosion control can do some good. But a new water source has to happen and it has to happen soon.”

In addition to the money for Flint water issue, the appropriations bill approved by the Senate also included a $7.7-million settlement of a lawsuit filed by a Flint woman whose car was hit by a Michigan State Police trooper, who was pursuing a driver who refused to stop for a seat belt violation.

The woman and her daughter were injured in the July 3, 2014, crash and another passenger Jacqueline Nichols, 64, of Flint, was killed. Trooper Timothy Fagin received undisclosed discipline after the crash and remains a state trooper.

Flint data on lead water lines stored on 45,000 index cards

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 01, 2015 at 12:18 PM

FLINT, MI -- The city knows which homes in Flint have pipes most likely to leach lead into tap water, but can't easily access the information because it's kept on about 45,000 index cards.

Department of Public Works Director Howard Croft said his office is trying to convert data from the cards, including whether homes have lead service lines, to an electronic spreadsheet program so that homes with the highest risk of lead in water can be easily identified.

The effort could be critical to the distribution of 5,250 lead-clearing water filters being funded by the United Way, General Motors and others.

A United Way news release today, Oct. 1, says filters will be distributed "to the highest-risk populations first to ensure the safety of the community."

Testing by Virginia Tech university and a study by the director of Hurley Medical Center's pediatric residency program have warned of a serious problem with lead in Flint's drinking water.

Croft said Wednesday, Sept. 30, that he "can't put a number on" how long it will take the city to convert its paper records into electronic data or maps that can be used to pinpoint lead hotspots. "It's on our to-do list."

Work on computerizing information on the index cards has started, but about 75 percent of the work remains, the DPW director told the City Council Wednesday.

Although the city's water is lead-free when it leaves Flint's water treatment plant, lead service lines that feed about half of homes and businesses in the city have the potential to leach lead as the water flows through the pipes.

Experiments by Virginia Tech university show Flint's treated water -- drawn from the Flint River -- is about 19 times more corrosive than Lake Huron water that had been purchased from the city of Detroit for decades, making the problem much worse than in the past.

Flint changed its drinking water source from Lake Huron to Flint River in April 2014, a decision that came as the city was being run by a state-appointed emergency manager.

Although Flint Mayor Dayne Walling has said the city will complete plans for making the river water less corrosive by the end of the year, there is no treatment for corrosion -- such as the addition of phosphates -- currently.

Gov. Rick Snyder said this week that the state is preparing to announce its plans for assisting the city with the lead in water problem.

After months of assurances by the DEQ that Flint water met all requirements of the Safe Drinking Water Act, Snyder said Wednesday, Sept. 30, that "it appears that lead levels could be higher or could be increased.".

While the governor said the decision to run Flint River water through the city's aging water distribution system, including lead service lines to homes, was made "with the community," Walling has said he had no involvement in the decision and privately questioned it.

Croft has said about half of Flint's homes have lead service lines and quickly identifying where they are located could be critical for water filter distribution or any program that involves the removal and replacement of lead pipes.

Walling asked Snyder in a Sept. 14 letter for $10 million for what he called a "healthy homes initiative" aimed at replacing lead service lines in "the most vulnerable households."

Croft said he's been in contact with the University of Michigan-Flint and Kettering University, asking if students might be available to help city employees with the task of computerizing data about lead pipes from the index cards.

City Councilwoman Vicki VanBuren said she was surprised that the city's information on lead service lines isn't an a format that's already easily accessible.

"I had asked if we could get a map," VanBuren said. "When I requested that information ... (Croft) responded, 'OK, no problem.' So I was surprised when there was nothing to see.

"That seems like basic information they should already be working with," she said.

More than 5,000 in Flint to get lead water filters following donation

By Dominic Adams | dadams5@mlive.com The Flint Journal Follow on Twitter on October 01, 2015 at 11:35 AM, updated October 01, 2015 at 12:04 PM

FLINT, MI – More than 5,000 Flint residents will be able to get water filters following an influx of $105,000 from private and public sources.

The filters come as the city and county have issued lead advisories related to the city's drinking water.

A recent study by a Hurley Medical Center doctor says infants and children are being found with elevated levels of lead in their blood since the city switched to using the Flint River as its water source.

The General Motors Foundation donated $50,000, the United Way of Genesee County pitched in $25,000 and another $10,000 came from the Making Our Children Smile Foundation.

Another $20,000 from community development block grant funds was secured by the city, according to the United Way.

The United Way will work with the Genesee County Health Department to purchase the filters, which cost about $20 each. The health department is working with community partners to prioritize need and distribute filters to the highest risk populations first to ensure the safety of the community. Water filters are NSF certified to include removal of lead.

"Upon first learning of the water quality issue in the city of Flint the United Way partnered with Hurley Children's Hospital, Mott Children's Health Center, the Food Bank of Eastern Michigan and the Flint Diaper Bank to provide bottled water to families in the community," Jamie Gaskin, CEO of the United Way of Genesee County said in a statement. "Now is the time to provide a more economical and long-term solution to help residents until the water issue is resolved."

Information on distribution of the filters will be communicated through the Health Department website, as well as a hotline that is in the process of being established, the statement said.

The Flint School District also has stopped using the city as a water source and is seeking bottled water donations.

"This is a great example of community members, leaders and partners banding together to ensure people have access to clean drinking water," Flint Mayor Dayne Walling said in a statment.

The Community Foundation of Greater Flint also is working to get filters for the initiative.

"Giving back to our communities is more than investing in our facilities; it involves helping to improve the quality of life for those who live in our plant cities," Cathy Clegg, GM North American Manufacturing and Labor Relations vice president said in a statement. "The United Way is a long-time GM partner and is well positioned in the Flint area to help the residents most in need."

Cindy Estrada, UAW vice president and director of the union's GM Department, worked with Clegg to secure the $50,000 grant from the GM Foundation. The UAW was also involved in initial efforts to get bottled water into the community, the statement said.

"The UAW has a proud history of helping workers and their families, but we also take great pride in assisting people in our communities," Estrada said. "Together with the United Way of Genesee County, GM and the GM Foundation, we hope residents are able to access clean water for their families."

GM donates $50K for water filters for Flint residents

Posted: Oct 01, 2015 10:22 AM CDT Updated: Oct 01, 2015 10:22 AM CDT

By Brianna Owczarzak, Managing Web Editor

FLINT, MI (WNEM) -General Motors is stepping up to help Flint residents with the water crisis.

The GM Foundation is donating $50,000 to purchase water filters for Flint residents. The donation went to the United Way of Genesee County.

The filters will remove contaminants from the water, allowing residents to use the water for drinking and cooking.

“Giving back to our communities is more than investing in our facilities; it involves helping to improve the quality of life for those who live in our plant cities,” said Cathy Clegg, GM North American Manufacturing and Labor Relations vice president. “The United Way is a long-time GM partner and is well positioned in the Flint area to help the residents most in need.”

Overall, the United Way of Genesee County and the city of Flint raised more than $100,000 for water filters.

Along with the $50,000 from GM, the United Way gave $25,000 from its general fund, the Making our Children Smile Foundation donated $10,000, and $20,000 came from Community Development Block Grant funds.

The water filters cost about $20 each, according to the United Way.

The highest risk populations will get the water filters first.

“This is a great example of community members, leaders and partners banding together to ensure people have access to clean drinking water,” Flint Mayor Dayne Walling said.

Flint resident: Water looks like urine, smells like sewer

Jim Lynch and Chad Livengood, The Detroit News 8:50 a.m. EDT October 1, 2015

Flint — The questionable quality of the city's drinking water made headlines again this week, but not much of it has been news to Ashley Holt.

For almost a year, the water from her faucet has looked "like urine," smelled "like the sewer" and, if you're brave enough to sip it, hasn't tasted "normal," the 25-year-old Flint resident said. It's why she's limited for months how often her children — ages 5, 6 and 12 — come in contact with it.

But following last week's revelation that Flint children are showing higher amounts of lead in their blood, the situation has escalated for her cash-strapped family.

In a city where 41.5 percent of the population is below the poverty line, a lack of money is the reason Holt was walking instead of driving downtown this week to pick up her children from school. She scrambles to find enough to buy them bottled water.

"The only option I've got is just to not drink the water and stick with pop and juice," Holt said. "(I) go to the store and get a gallon of water a day, if I can afford it at the time."

The hardships experienced by residents here are having public health and political ripple effects that are being felt from city hall to the governor's office. Gov. Rick Snyder said Tuesday he could unveil "more action steps" as early as the end of this week.

Researchers from Virginia Tech and Hurley Children's Hospital in Flint said last week

that lead levels in local children have risen since the city, under Snyder's appointed emergency manager, started getting its water from the Flint River instead of the Detroit Water & Sewerage System. Studies showed that in some areas lead levels doubled and, in two local zip codes, the levels tripled.

Lead poisoning can cause learning disabilities, according to the Centers for Disease Control and Prevent. At very high levels, it also can lead to seizures, coma and even death.

Water quality has become the central issue in the mayoral election that is a month away. It also has put Snyder's administration — particularly the Michigan Department of Environmental Quality — under the microscope. There are questions about how the DEQ tests water quality, as well as the governor's back-channel efforts this summer to send 1,500 water filters to Flint families when state officials insisted the water was fine.

Sommer Adams said there are doctor's visits in the future for her three kids because she fears they may have been exposed to lead.

"Even though I don't see it in my water or haven't experienced no type of (problems) with drinking it, you never know," said Adams, 23.

Governor questioned

The idea of switching water systems seemed to make sense. Municipal officials didn't like the rates residents were forced to pay and wanted to be part of a new supply system being built to draw from Lake Huron, just like Detroit's system.

Tapping the river for a year or two was supposed to provide water until the Karegondi Water Authority was up and running. Almost immediately after the switch in April 2014, there were complaints about the treated river water's appearance, smell and taste.

A year later, the state-appointed successor emergency manager, Jerry Ambrose, rejected the city council's attempts to tie back to the Detroit system as "incomprehensible."

"(Lake Huron) water from Detroit is no safer than water from Flint," Ambrose said at the time.

The Snyder administration's confirmation Tuesday that it helped an anonymous donor send 1,500 water filters to Flint families seemed to undercut the decision. At an unrelated Wednesday press conference, the Capitol press corps grilled the governor about Flint's woes.

"It appears that lead levels could be higher or have increased... ," Snyder said. "We're looking at making sure they're within safe limits, according to the federal government."

Mayor election a focus

The water problems have ratcheted up interest in the Nov. 3 mayoral election, which figured to draw more scrutiny anyway since Flint emerged from state control in late April.

Business owner and candidate Karen Weaver has attacked incumbent Mayor Dayne Walling for failing to take back total control of the government from the city administrator left in place by the state's emergency manager. After the reporting of the lead results, Weaver has claimed that Walling knew about the problem as far back as June, thanks to a U.S. Environmental Protection Agency report that flagged the situation.

"You didn't speak up," she said Wednesday. "Yes, the emergency manager had power to make the final decision, but nobody takes your voice."

Walling countered that the first time he heard of the elevated lead levels was Sept. 21, a few days before the results were made public.

“I’m asking everyone to carefully consider my record because it has been a complicated four years with four different emergency managers that each involved myself and city council in different ways at different times,” Walling said.

This month, Walling wrote to Snyder requesting the state help with $30 million in new infrastructure improvement aid.

Public Information Officer Jason Lorenz said the city hasn’t received a response.

Old pipes complicate testing

Shervon Goss, 32, paints a disturbing picture of what she experiences in her townhouse complex in Flint’s south end. Her tap water has an odor, Goss said, and showers result in dry skin and rashes.

“It’s a complex with a whole lot of people and a whole lot of babies there,” she said. “These are people who probably can’t afford to go and buy bottled water. So they get forced into drinking the (tap) water that’s unhealthy.”

Like many residents, Goss wonders how this happened.

State officials admitted it is difficult to do consistent lead testing on water being pumped through old lead plumbing and service connection lines. Water tested at intake or upon release from the treatment plant can be exposed to lead when it reaches old lead connections on private property, the officials said.

“The testing protocol that we have tends to offer a systemwide assessment of how water interacts with that line and home plumbing,” said Brad Wurfel, DEQ’s spokesman. “There’s a lot we unfortunately don’t know about those (home lead) levels.”

Some local groups have stepped up to provide free water to residents. The House of Prayer Missionary Baptist Church gave away bottled water Wednesday, drawing a line of cars.

On Thursday, the Food Bank of Eastern Michigan will ship packages of diapers combined with gallon jugs of water to area social service organizations.

Local activists are prepared to hold protests and urge residents to stop paying their water bills if state and city officials don’t make the switch back to water from Detroit, said Rev. Alfred Harris, pastor of Saints Church in Flint.

“We’re praying that the governor will say we’ve got to go back to Detroit water,” Harris said.

All--Below are my draft notes from our call last week, June 10, 2015. Thank you all for participating. I apologize for the delay in getting these out in draft to you all for review--I was hoping to get a couple of items ironed out that were fuzzy during our discussions, but hasn't happened yet. Several ACTION items below. So, please review to make sure I documented our discussion/agreements correctly, and feel free to edit as needed. I you could get back to me by July 13, that would be great. Thank you!

Jennifer

Attendees:
MDEQ: Liane Shekter-Smith, Richard Benzie, Carrie Monosmith, Kris Philip, Dan Dettweiler,

Marjorie Rodriguez (Student), Kevin Holdwick, Mike Prysby, Dana DeBruyn, Steve Busch
EPA Region 5: Tom Poy, Rita Bair, Nick Damato, Janet Kuefler, Michele Palmer, Tom Murphy, Heather Shoven, Cary McElhinney, Andrea Porter, Miguel Deltoral, Mostafa Noureldin

Summary:

1.Changes in Lead Disinvestments and Commitments for FY 2016 ARDP--for discussion: Due to our extreme focus on lead in drinking water, this is the consensus here.

a. Consumer notification of tap results at NTNCWSs:
(Suggested wording) The NCWS program commits to full implementation of the lead consumer notification of tap results requirement, to begin in CY 2016. Region 5 will assist in a notification outreach effort in late FY 2015 to remaining 698 NTNCWSs that are not schools/daycares, to begin providing lead consumer notice in CY 2016. NCWS program commits to include information on providing lead consumer notice in the annual monitoring letter sent to all NTNCWSs for CY 2016.

STATE: The State found this change in the wording acceptable.

b. Collection of Lead samples at NTNCWSs during June - September 2016 timeframe
(Suggested wording) NCWS program commits to including information in the applicable NTNCWS annual monitoring letters of the requirement to collect their annual/triennial lead sample between June and September only, during CY 2016. The MDEQ NCWS program currently does not have the capability to easily track lead sampling compliance within this specific timeframe.

STATE: The State found this change in the wording acceptable.

c. Follow-up Actions for NTNCWSs that sample outside of June-September 2015 timeframe
(From 5/5/15 call notes w/EPA) MDEQ commits to providing Region 5 with all CY 2015 lead (and copper?) sample data for all NTNCWSs by March 2016 so that EPA can analyze how many PWSs monitored outside the June through October timeframe. EPA commits to follow-up with MDEQ to discuss follow-up actions.

STATE: The State agreed to providing EPA R5 the raw lead and copper data for all CY 2015 for all NTNCWSs. The WaterTrack database does have data, but it can't generate violations. MDEQ doesn't commit to enforcing against 2016 violators in FY 2016. The State said, it is planning on disinvesting in enforcing against these violators due to limited capability of WaterTrack; however, if the State's noncommunity data management capabilities improve during FY 2016, implementation of this disinvestment may become a reality. The State has not designated an alternate timeframe, or done system specific documentation as to why the system qualifies for a different timeframe.

d. Submittal of the lead and copper reporting form
(Suggested wording) MDEQ commits to requiring CWSs and NTNCWSs to submit the lead and copper reporting form via the annual monitoring letters to each system, tracking CWSs and NTNCWSs submittal of the lead and copper reporting form, and commits to issuing violations for failure to submit the lead and copper reporting form. The reporting form provides the address of the sample site, designates sampling site selection criteria, and

explanation(s) for any changes in sampling sites.

STATE: Dan Dettweiler stated that the NCWS program was not in a position to do this for the NTNCWSs at this time. Tom Murphy asked how does WaterTrack handle/track high lead results? Tom M said there is a truncation issue on the sample location name field. Dan acknowledged that this problem has been identified, and the Department of Technology Management and Budget (DTMB) has been trying to fix this problem, but it is a challenging problem. Dan stated that sample sites for NTNCWSs are actually identified by LHDs during the sanitary survey and are documented in the sanitary survey. The LHDs check the pdf of the laboratory results that clearly states where the sample was taken, and calculates the 90th percentile. However, Dan stated that the requirement to send in the lead and copper reporting form is not currently in the LHD annual monitoring letter sent to each system. The NTNCWSs do not couple this form to the Lead Consumer Notice, as does the CWSs. Kris Philip pointed out that the LHDs select the sample sites, thus when they are calculating the 90th percentile, they are actually double checking the sites with the results.

From our discussion, the Region concluded that at this time, the LHDs are actively reviewing the lead and copper results and the sample locations when they calculate the 90th percentiles to ensure proper LCR monitoring is conducted by ALL NTNCWSs at the proper sample sites. After our call, I asked for verification of this statement, and Dan Dettweiler responded, "Just as with an exceeding value of an MCL, WaterTrack alerts the LHD when at least one sample for a water system exceeds the AL. A 90th percentile calculation is made only when an exceeding result alerts the LHD. For cases where there are no exceeding results, private lab samples are reviewed at the time LHDs hand-enter them into WaterTrack. State lab samples, which flow electronically via nightly downloads from the state lab database, are reviewed when pdfs of the analysis reports are, routinely, emailed by the state lab to LHDs. Beyond that, MDEQ's annual evaluation of the LHDs provides another opportunity for us to oversee the proper assigning and use of designated sampling locations."

ACTION: The Region will discuss Dan's response internally, and get back to the State with any issues/concerns.

Kris Philip said that the CWS program is requiring that the systems submit the form, but they are not enforcing whether or not the system submits the form. Often, the CWS will submit the Lead Consumer Notice and the Lead and Copper reporting form together. Kris said if 90%+ are already submitting the forms, then the State will agree to follow-up and enforce this requirement. But, if less than that, will probably be too much of a burden. Kris said they may change the way DEQ is tracking in SDWIS during FY 2016. But, the Region said SDWIS-Prime probably won't be available until 2017 at the earliest.

ACTION: Kris Philip will research with the District Offices to determine the current submittal rate of the lead and copper reporting form from CWSs; and report back to the Region.

Nonresponsive

Nonresponsive

3. Status of Flint
   a. TTHM levels for May--Due to MDEQ district engineer June 10-RECEIVED; see link to results https://www.cityofflint.com/2015/06/01/may-water-testing-results-show-all-locations-are-within-acceptable-limits-for-tthm/
   All samples below the TTHM MCL; one site still has an LRAA above the MCL but decreased from 105 ppb in Feb to 93.5 ppb in May.

   Mike Prysby said he is getting ready to issue the construction permit to the City of Flint to install a GAC filter in July, that will remove more TOC to further reduce the potential of developing TTHMs. Mike said he has already issued a construction permit for a transmission line within the City that will help reduce water age.

   b. Lead in Flint

Our discussions with MDEQ indicate that no phosphates/corrosion control has been added to the system since April 2014 when the source of drinking water changed to the Flint River. We understand that the City is just finishing up its second set of 6-month initial monitoring for lead; where the results will probably warrant a Corrosion Control Study to be conducted. Since Flint has lead service lines, we understand some citizen-requested lead sampling is exceeding the Action Level, and the source of drinking water will be changing again in 2016, so to start a Corrosion Control Study now doesn't make sense. The idea to ask Flint to simply add phosphate may be premature; there are many other issues and factors that must be taken into account which would require a comprehensive look at the water quality and the system before any treatment recommendations can/should be made. Miguel is recommending MDEQ and EPA? approach Flint about formally requesting EPA's Office of Research and Development in Cincinnati support on the lead in Flint drinking water issue, and request that Mike Schock, ORD, and possibly Darren Lytle, ORD, to participate in Flint's drinking water advisory committee so that a comprehensive evaluation on how to proceed can be discussed.

Miguel provided a brief summary of the high lead results found at the residence of Ms. Leeanne Walters in Flint. Miguel will follow up with a written summary of the work conducted, sample results, and conclusions.
Miguel believes that lead levels in Flint are being affected by the lack of Corrosion Control being conducted by the City, since the LCR requires 2 6-month initial monitoring for a new source. Steve Busch stated that in the Lead sampling pool, almost all of the lead sample sites are lead service lines, and the State is not seeing large increases in lead levels at the tap. Miguel suggested that EPA experts in Lead, Mike Schock; and in distribution systems, Darren Lytle, be added to the Flint drinking water advisory committee to assist the City/State in determining the best way to proceed to minimize lead in the City's drinking water during the interim use of the Flint River, and subsequent use of Lake Huron water.

Miguel said he will send Mike Schock and Darren Lytle's contact information to Steve and Mike. Steve pointed out that the City is following the LCR requirements, and completing the requirements in a timely manner. Miguel's point is that since the LCR was promulgated 20+ years ago, that research and different situations, like Washington D.C., have educated scientists, experts, and regulators that the existing requirements in the LCR may not be as protective as previously thought. Thus, he can only make recommendations as to how to revise sampling protocols. And Miguel acknowledges that it may be another year before these regulation changes are promulgated in the Long-Term Lead and Copper Rule. In December 2015, the NDWAC recommendation is expected.

The Region asked the State if the Flint River will be a permanent supplemental source of drinking water, once the City of Flint connects with the Karegdodi pipeline from Lake Huron. Mike Prysby said that the City is currently pumping 22MGD, but the City has 40-50 MG of storage. The City is currently working on reducing its unaccounted for water losses, and these water losses are dropping. The State, through the Governor's office, provided disadvantaged system funding, $2M which includes $900K for lead detection, and pipe inspection.

4. Update on WaterTrack to SDWIS-State: The migration of WaterTrack data to SDWIS-State was number 39 on the Dept of Technology Management and Budget's (DTMB) project list last year; this year it is
number 30. It doesn't appear this project has a high priority. Does the State have any new information on the progress of this project?

Dan said that the migration of WaterTrack data to SDWIS-State has moved to a priority of 26 with DTMB so far this year. But Dan said they are going to take this project out of the que, since Ronda Page has returned to the drinking water program from DTMB. Ronda said she re-estimated DTMB's involvement in this project to be far less than originally thought, so there is no need for any program developers or the tech team. This project will only need the Data Team and the web designers only. Ronda said they can set-up on a new server and migrate the data from WaterTrack to SDWIS-State themselves; in-house. Kris Philip remembers migrating the CWS data to SDWIS-State, so she can be a resource for this project. The parts that are needed to be completed by DTMB could be contracted out. Cary McElhinney said that there is a process of withholding PWSS grant funds and re-directing the funds to a HQ contract with SAIC. Richard Benzie said the process worked well last year when MI used PWSS funds to contract with a HQ contractor to conduct NEEDS survey training.

ACTION: Jen will follow up with State and Tribal Programs Branch about the process and timing of holding back funds from the PWSS grant for the purpose of contracting with SAIC.

5. Consequences of cutting the State drinking water program to a "minimal program"
Jennifer had a discussion with Richard Benzie regarding the possibility of the Michigan State Legislature looking to have just a minimal drinking water program, meaning only a program with activities that are required by the Federal SDWA. Jennifer ultimately discussed this internally with Tom Poy. The minimal program suggested would cut out Operator Certification, Capacity Development, Plan Review, Cross Connection Control, Source Water Protection, among other programs that are State required. Operator Certification and Capacity Development, while not required by the Federal regulations, do have financial strings attached. And Plan review/construction permits are required by the SRF program for a loan. Any recent communication with the State Legislature that they might proceed and make this possibility a reality?

   Richard and Liane said there is no current threat from the State Legislature to cut the State-funded PWSS program activities. But there is a State-wide impetus to delete old programs and regulations, so this could lead to questioning the purpose of State-funded PWSS program activities. Richard is just being proactive in preparing a justification. Richard remembers a discussion many years ago about what constitutes a "comprehensive drinking water program". Tom Poy and Jennifer commented in a previous communication with Richard that the EPA PWSS primacy program and the State-funded activities in the drinking water program were meant to complement each other. To support this statement, Jennifer sent Richard some PWSS Priority guidance from the 90's, some preamble language from the 1976 SDWA found by our attorney, and language from Section 142 of the SDWA regulations from 1976 that might assist him in his justification.

6. EPA's Resource Message at the LHD Workshop in April
From the 2014 analysis of Shared Goals 2013 data, which is compliance data, for noncommunity systems, there are increasing trends of nitrate M/R violations for both NTNCWSs and TNCWSs. We discussed this on the last semi-annual call. Analysis of the 2015 Shared Goals 2014 data (April 2015) shows an improvement--that of decreasing numbers of bacti/nitrate M/R violations.

   However, in light of the upcoming implementation of RTCR in 2016, the question raised here in the Region is:

> Does the State have a plan with the LHDs as to what activities must be prioritized, and what will fall off the plate? Not all LHDs will need to disinvest based upon each LHD's resources, but some poorly funded LHDs may have to disinvest in some activities/drop activities that have no risk to public health.
>
> Carrie Monosmith said that she met with the RTCR workgroup, comprised of LHD Directors/sanitarians, last fall to identify activities that the state can disinvest in during the next several years as the LHDs begin implementation of RTCR. They could not identify any activity that could be dropped. The main thing that will help the LHDs save time is to get the electronic DWR (eDWR) going, or the CMD portal, which will drastically reduce the LHDs time in inputting laboratory data into WaterTrack/SDWIS-State. From there, they can develop electronic data forms (CROMEER compliant) that the systems can submit.

Thank you!

Subject: Flint's Water Crisis -- Michigan's Environment Report

October 6, 2015

This Week on The Environment Report

Water samples from Flint (L) and Detroit (R). Photo, Steve Carmody / Michigan

In Flint, lead levels in some children's blood have spiked dramatically since the city started using the Flint River as its water source. We've been hearing some conflicting things from state officials about what exactly Flint has been doing--if anything--to cut down on lead in the water. We'll sort that out, on the next *Environment Report*.

Subject: Inquiry from the Washington Examiner re Flint

I got a call from Kyle Feldscher of the Washington Examiner regarding Flint drinking water. In his message he says that a lot of people are calling for EPA to get involved and he asks what it would take for that to happen. Here's the statement we issued on Friday:

Actions that the State of Michigan and the City of Flint announced today are important steps to protect public health. The immediate steps being taken to implement corrosion control will reduce lead in drinking water, as required by the Safe Drinking Water Act. U.S. EPA will continue to provide technical assistance to the State of Michigan and the City of Flint to support their joint effort.

Would you like to add any more detail about how we're involved, or just update to this:

3. Status of Flint
    a. TTHM levels for May--Due to MDEQ district engineer June 10-RECEIVED; see link to results https://www.cityofflint.com/2015/06/01/may-water-testing-results-show-all-locations-are-within-acceptable-limits-for-tthm/
    All samples below the TTHM MCL; one site still has an LRAA above the MCL but decreased from 105 ppb in Feb to 93.5 ppb in May.

Mike Prysby said he is getting ready to issue the construction permit to the City of Flint to install a GAC filter in July, that will remove more TOC to further reduce the potential of developing TTHMs. Mike said he has already issued a construction permit for a transmission line within the City that will help reduce water age.

b. Lead in Flint

Our discussions with MDEQ indicate that no phosphates/corrosion control has been added to the system since April 2014 when the source of drinking water changed to the Flint River. We understand that the City is just finishing up its second set of 6-month initial monitoring for lead; where the results will probably warrant a Corrosion Control Study to be conducted. Since Flint has lead service lines, we understand some citizen-requested lead sampling is exceeding the Action Level, and the source of drinking water will be changing again in 2016, so to start a Corrosion Control Study now doesn't make sense. The idea to ask Flint to simply add phosphate may be premature; there are many other issues and factors that must be taken into account which would require a comprehensive look at the water quality and the system before any treatment recommendations can/should be made. Miguel is recommending MDEQ and EPA? approach Flint about formally requesting EPA's Office of Research and Development in Cincinnati support on the lead in Flint drinking water issue, and request that Mike Schock, ORD, and possibly Darren Lytle, ORD, to participate in Flint's drinking water advisory committee so that a comprehensive evaluation on how to proceed can be discussed.

Miguel provided a brief summary of the high lead results found at the residence Citizen name / Ex. 6 Citizen name / Ex. 6 in Flint. Miguel will follow up with a written summary of the work conducted, sample results, and conclusions.
Miguel believes that lead levels in Flint are being affected by the lack of Corrosion Control being conducted by the City, since the LCR requires 2 6-month initial monitoring for a new source. Steve Busch stated that in the Lead sampling pool, almost all of the lead sample sites are lead service lines, and the State is not seeing large increases in lead levels at the tap. Miguel suggested that EPA experts in Lead, Mike Schock; and in distribution systems, Darren Lytle, be added to the Flint drinking water advisory committee to assist the City/State in determining the best way to proceed to minimize lead in the City's drinking water during the interim use of the Flint River, and subsequent use of Lake Huron water.

Miguel said he will send Mike Schock and Darren Lytle's contact information to Steve and Mike. Steve pointed out that the City is following the LCR requirements, and completing the requirements in a timely manner. Miguel's point is that since the LCR was promulgated 20+ years ago, that research and different situations, like Washington D.C., have educated scientists, experts, and regulators that the existing requirements in the LCR may not be as protective as previously thought. Thus, he can only make recommendations as to how to revise sampling protocols. And Miguel acknowledges that it may be another year before these regulation changes are promulgated in the Long-Term Lead and Copper Rule. In December 2015, the NDWAC recommendation is expected.

The Region asked the State if the Flint River will be a permanent supplemental source of drinking water, once the City of Flint connects with the Karegdodi pipeline from Lake Huron. Mike Prysby said that the City is currently pumping 22MGD, but the City has 40-50 MG of storage. The City is currently working on reducing its unaccounted for water losses, and these water losses are dropping. The State, through the Governor's office, provided disadvantaged system funding, $2M which includes $900K for lead detection, and pipe inspection.

26 CONNECT 79 TWEET 1 LINKEDIN 15 COMMENT

FLINT, Mich. — Outside a taco shop on Fifth Street, Estella Walker balances a gallon jug of water on top of the stroller that holds her 3-month-old son, DeWayne.

She's mixing bottles of formula for DeWayne and his 19-month-old sister Vanessa.

Nadene Strickland sits outside her home on the city's north side, watching her grandsons play basketball. She still drinks the water. She can't afford bottled.

Shopping at the local farmers market with five of her seven children, Tena Fransioli says she hasn't used tap water in a long time.

Across town, LeeAnne Walters' kids are having bath night. She heats bottled water in the microwave and carries it to the bathroom, slowly filling the tub.

USA TODAY

Yards pose health risk to kids, moms near factory site

In Melissa Mays' bathroom, a reminder is taped to the wall: To brush your teeth, use the bottled water on the bathroom counter.

This is life in Michigan's seventh largest city, where you really should not drink the water.

“I was hysterical. I cried when they gave me my first lead report.”

LeeAnne Walters, Flint, Mich.

For more than a year, Flint residents have been screaming that their water wasn't OK, that it smelled bad, tasted bad, looked bad and was making them sick.

Few listened. The state told them, again and again, that the water was safe — that contamination had been handled and that the water was within acceptable levels.

Not until the end of September did Michigan Gov. Rick Snyder finally acknowledge the profound problems with Flint's water. Lead, from aging pipes, is leaching into the water the city pumps from the Flint River, exacerbated by a local treatment plant's failure to add appropriate chemicals.

For decades, the City of Flint bought its water from the Detroit Water and Sewerage Department, water that arrived treated to make it safe for human consumption. In 2013, the city opted to join the Karegnondi Water Authority along with Genesee, Lapeer and Sanilac counties, and in 2014 to pump water from the Flint River while the new system is under construction.

Joining the Karegnondi Water Authority didn't mandate the end of Flint's relationship with Detroit's water system. Genesee County, for example, has continued to purchase its water from Detroit, albeit at a premium, county drain commissioner Jeff Wright said.

USA TODAY

N.C. residents worry over coal ash ponds

In Flint, both decisions were made during the appointments of four different emergency managers, turnaround guys the governor brought in to fix Flint's budget woes, and with the approval of the Michigan Department of Environmental Quality, which monitors water quality and treatment.

For most of the past year, the state has told residents that the water here was fine, that it met the standards of the Safe Drinking Water Act. The state, for the most part, still says that's true.

Jessica Owens of Flint, Mich., holds a bottle of drinking water Oct. 2, 2015, that came from her home two weeks previous that she said had been proven to contain lead. (Photo: Ryan Garza, Detroit Free Press)

But now the governor's team acknowledges that its data are incomplete and that high lead levels found in the water for this city of 99,000 — and an increasing number of Flint kids with elevated blood-lead levels — merit action. Snyder is dedicating $1 million to purchase lead filters for

Flint residents, has ordered further testing and is improving corrosion control at the Flint water treatment plant, which should help keep lead out of the water.

Flint River never was meant to be a long-term answer to the city's water needs. It was a short-term fix for a city scrambling to save money.

When Flint joined the Karegnondi Water Authority, the Detroit Water and Sewerage Department terminated its 35-year contract with the city. To continue to purchase Detroit water, Flint would have had to renegotiate a short-term contract at a higher cost.

Switching to river water saved Flint $5 million to $7 million a year.

The region had long wanted its own water system, Wright said. Because of its elevation and distance from Detroit, Flint paid a higher rate for Detroit water than most far-flung communities.

Only one pipeline stretches that far north, and that means Flint — and the other Karegnondi

Water Authority communities — are vulnerable. In 2000, the pipeline went down, leaving

250,000 people without water for four days, he said.

It had happened before, and it has happened since. The area needed a second pipeline, but Detroit wouldn't build it without a 30-year commitment from the communities the pipeline would serve.

USA TODAY

Audit faults EPA in delays probing lead factory dangers

At the rates Detroit Water is obliged to charge, the communities were reluctant to make that commitment, Wright said.

When the Karegnondi Water Authority system is complete next year, Flint will be back on Lake Huron water, same as Detroit. But unless its treatment plant is capable of properly treating the water, its problems will not end.

“There is no safe level of lead.”

Dr. Eden Wells, Michigan Department of Health and Human Services

Because much of this area's infrastructure is composed of copper pipes with lead welds, systems like Detroit's add anticorrosive agents to prevent lead from leaching into the water. River water is more difficult to treat than lake water, and its chemistry can change daily, Wright said.

Because the Flint River is shallow compared with Lake Huron its temperature is higher. All of this affects the composition of the water and the chemicals required to make it potable and safe to pass through old pipes.

When Flint started pumping river water, its local plant either never employed corrosion control or didn't use sufficient control. Remarks that Dan Wyant, Michigan Department of Environmental Quality chief, made Friday didn't make that entirely clear and Snyder's office didn't respond to an e-mail seeking clarification.

It didn't take long for residents to notice a difference. By June 2014, according to the city, residents began to complain about the water.

And as water quality suffered, Flint residents' bills have gone up, thanks to rate increases imposed first by Mayor Dayne Walling, and then built into the budget by Snyder's emergency managers. A Genesee Circuit Court judge issued an injunction in August rolling back a 35% rate increase imposed in 2011.

USA TODAY

Lead poisoning's impact: Kids suspended more at school

A Virginia Tech University researcher tested water from hundreds of Flint homes, releasing a report showing elevated lead levels in the city's children. State data showed the highest rates of lead in Flint's water in 20 years.

And a blood test analysis that a Michigan pediatric researcher released Sept. 24 and the state Department of Health and Human Services confirmed Friday, found the percentage of Flint kids with elevated blood-lead levels — 5 micrograms per deciliter or more — jumped from 2.1% in the 20 months prior to Sept. 15, 2013, to 4.0% between Jan. 1 and Sept. 15 this year. In certain ZIP codes, it doubled since the switch.

Flint residents protest the water quality in the city Oct. 5, 2015, outside City Hall in Flint, Mich. (Photo: Danny Miller, AP)

In children, exposure to lead can cause behavior or attention problems, hearing problems, kidney damage, reduced IQ and slowed body growth, among other effects. The damage is irreversible.

"There is no safe level of lead," said Dr. Eden Wells, the health department's chief medical executive.

For children like Gavin, one of LeeAnne Walters' 4-year-old twins, the potential for problems is more serious. Because Gavin's immune system is compromised — a condition unrelated to the water — he's more susceptible to the effects of lead.

The whole family developed rashes, likely because of a disinfectant added to the water to combat coliform bacteria.

Gavin stopped gaining weight, lagging his twin; now he's 37 pounds, compared with his twin's

52 pounds. Doctors weren't sure what was happening.

Then she asked the city to test her water. It showed astronomically high rates of lead, prompting an urgent e-mail exchange with the city, the state Department of Environmental Quality and the U.S. Environmental Protection Agency, according to documents obtained by the American Civil Liberties Union through the Freedom of Information Act.

Walters said she received an urgent call from city hall advising her to stop using her water.

USA TODAY

Lead poisoning toll revised to 1 in 38 young kids

Lead screening showed that Gavin's blood-lead levels had soared, up to 6.5 micrograms per deciliter of blood from 2, before the switch.

"I was hysterical," Walters said. "I cried when they gave me my first lead report." Before that, she'd pushed her kids to drink water instead of juice or soda.

"I'm trying to do my job as a mom," she said. Now, "my kids will never drink tap water again." One of the worst things about lead is that it's hard to know exactly how it will manifest.

USA TODAY

EPA fails to revise key lead-poisoning hazard standards

"What's the difference going to be between Gavin and his brother in school? Is he going to have more issues as this progresses?" Walters asked.

That's what haunts Mays, who said her family has experienced a range of health problems she links to the water. Mays and Walters have become relentless advocates for safe water, leading protests, interacting with Virginia Tech researchers and challenging city and state assurances that the water was OK.

These days, even Mays' cat drinks bottled water.

USA TODAY

Lead poisoning: What parents can do

"I pushed them to drink water: 'Put down that juice, go get some water,' " she said of her

teenage sons. "Lead is in our blood."

As Mays' children grow, she said she'll always wonder whether any problem is because of lead or would it have happened anyway.

"I'll never know," she said.

FLINT, Mich. — Outside a taco shop on Fifth Street, Estella Walker balances a gallon jug of water on top of the stroller that holds her 3-month-old son, DeWayne.

She's mixing bottles of formula for DeWayne and his 19-month-old sister Vanessa.

Nadene Strickland sits outside her home on the city's north side, watching her grandsons play basketball. She still drinks the water. She can't afford bottled.

Shopping at the local farmers market with five of her seven children, Tena Fransioli says she hasn't used tap water in a long time.

Across town, LeeAnne Walters' kids are having bath night. She heats bottled water in the microwave and carries it to the bathroom, slowly filling the tub.

USA TODAY
Yards pose health risk to kids, moms near factory site

In Melissa Mays' bathroom, a reminder is taped to the wall: To brush your teeth, use the bottled water on the bathroom counter.

This is life in Michigan's seventh largest city, where you really should not drink the water.

“I was hysterical. I cried when they gave me my first lead report.”

LeeAnne Walters, Flint, Mich.

For more than a year, Flint residents have been screaming that their water wasn't OK, that it smelled bad, tasted bad, looked bad and was making them sick.

Few listened. The state told them, again and again, that the water was safe — that contamination had been handled and that the water was within acceptable levels.

Not until the end of September did Michigan Gov. Rick Snyder finally acknowledge the profound problems with Flint's water. Lead, from aging pipes, is leaching into the water the city pumps from the Flint River, exacerbated by a local treatment plant's failure to add appropriate chemicals.

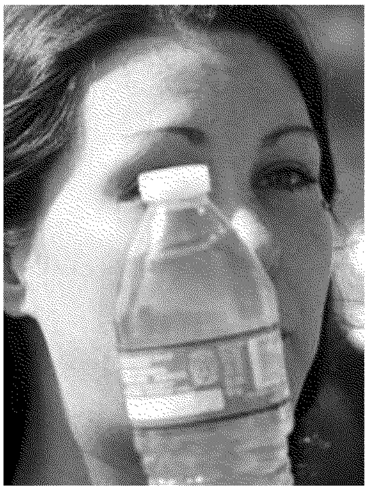
For decades, the City of Flint bought its water from the Detroit Water and Sewerage Department, water that arrived treated to make it safe for human consumption. In 2013, the city opted to join the Karegnondi Water Authority along with Genesee, Lapeer and Sanilac counties, and in 2014 to pump water from the Flint River while the new system is under construction.

Joining the Karegnondi Water Authority didn't mandate the end of Flint's relationship with Detroit's water system. Genesee County, for example, has continued to purchase its water from Detroit, albeit at a premium, county drain commissioner Jeff Wright said.

USA TODAY
N.C. residents worry over coal ash ponds

In Flint, both decisions were made during the appointments of four different emergency managers, turnaround guys the governor brought in to fix Flint's budget woes, and with the approval of the Michigan Department of Environmental Quality, which monitors water quality and treatment.

For most of the past year, the state has told residents that the water here was fine, that it met the standards of the Safe Drinking Water Act. The state, for the most part, still says that's true.



Jessica Owens of Flint, Mich., holds a bottle of drinking water Oct. 2, 2015, that came from her home two weeks previous that she said had been proven to contain lead. (Photo: Ryan Garza, Detroit Free Press)

But now the governor's team acknowledges that its data are incomplete and that high lead levels found in the water for this city of 99,000 — and an increasing number of Flint kids with elevated blood-lead levels — merit action. Snyder is dedicating $1 million to purchase lead filters for Flint residents, has ordered further testing and is improving corrosion control at the Flint water treatment plant, which should help keep lead out of the water.

Flint River never was meant to be a long-term answer to the city's water needs. It was a short-term fix for a city scrambling to save money.

When Flint joined the Karegnondi Water Authority, the Detroit Water and Sewerage Department terminated its 35-year contract with the city. To continue to purchase Detroit water, Flint would have had to renegotiate a short-term contract at a higher cost.

Switching to river water saved Flint $5 million to $7 million a year.

The region had long wanted its own water system, Wright said. Because of its elevation and distance from Detroit, Flint paid a higher rate for Detroit water than most far-flung communities.

Only one pipeline stretches that far north, and that means Flint — and the other Karegnondi Water Authority communities — are vulnerable. In 2000, the pipeline went down, leaving 250,000 people without water for four days, he said.

It had happened before, and it has happened since. The area needed a second pipeline, but Detroit wouldn't build it without a 30-year commitment from the communities the pipeline would serve.

USA TODAY
Audit faults EPA in delays probing lead factory dangers

At the rates Detroit Water is obliged to charge, the communities were reluctant to make that commitment, Wright said.

When the Karegnondi Water Authority system is complete next year, Flint will be back on Lake Huron water, same as Detroit. But unless its treatment plant is capable of properly treating the water, its problems will not end.

“There is no safe level of lead.”

Dr. Eden Wells, Michigan Department of Health and Human Services

Because much of this area's infrastructure is composed of copper pipes with lead welds, systems like Detroit's add anticorrosive agents to prevent lead from leaching into the water. River water is more difficult to treat than lake water, and its chemistry can change daily, Wright said.

Because the Flint River is shallow compared with Lake Huron its temperature is higher. All of this affects the composition of the water and the chemicals required to make it potable and safe to pass through old pipes.

When Flint started pumping river water, its local plant either never employed corrosion control or didn't use sufficient control. Remarks that Dan Wyant, Michigan Department of Environmental Quality chief, made Friday didn't make that entirely clear and Snyder's office didn't respond to an e-mail seeking clarification.

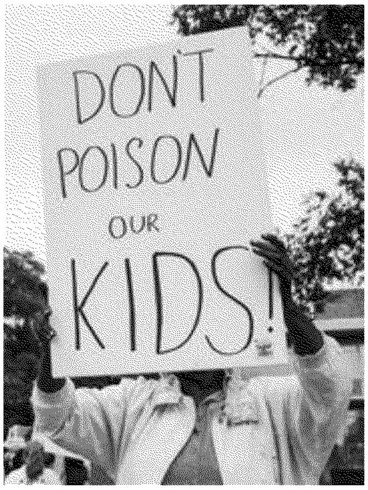
It didn't take long for residents to notice a difference. By June 2014, according to the city, residents began to complain about the water.

And as water quality suffered, Flint residents' bills have gone up, thanks to rate increases imposed first by Mayor Dayne Walling, and then built into the budget by Snyder's emergency managers. A Genesee Circuit Court judge issued an injunction in August rolling back a 35% rate increase imposed in 2011.

USA TODAY
Lead poisoning's impact: Kids suspended more at school

A Virginia Tech University researcher tested water from hundreds of Flint homes, releasing a report showing elevated lead levels in the city's children. State data showed the highest rates of lead in Flint's water in 20 years.

And a blood test analysis that a Michigan pediatric researcher released Sept. 24 and the state Department of Health and Human Services confirmed Friday, found the percentage of Flint kids with elevated blood-lead levels — 5 micrograms per deciliter or more — jumped from 2.1% in the 20 months prior to Sept. 15, 2013, to 4.0% between Jan. 1 and Sept. 15 this year. In certain ZIP codes, it doubled since the switch.



Flint residents protest the water quality in the city Oct. 5, 2015, outside City Hall in Flint, Mich. (Photo: Danny Miller, AP)

In children, exposure to lead can cause behavior or attention problems, hearing problems, kidney damage, reduced IQ and slowed body growth, among other effects. The damage is irreversible.

"There is no safe level of lead," said Dr. Eden Wells, the health department's chief medical executive.

For children like Gavin, one of LeeAnne Walters' 4-year-old twins, the potential for problems is more serious. Because Gavin's immune system is compromised — a condition unrelated to the water — he's more susceptible to the effects of lead.

The whole family developed rashes, likely because of a disinfectant added to the water to combat coliform bacteria.

Gavin stopped gaining weight, lagging his twin; now he's 37 pounds, compared with his twin's 52 pounds. Doctors weren't sure what was happening.

Then she asked the city to test her water. It showed astronomically high rates of lead, prompting an urgent e-mail exchange with the city, the state Department of Environmental Quality and the U.S. Environmental Protection Agency, according to documents obtained by the American Civil Liberties Union through the Freedom of Information Act.

Walters said she received an urgent call from city hall advising her to stop using her water.

USA TODAY

Lead poisoning toll revised to 1 in 38 young kids

Lead screening showed that Gavin's blood-lead levels had soared, up to 6.5 micrograms per deciliter of blood from 2, before the switch.

"I was hysterical," Walters said. "I cried when they gave me my first lead report."

Before that, she'd pushed her kids to drink water instead of juice or soda.

"I'm trying to do my job as a mom," she said. Now, "my kids will never drink tap water again."

One of the worst things about lead is that it's hard to know exactly how it will manifest.

USA TODAY

EPA fails to revise key lead-poisoning hazard standards

"What's the difference going to be between Gavin and his brother in school? Is he going to have more issues as this progresses?" Walters asked.

That's what haunts Mays, who said her family has experienced a range of health problems she links to the water. Mays and Walters have become relentless advocates for safe water, leading protests, interacting with Virginia Tech researchers and challenging city and state assurances that the water was OK.

These days, even Mays' cat drinks bottled water.

USA TODAY

Lead poisoning: What parents can do

"I pushed them to drink water: 'Put down that juice, go get some water,' " she said of her teenage sons. "Lead is in our blood."

As Mays' children grow, she said she'll always wonder whether any problem is because of lead or would it have happened anyway.

"I'll never know," she said.

Flint had no plan to minimize lead corrosion in people's drinking water post river switch

By REBECCA WILLIAMS & LINDSEY SMITH, Michigan Radio • OCT 6, 2015

Confused about corrosion control? We were too.

In Flint, lead levels in some children's blood have spiked dramatically. Scientists believe the Flint River is part of the problem. Flint switched from Detroit's water system and started pulling water from the Flint River last year.

We've been hearing some conflicting things from state officials about what exactly Flint has been doing — if anything — to cut down on lead in the water.

The confusion

State regulators told federal regulators earlier this year by email that Flint is not using corrosion control.

Corrosion control is important because it helps prevent lead from leaching out of old pipes into people's tap water.

But on Friday, Michigan Department of Environmental Quality Director Dan Wyant said this:

"Know that when the city switched from Detroit sewer and water, that the city utilized corrosion controls," he said.

That directly conflicts with what the state said before.

After Friday's press conference, we asked DEQ spokesman Brad Wurfel to clarify. He then said the corrosion control Flint used was lime.

"Flint was trying to address the hardness of the water, so they chose lime to address the hardness," he said. "That is also a corrosion control agent. It's a recognized corrosion control agent. It just wasn't, it wasn't cutting it."

We ran this by some outside experts.

Daniel Giammar is an expert on lead in water. He's a professor of environmental engineering at Washington University in St. Louis, Missouri.

"Simply claiming to have lime addition as corrosion control is insufficient," he says.

Giammar told us that you can use lime for corrosion control, but you have to have a plan. You want to make sure your water hits a certain pH range and alkalinity so that you minimize the amount of lead in the water.

“Whether or not you have corrosion control isn’t whether or not you’re adding lime, but it’s rather, are you achieving the target pH that you set out?” he says.

The softening process could be making the situation worse.

Marc Edwards is a civil engineering professor from Virginia Tech University and a nationally renowned expert on water treatment. He was also confused by Wyant’s claim that Flint had corrosion controls in place. So, over this past weekend, he took a closer look at Flint’s data.

He says the water softening treatment Flint is using is actually making Flint’s water more corrosive.

“Even as they’re denying the water is corrosive and it’s causing this higher lead, the pH value is plummeting, it’s becoming more acidic,” Edwards says. “And it led me to wonder, I mean, are they even watching what’s happening to the pH of their water? It’s like flying a jumbo jet without checking your gas tank.”

We requested an interview with someone from Flint's water department, but they did not provide anyone to talk to us for this story by our deadline.

The DEQ's response

The DEQ says they have been keeping an eye on the pH of Flint’s water.

Liane Shekter Smith heads up DEQ's Office of Drinking Water and Municipal Assistance.

"Absolutely, we've been monitoring the pH data. We monitored it prior to the switch to the Flint River and we monitored it since. And we've compared the pH data and there has not been a significant change."

Shekter Smith says they consider a pH of 7.5 to be acceptable. But both Marc Edwards and Daniel Giammar told us cities should shoot for a pH of 8 or above to minimize the amount of lead getting into drinking water. That's because you want the water to be less acidic to minimize corrosion.

Data available online from the City of Flint show that the pH of treated water leaving the plant has been trending downward - becoming more acidic. Monthly average pH measurements dropped from 8.07 in December 2014 to 7.34 in August 2015.

A key point here: there's a difference between having some kind of treatment process that might work and having an approved corrosion control plan.

Yesterday, Shekter Smith confirmed that Flint does not have a corrosion control plan.

"At the time they proposed switching to the Flint River and implementing the lime softening treatment method, there was an indication that the pH control provided by that method perhaps would provide optimal corrosion control," Shekter Smith says.

It's clear that method didn't work.

Tomorrow, city, state, and federal officials will get together to come up with some kind of plan to control the corrosion.

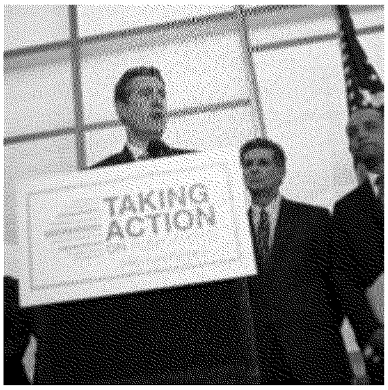
Michigan Governor Rick Snyder

dedicating $1 million to purchase lead filters for Flint residents

Submitted by Diane Hoffman on Wed, 10/07/2015 - 16:58

http://nycity.today/content/286001-michigan-governor-rick-snyder-dedicating-1-million-purchase-lead-filters-flint



It is now that Michigan Gov. Rick Snyder has agreed that there are profound problems with Flint's water. For over a year, Flint residents have been saying that their water is not ok. They have complained about its bad smell, bad taste and also told that people have become sick after having it, but the state told them that the water was safe.

Flint's water had enormous amount of lead coming from aging pipes. It has been entering into the water. The problem has aggravated due to the failure of adding appropriate chemicals by local treatment plant.

For past so many years, the City of Flint has got its water from the Detroit Water and Sewerage Department. In 2013, the city chose to join the Karegnondi Water Authority. In 2014, it chose to pump water from the Flint River.

It is now that the governor's team has acknowledged that its data is not complete and there is a need to take action. Snyder is promising $1 million to purchase lead filters for Flint residents. He has ordered further testing and working on to improve corrosion control at the Flint water treatment plant. As per experts, Flint River was never a permanent solution to the city's water requirements.

It was just a short-term fix for the city that is making efforts to save money. Switching to river led Flint to save $7 million a year rather than $5 million.

After a public health emergency was declared Tuesday due to the ongoing water crisis in Flint, Michigan, the state is now distributing free water filters and bottled water to the city's residents, according to *Reuters*.

#FlintWater quality reaches crisis level http://t.co/mIDIasyiuk pic.twitter.com/MSBLYEIfL5

— Progress Michigan (@ProgressMich) September 25, 2015

Recent tests from a local children's hospital showed that children had elevated levels of lead in their blood a year after the city began using water from a local river instead of buying Lake Huron water through Detroit in order cut costs.

The tests "found the number of Flint kids under the age of 5 years old with above average lead levels nearly doubled city-wide and in some cases, tripled," reported FOX 2's Randy Wimbley.

"Our children are a top priority given the effects lead can have on their development," Mayor Walling said in a statement. "Any bottled water donations we receive will be used for our children and other high risk groups, such as our seniors."

It appears that the toxic metal had been entering drinking water through corroded pipes and plumbing materials, according to Flintwaterinfo.com.

Or, as Henry Henderson, the director of Natural Resources Defense Council's (NRDC) Midwest office, explained in a blog post, "the water from the Flint River, as treated, is far more corrosive than the Lake Huron water that had previously coursed through the City's pipes and water infrastructure."

"As a result of the change to corrosive river water," Henderson continued, "the aging lead pipes released higher concentrations of lead into Flint's homes. Despite the urgently stated concerns raised by residents and presented to state and local officials, the people of Flint were told their water was safe."

Based on state official's action plan for #flintwater, we can't let this crisis continue. http://t.co/th35Vp6g4Q pic.twitter.com/MHtH1HyzbX

— Senator Jim Ananich (@jimananich) October 2, 2015

Lead, which is most harmful to pregnant women, women who are nursing and children under age 6, can damage the brain and kidneys, and can interfere with the production of red blood cells. Lead poisoning can also irreversibly stunt a child's mental and physical development.

The U.S. Environmental Protection Agency says that 15 parts per billion (ppb) is the maximum recommended level of lead in household water. However, an alarming Flint Water Study found that about 10 percent of their local water samples had values of lead at levels of 25 ppb.

Local parent Lee-Anne Walters told *The Guardian* she was "shocked, angry … and hysterical" after learning in March that her son's immune system was compromised after unsafe lead exposure.

“I just couldn’t believe that we were paying to poison our kids,” she said.

To make matters worse, as *The Guardian* pointed out, Flint residents “pay some of the highest water rates in the U.S., in the community known for its economic decline.”

Officials had been insisting the water in Flint was safe and within federal guidelines. But they finally shifted positions this week after a public health emergency was declared by Genesee County Sheriff Robert Pickell.

Reuters reported that on Friday Michigan Gov. Snyder announced a plan that calls for “increased water testing, additional precautions for families with lead plumbing and long-term solutions to address the city’s water infrastructure challenges.”

The plan does not include restoring Detroit as a water source.

FLINT, MI -- Flint's water crisis is garnering national attention after the issue was featured in a segment on the CBS Evening News.

"It's not safe to drink the water in Flint, Michigan," anchor Scott Pelley said Tuesday, Oct. 6, as he introduced the roughly two-minute long report.

RELATED: How the Flint water crisis emerged

The segment included interviews with residents affected by poor water conditions in the city and with Mayor Dayne Walling.

"I am angry that Flint's been put in this situation," Walling told reporter Dean Reynolds.

The report highlighted Flint's switch from treated Detroit water to treating its own water from the Flint River.

Controversy surrounding the change began not long after the switch when residents started to complain of foul-smelling, dirty water. The situation escalated when the city was found in violation of the Safe Drinking Water Act when high levels of trihalomethanes -- or TTHM -- a group of four chemicals that are formed as a byproduct of disinfecting water. Over many years, the chemicals could cause liver, kidney or central nervous system problems and an increased risk of cancer.

The controversy grew once a researcher from Virginia Tech discovered elevated levels of lead in the city's water. Researchers pointed to the corrosive nature of treated Flint River water as the cause, saying the water caused lead to leach from pipes and solder into the water supply. Lead concerns were expounded when a Hurley Medical Center researcher discovered elevated lead levels in Flint children since the water switch.

Poisoning People, the Future and the Public Interest in Flint, Michigan

Posted: 10/06/2015 6:38 pm EDT Updated: 10/06/2015 6:59 pm EDT

http://www.huffingtonpost.com/henry-henderson/poisoning-people-the-futu_b_8254390.html

SWITCHBOARD .nrdc.org Lead is a devastating toxin. It ravages the brain. Robs children of IQ points and brain function. And deprives our society of vast potential. It has cast a huge, destructive shadow across human civilization.

That's why Americans eliminated it from paint. From gasoline. And have struggled mightily to ban it from toys. The continuing negative impact of lead remains in soil, homes and infrastructure exposed to lead in the past, before we were able to ban it from products.

And in Flint, Michigan, its concentration in the drinking water is shockingly high.

Pipes and taps in Flint have brought water replete with toxic lead into homes for some time since the cash-strapped city shifted water sources from Detroit's treated supply drawn from Lake Huron, and began to pull water out of the Flint River.

All water isn't the same everywhere. The water from the Flint River, as treated, is far more corrosive than the Lake Huron water that had previously coursed through the City's pipes and water infrastructure. As a result of the change to corrosive river water, the aging lead pipes released higher concentrations of lead into Flint's homes. Despite the urgently stated concerns raised by residents and presented to state and local officials, the people of Flint were told their water was safe. This amazing situation has gone on repeatedly over the past year and a half. During which more and more lead-contaminated water has gone into homes, drinking glasses, baby formula, and cooking water.

Put simply and starkly: the water being delivered to the people of Flint is not safe.

Independent tests have demonstrated the city's water to be unfit for consumption. This is particularly the case with children, whose brains and bodies are developing, making them especially vulnerable to the poisonous impact of lead.

And yet, Flint's water pipes, treatment works and supply have not been fixed or effectively addressed. Instead of immediately switching the source back to Lake Huron water through Detroit, the city and state are taking baby steps--seemingly to buy time for a new water supply pipeline that will be completed next summer.

We don't think this is right. You probably don't either.

Because the situation is wrong and unacceptable, NRDC joined with local groups and the Michigan ACLU to demand emergency federal action under the Safe Drinking Water Act. If the City and State are not going to get the poison out of Flint's water, the federal government has authority to do so under emergency powers. Our group filed a petition with the U.S. Environmental Protection Agency last week to demand quick action.

We don't think anyone should be forced to drink dangerous water. Particularly, citizens of our great democracy should not have contaminated water delivered to their homes through the public water utility. Flint, Michigan is an American city; it was a manufacturing marvel that helped define the American Century with the production of cars and a strong, vibrant middle class; and, it happens to be a city in the center of the largest resource of fresh water in North America, the Great Lakes. Our fellow citizens deserve much, much better. There is strong moral responsibility to act and act quickly. The people of Flint should not drink lead-laced water for another day, let alone another year.

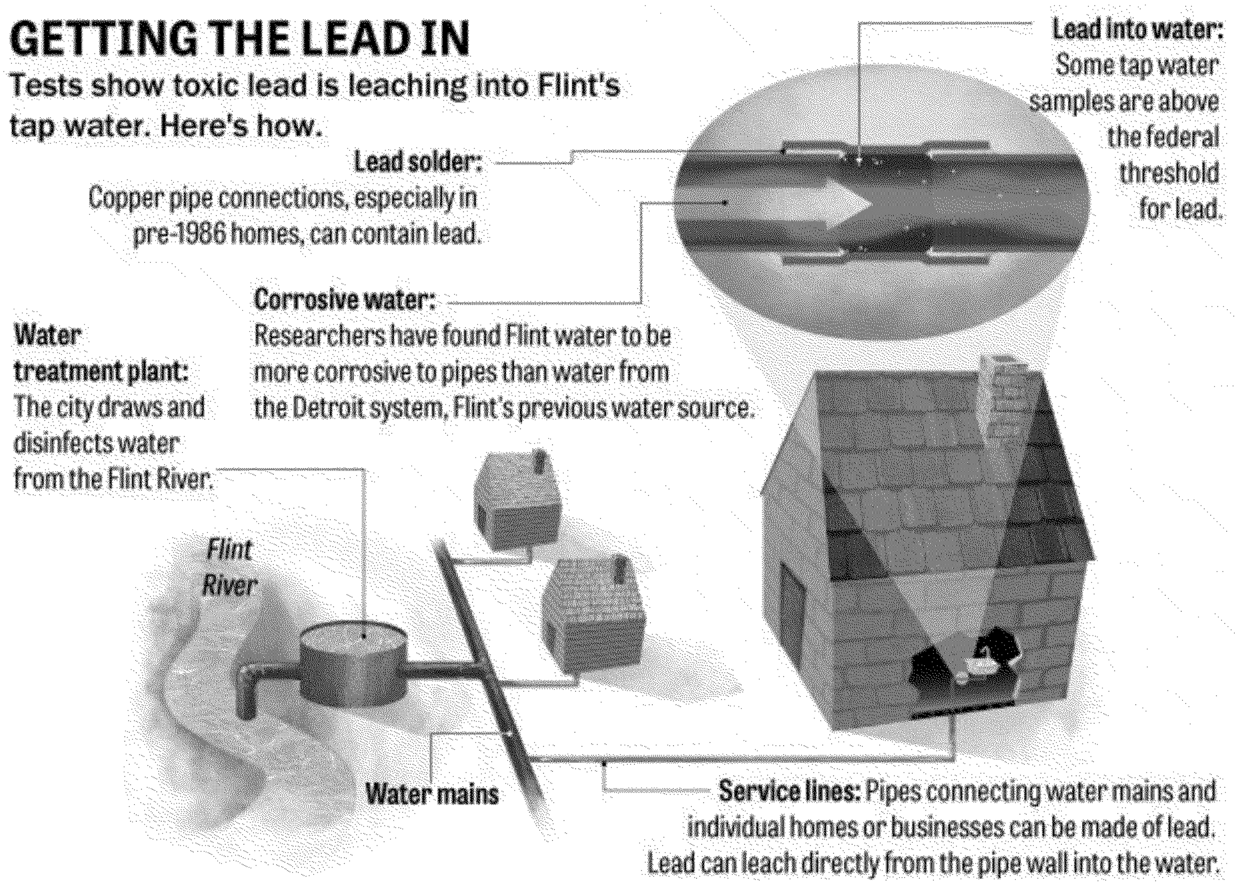
Watch live: Experts meet amid Flint drinking water crisis

http://www.mlive.com/news/flint/index.ssf/2015/10/watch_live_advisory_committee.html



GETTING THE LEAD IN
Tests show toxic lead is leaching into Flint's tap water. Here's how.
Lead solder: Copper pipe connections, especially in pre-1986 homes, can contain lead.
Lead into water: Some tap water samples are above the federal threshold for lead.
Corrosive water: Researchers have found Flint water to be more corrosive to pipes than water from the Detroit system, Flint's previous water source.
Water treatment plant: The city draws and disinfects water from the Flint River.
Flint River
Water mains
Service lines: Pipes connecting water mains and individual homes or businesses can be made of lead. Lead can leach directly from the pipe wall into the water.

FLINT, MI -- A blue ribbon panel of water experts that has been dormant for months is meeting this afternoon to discuss Flint's drinking water problems.

The committee is meeting on the third floor of Flint City Hall.

Mayor Dayne Walling said the committee will "discuss short, intermediate and long-term (plans) including filters, corrosion control, the (Detroit Water and Sewerage Department) option, lead service lines and the" Karegnondi Water Authority pipeline that officials expect to serve Flint at some point next year.

On a possible reconnection to Detroit, Walling said: "That option continues to be actively under discussion."

A livestream of the meeting is being made available by Sen. Jim Ananich, D-Flint, and Senate Democrats and can be viewed below.

Erin Brockovich highlights the Flint water fight

Posted By Lee DeVito on Wed, Oct 7, 2015 at 12:07 PM

http://www.metrotimes.com/Blogs/archives/2015/10/07/erin-brockovich-highlights-the-flint-water-fight

•□□□□□□□□ Photo credit: Eva Rinaldi from Sydney Australia,via Wikimedia Commons

•□□□□□□□□ Erin Brockovich

Environmental activist Erin Brockovich took to Facebook on Tuesday to slam Michigan authorities regarding Flint's drinking water controversy — and offered a shoutout to *Metro Times* and contributor Curt Guyette for covering the issue.

Brockovich posted a photo of Brad Wurfel, the Communications Director at Michigan Department of Environmental Quality, captioning the image with a lengthy tirade calling Wurfel a "spin doctor" and "paid distorter of truth" for his role in downplaying a July EPA memo and ongoing investigation that revealed the presence of lead in Flint's drinking water supply.

Brockovich then cited *Metro Times* contributor Curt Guyette's recent reporting on the issue, highlighting three times Wurfel had attempted to discredit or deny the ongoing investigations.

On Thursday, the Genesee County Health Department finally admitted there was a problem with Flint's water, declaring a public health emergency and urging citizens not to drink water that has not been tested or filtered.

As Guyette reported, further study of Flint's water quality was launched by a group of citizens working in conjunction with researchers at Virginia Tech and the ACLU of Michigan, who continued to study the issue despite Wurfel's denial. "If [they] had been willing to swallow that claim, children in Flint would still be getting lead poisoned," he wrote.

Read Guyette's story here or read it in this week's print edition of *Metro Times*. Read Brockovich's full post below:

Guyette: Federal Oversight Needed to Assure Water Safety in Flint

October 6th, 2015, 10:48 PM

http://www.deadlinedetroit.com/articles/13364/guyette_federal_oversight_needed_to_assure_water_safety_in_fl

THE WEAK HANDS OF THE POOR CAN GIVE NO MORE!!!
They Got $ Rich We Got

Residents of Flint protest outside City Hall in April (ACLU photo)

Curt Guyette, who has been reporting away for months on the Flint water problem, writes in Metro Times that federal oversight is needed to safeguard Flint's drinking water.

Guyette, an investigative reporter for the ACLU of Michigan, writes:

In the past few weeks, the problem of lead in Flint's drinking water has quickly gone from being a story largely ignored by the mainstream media to a scandal that's making headlines nationally.

Faced with overwhelming evidence, state and local officials who adamantly insisted for months that there was no problem have been forced to admit that their unequivocal assurances were completely false.

For that reason, the U.S. EPA needs to quickly respond to last week's formal petition calling upon the agency to step in and take a greater role in assuring that Flint's water is safe. Also needed is an investigation by an outside entity with subpoena powers to determine if laws were broken and, if so, who broke them.

One thing is certain: The MDEQ (Michigan Department of Environmental Quality) has failed miserably in its obligation to ensure that the public health is being protected. Just the opposite: The agency's consistent denials that a danger existed only served to create a false sense of security, keeping people from taking the actions needed to help limit their exposure to a potent neurotoxin that can cause irreversible damage — especially to children.

Lead levels in Mich. city have moms avoiding tap water

USA Today Network Nancy Kaffer, Detroit Free Press 9:02 p.m. EDT October 6, 2015

FLINT, Mich. — Outside a taco shop on Fifth Street, Estella Walker balances a gallon jug of water on top of the stroller that holds her 3-month-old son, DeWayne.

She's mixing bottles of formula for DeWayne and his 19-month-old sister Vanessa.

Nadene Strickland sits outside her home on the city's north side, watching her grandsons play basketball. She still drinks the water. She can't afford bottled.

Shopping at the local farmers market with five of her seven children, Tena Fransioli says she hasn't used tap water in a long time.

Across town, LeeAnne Walters' kids are having bath night. She heats bottled water in the microwave and carries it to the bathroom, slowly filling the tub.

USA TODAY

Yards pose health risk to kids, moms near factory site

In Melissa Mays' bathroom, a reminder is taped to the wall: To brush your teeth, use the bottled water on the bathroom counter.

This is life in Michigan's seventh largest city, where you really should not drink the water.

“I was hysterical. I cried when they gave me my first lead report.”

LeeAnne Walters, Flint, Mich.

For more than a year, Flint residents have been screaming that their water wasn't OK, that it smelled bad, tasted bad, looked bad and was making them sick.

Few listened. The state told them, again and again, that the water was safe — that contamination had been handled and that the water was within acceptable levels.

Not until the end of September did Michigan Gov. Rick Snyder finally acknowledge the profound problems with Flint's water. Lead, from aging pipes, is leaching into the water the city pumps from the Flint River, exacerbated by a local treatment plant's failure to add appropriate chemicals.

For decades, the City of Flint bought its water from the Detroit Water and Sewerage Department, water that arrived treated to make it safe for human consumption. In 2013, the city opted to join the Karegnondi Water Authority along with Genesee, Lapeer and Sanilac counties, and in 2014 to pump water from the Flint River while the new system is under construction.

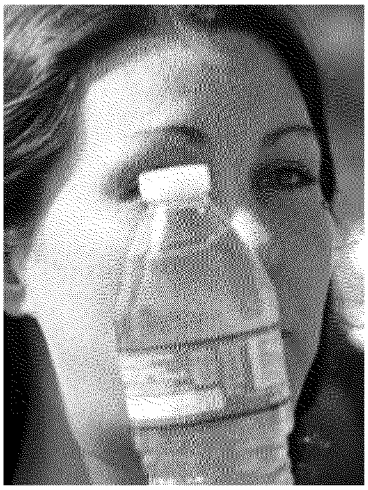
Joining the Karegnondi Water Authority didn't mandate the end of Flint's relationship with Detroit's water system. Genesee County, for example, has continued to purchase its water from Detroit, albeit at a premium, county drain commissioner Jeff Wright said.

USA TODAY

N.C. residents worry over coal ash ponds

In Flint, both decisions were made during the appointments of four different emergency managers, turnaround guys the governor brought in to fix Flint's budget woes, and with the approval of the Michigan Department of Environmental Quality, which monitors water quality and treatment.

For most of the past year, the state has told residents that the water here was fine, that it met the standards of the Safe Drinking Water Act. The state, for the most part, still says that's true.



Jessica Owens of Flint, Mich., holds a bottle of drinking water Oct. 2, 2015, that came from her home two weeks previous that she said had been proven to contain lead. (Photo: Ryan Garza, Detroit Free Press)

But now the governor's team acknowledges that its data are incomplete and that high lead levels found in the water for this city of 99,000 — and an increasing number of Flint kids with elevated blood-lead levels — merit action. Snyder is dedicating $1 million to purchase lead filters for Flint residents, has ordered further testing and is improving corrosion control at the Flint water treatment plant, which should help keep lead out of the water.

Flint River never was meant to be a long-term answer to the city's water needs. It was a short-term fix for a city scrambling to save money.

When Flint joined the Karegnondi Water Authority, the Detroit Water and Sewerage Department terminated its 35-year contract with the city. To continue to purchase Detroit water, Flint would have had to renegotiate a short-term contract at a higher cost.

Switching to river water saved Flint $5 million to $7 million a year.

The region had long wanted its own water system, Wright said. Because of its elevation and distance from Detroit, Flint paid a higher rate for Detroit water than most far-flung communities.

Only one pipeline stretches that far north, and that means Flint — and the other Karegnondi Water Authority communities — are vulnerable. In 2000, the pipeline went down, leaving 250,000 people without water for four days, he said.

It had happened before, and it has happened since. The area needed a second pipeline, but Detroit wouldn't build it without a 30-year commitment from the communities the pipeline would serve.

USA TODAY

Audit faults EPA in delays probing lead factory dangers

At the rates Detroit Water is obliged to charge, the communities were reluctant to make that commitment, Wright said.

When the Karegnondi Water Authority system is complete next year, Flint will be back on Lake Huron water, same as Detroit. But unless its treatment plant is capable of properly treating the water, its problems will not end.

“There is no safe level of lead.”

Dr. Eden Wells, Michigan Department of Health and Human Services

Because much of this area's infrastructure is composed of copper pipes with lead welds, systems like Detroit's add anticorrosive agents to prevent lead from leaching into the water. River water is more difficult to treat than lake water, and its chemistry can change daily, Wright said.

Because the Flint River is shallow compared with Lake Huron its temperature is higher. All of this affects the composition of the water and the chemicals required to make it potable and safe to pass through old pipes.

When Flint started pumping river water, its local plant either never employed corrosion control or didn't use sufficient control. Remarks that Dan Wyant, Michigan Department of Environmental Quality chief, made Friday didn't make that entirely clear and Snyder's office didn't respond to an e-mail seeking clarification.

It didn't take long for residents to notice a difference. By June 2014, according to the city, residents began to complain about the water.

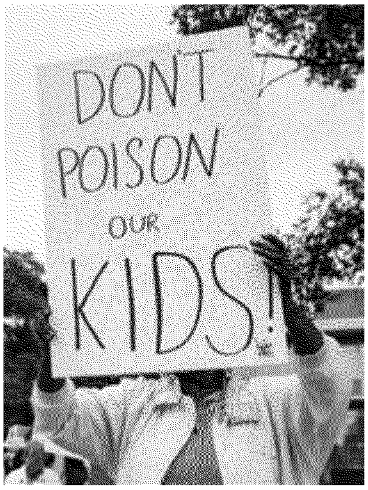
And as water quality suffered, Flint residents' bills have gone up, thanks to rate increases imposed first by Mayor Dayne Walling, and then built into the budget by Snyder's emergency managers. A Genesee Circuit Court judge issued an injunction in August rolling back a 35% rate increase imposed in 2011.

USA TODAY

Lead poisoning's impact: Kids suspended more at school

A Virginia Tech University researcher tested water from hundreds of Flint homes, releasing a report showing elevated lead levels in the city's children. State data showed the highest rates of lead in Flint's water in 20 years.

And a blood test analysis that a Michigan pediatric researcher released Sept. 24 and the state Department of Health and Human Services confirmed Friday, found the percentage of Flint kids with elevated blood-lead levels — 5 micrograms per deciliter or more — jumped from 2.1% in the 20 months prior to Sept. 15, 2013, to 4.0% between Jan. 1 and Sept. 15 this year. In certain ZIP codes, it doubled since the switch.



Flint residents protest the water quality in the city Oct. 5, 2015, outside City Hall in Flint, Mich. (Photo: Danny Miller, AP)

In children, exposure to lead can cause behavior or attention problems, hearing problems, kidney damage, reduced IQ and slowed body growth, among other effects. The damage is irreversible.

"There is no safe level of lead," said Dr. Eden Wells, the health department's chief medical executive.

For children like Gavin, one of LeeAnne Walters' 4-year-old twins, the potential for problems is more serious. Because Gavin's immune system is compromised — a condition unrelated to the water — he's more susceptible to the effects of lead.

The whole family developed rashes, likely because of a disinfectant added to the water to combat coliform bacteria.

Gavin stopped gaining weight, lagging his twin; now he's 37 pounds, compared with his twin's 52 pounds. Doctors weren't sure what was happening.

Then she asked the city to test her water. It showed astronomically high rates of lead, prompting an urgent e-mail exchange with the city, the state Department of Environmental Quality and the U.S. Environmental Protection Agency, according to documents obtained by the American Civil Liberties Union through the Freedom of Information Act.

Walters said she received an urgent call from city hall advising her to stop using her water.

USA TODAY

Lead poisoning toll revised to 1 in 38 young kids

Lead screening showed that Gavin's blood-lead levels had soared, up to 6.5 micrograms per deciliter of blood from 2, before the switch.

"I was hysterical," Walters said. "I cried when they gave me my first lead report."

Before that, she'd pushed her kids to drink water instead of juice or soda.

"I'm trying to do my job as a mom," she said. Now, "my kids will never drink tap water again."

One of the worst things about lead is that it's hard to know exactly how it will manifest.

USA TODAY

EPA fails to revise key lead-poisoning hazard standards

"What's the difference going to be between Gavin and his brother in school? Is he going to have more issues as this progresses?" Walters asked.

That's what haunts Mays, who said her family has experienced a range of health problems she links to the water. Mays and Walters have become relentless advocates for safe water, leading protests, interacting with Virginia Tech researchers and challenging city and state assurances that the water was OK.

These days, even Mays' cat drinks bottled water.

USA TODAY

Lead poisoning: What parents can do

"I pushed them to drink water: 'Put down that juice, go get some water,' " she said of her teenage sons. "Lead is in our blood."

As Mays' children grow, she said she'll always wonder whether any problem is because of lead or would it have happened anyway.

"I'll never know," she said.

Flint River Fest canceled amid city's drinking water problems

By Steve Carmody • 6 hours ago

ShareTwitter Facebook Google+ Email

Flint's drinking water controversy has led to the cancelation of a festival celebrating the Flint River.

The Flint River

Credit Steve Carmody / Michigan Radio

Tests link the corrosive nature of the river water to high lead levels in Flint tap water. Complaints about the quality of Flint's drinking water have been escalating since the city switched from Detroit water to the Flint River last year.

Rebecca Fedewa is with the Flint River Watershed Coalition, one of the organizers of River Fest.

She says organizers of Flint River Fest were worried Friday's event would not be the showcase for the Flint River they intended.

"It is a great recreational resource. It's a huge asset for the city, and that's what we wanted to show people," says Fedewa. "With the drinking water situation, we felt it could just cast a cloud over what we were trying to do."

Organizers hope to reschedule Flint River Fest for the Spring.

Flint police block some media, public from water advisory meeting

Print Email

By Ron Fonger | rfonger1@mlive.com

The scene outside a meeting of Flint's Technical Advisory Committee today, Oct. 7.Ron Fonger | The Flint Journal

FLINT, MI -- City police blocked the door outside the meeting room of a committee of water experts today, Oct. 7, leaving some news reporters and the public outside.

Flint spokesman Jason Lorenz said City Administrator Natasha Henderson ordered the arrangement because the room where the committee was meeting in City Hall was too small to accommodate non-committee members.

The Technical Advisory Committee, which has about 30 members, has been dormant for months, but was singled out by state officials last month as being a key part of improving Flint's water quality moving forward.

High levels of lead in city water and in the blood of children and infants since the city changed its water source in April 2014 have triggered a public health emergency here, including the mass distribution of water filters.

Mayor Dayne Walling told The Flint Journal-MLive earlier this week when and where the committee meeting would be today and indicated it was open to the public.

But when citizens and journalists showed up before the meeting started at 2 p.m., they were turned away from the door by police.

As the meeting started, a door to the City Council meeting room was left open. Some reporters, including a Flint Journal reporter, were allowed inside only as chairs opened up -- about 25 minutes after the meeting started.

The committee is discussing issues including the potential for the city to return to purchasing Lake Huron water from the Detroit Water and Sewerage Department.

Formed in March by Walling and former emergency manager Jerry Ambrose, the advisory committee has met just twice, but it has grown to include an expert appointed to serve by the U.S. Environmental Protection Agency's Office of Research and Development.

In announcing an "action plan" for Flint water Friday, Oct. 2, state officials touted the committee's role in ensuring "the best technology, practices and science are being followed" going forward.

Here's how that toxic lead gets into Flint water

Debunking that social media rumor on Flint water filters

Water, water everywhere and not a drop that's safe to drink -- Andrew Heller

How to get your free Flint water filter

All Stories

Confirming Brita faucet filter removes lead Reporter Sarah Schuch calls a Brita customer service representative and confirms that their faucet mount filters remove lead, and are NSF certified to do so.

FLINT, MI – The question has been spreading on social media and through the neighborhoods: Are the free faucet water filters being handed out in Flint certified to remove lead?

The answer is yes. Both NSF International -- the organization that certifies consumer products for various safety standards -- and Brita confirmed that all Brita faucet mount filters, whether white or chrome, are certified to reduce lead in drinking water.

A video making the rounds on Facebook shows a man calling Brita customer service and asking if the filters remove lead. According to the video, a response from a woman identifying herself as a customer service representative named Camille says the Brita faucet filter lost its NSF certification to remove lead. The woman claimed the packaging that says the filter is NSF certified is outdated, and the filter is no longer certified.

The Facebook video, posted Tuesday evening, had been viewed more than 10,000 times as of 1 p.m. Wednesday.

The information given by "Camille" over the phone in the video is false, according to NSF, a Flint Journal phone call to Brita's customer service and a follow-up phone call to a Brita representative.

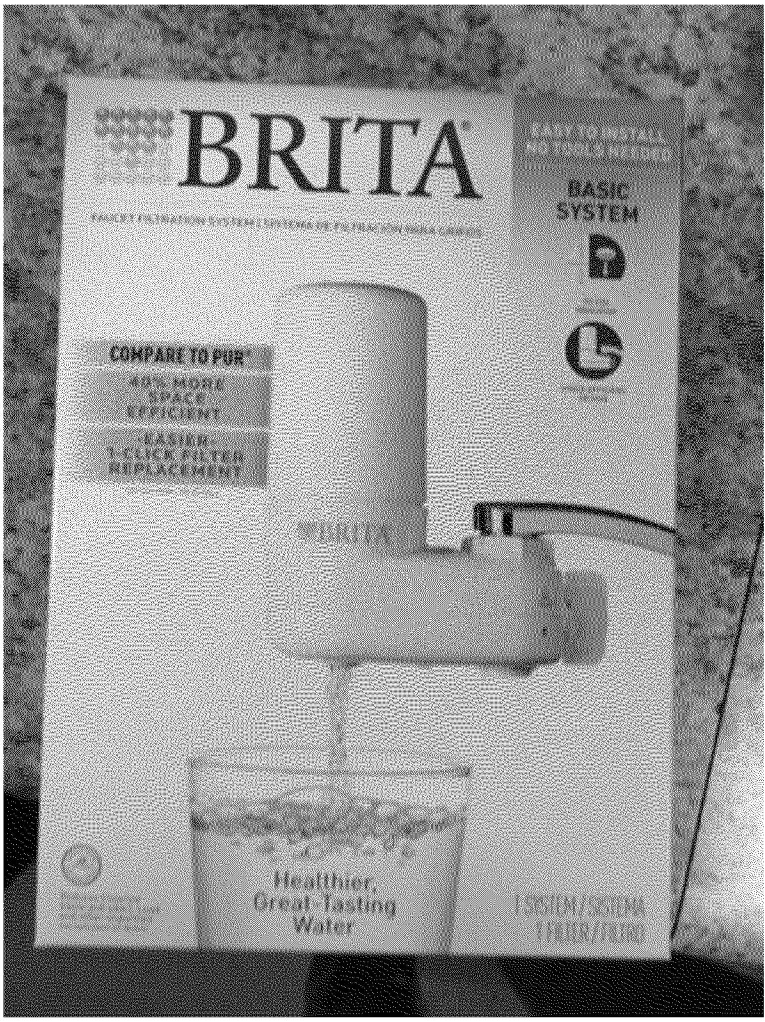
David Kargas, a spokesman for Brita, confirmed that the information heard on the video is incorrect, and there is no issue with outdated packaging. After checking into the situation, Kargas said the customer service representative pulled up the wrong Brita model number, and therefore gave incorrect information.

"We have worked with our customer service team to correct this," he said in an email.

"All Brita faucet mount filters, including the 20,000 faucet mount filters distributed this week by state and local organizations, are certified by NSF International to remove 99.3 percent of lead from tap water that has a lead concentration of 150 parts per billion – far higher than what has been reported in Flint," Kargas said.

"There is no possible issue with old or outdated packaging," he said. "Quite simply, all Brita Faucet Mount filters are certified by NSF International to reduce lead."

Related: How to get your free Flint water filter



One of the Brita faucet mount filters being given away in Flint, Michigan.MLive.com

Kargas said he was surprised to hear early Wednesday morning of the video going around social media.

"It's of paramount importance to us that we are providing the information not just in this instance but in all instances," Kargas said. "We've been working with a variety of different folks in Flint over the past few days. ... Seeing the wrong information going around is discouraging to us."

According to Brita's website, the pitcher and dispenser filters do not remove lead but the faucet filters do. The faucet filters are the ones being given out in Flint.

NSF International also confirmed that the Brita faucet filters will remove 99.3 percent of lead.

NSF International, the public health and safety organization that tests and certifies residential drinking water filtration systems, has confirmed that the three water filter systems being distributed by officials in Flint are currently certified by NSF International for lead reduction, according to a written statement.

"Specifically, Brita Faucet Filtration System, model number SAFF-100 (in white, black or chrome), the PUR Faucet Mount, model number FM-3700B, and the Zero Technologies Water Treatment Pour Through Pitcher, model number ZD-018, are certified for lead reduction in accordance with NSF/ANSI 53 – Drinking Water Treatment Unit Standard for Health Effects," the statement read.

Health advisories warning of some of the harmful effects of lead were issued by the city and county after elevated levels of lead were discovered in the drinking water of some Flint customers.

Meanwhile, the Flint School District began asking students to avoid school drinking fountains and bring bottled water to school.

The state issued an "action plan" for Flint water that includes filters and free water tests, among other items, and various community organizations have also begun donating filters and bottled water.

A call to the Brita customer service line (video above) asked about the Brita faucet filter model SAFF-100 – the brand being handed out at GCARD and other locations -- and was told it does remove lead from the water.

On the filter's box it reads NSF/ANSI Standard 53, which shows that it is certified to remove lead.

Individuals wishing to verify that a specific filter is NSF certified can do so via the NSF website. Here are the links to verify each certification: Brita Faucet Filter System SAFF-100, PUR Faucet Water Filter System and the Zero Water Technologies Water Pitcher Filtration System

Consumers can contact NSF International at info@nsf.org or 1-800-673-8010 for any additional questions.

Additionally NSF International has other resources for the consumer regarding drinking water safety:

Water, water everywhere and not a drop that's safe to drink -- Andrew Heller

How to get your free Flint water filter

All Stories

FLINT, MI -- Tests show water leaving Flint's treatment plant is lead free, but by the time it reaches the tap, it sometimes has elevated levels of lead, and here's why.

Since April 2014, the city has drawn raw water from the Flint River before treating it at its plant on Dort Highway.

Water is pumped into pipes that carry it to about 31,000 homes and businesses in the city, an estimated half of which have individual lead service lines.

Water from Lake Huron, which the city had purchased from Detroit since the 1960s, was far less corrosive than water that's being produced from the river today, according to researchers from Virginia Tech university.

The city's own testing has also shown lead levels have been rising since the city began using the Flint River as its water source. Virginia Tech testing has shown 10 percent of homes tested across the city had 25 parts per billion of lead or more -- far more than the allowable level -- 15 ppb -- set in federal guidelines.

As Flint River water contacts lead, particularly in areas where water is stagnant, it leaches into the water supply inside homes and businesses. Lead can leach from service lines and plumbing materials, including fixtures, faucets and fittings, according to the DEQ.

Although DEQ Director Dan Wyant said last week that Flint had a plan in place for corrosion control when the switch to the river was made, city and state officials have said previously that those plans were never fully developed as they waited on the results of two rounds of water testing inside city homes.

Last month, Flint Mayor Dayne Walling said the city was speeding up plans for making the city's water less corrosive.

The city has not yet spelled out what actions will be put in place to better control corrosion, but Richard Benzie, chief of field operations in the DEQ Office of Drinking Water and Municipal Assistance, has said plans typically involve the addition of supplements such as phosphates at the treatment plant.

Walling has also asked the state for $10 million to begin a program of removing lead service lines in the city, but the DEQ says it would likely take up to 15 years to complete the job of replacing them -- "Even if many crews were contracted."

Here's how that toxic lead gets into Flint water

Debunking that social media rumor on Flint water filters

Water, water everywhere and not a drop that's safe to drink -- Andrew Heller

How to get your free Flint water filter

All Stories

FLINT, MI -- After a number of water filter giveaways to help Flint residents combat high lead levels in their drinking water, city water customers can visit four locations Monday thru Friday 9 a.m. until 4 p.m. to get water filters.

Beginning Tuesday, Oct. 6, Flint residents enrolled in Health and Human Services assistance programs can pick up a water filter at the HHS offices at 125 E. Union Street and 4809 Clio Road.

Residents who are not enrolled in assistance programs should visit the Genesee County

Community Resource Department offices located at 2727 Lippincott Boulevard and 601 North Saginaw Street.

HHS clients who live in the city and who are enrolled in the Family Independence Program, Food Assistance Program, Child Development and Care, State Disability Assistance, or Social Security Insurance programs should bring valid identification and a copy of their water bill to their local HHS office to receive their free filter, the state's statement says.

City residents who are not active HHS clients should bring identification and their water bill to one of the GCCARD locations.

The area's non-emergency help line -- 211 -- is being used to share where Flint residents can find water filters for their homes.

The United Way of Genesee County said in a news release Tuesday, Oct. 6, that Central Michigan 211 can provide callers with details on eligibility for the filters and the location of service centers where they can be picked up.

Operators at 211 can help connect residents who cannot travel with agencies and organizations working to distribute filters to the homebound.

A filter giveaway was held at the University of Michigan-Flint at the Recreation Center on Saturday, Oct. 3. Originally, organizers were focusing on low-income families with children, pregnant women, and the elderly, but opened it up to all residents in the afternoon.

The United Way, University of Michigan-Flint, city of Flint, and other local agencies and businesses partnered to help distribute the filters.

Another filter giveaway was held on Sept. 1 by the Concerned Pastors for Social Action. The pastors distributed 1,500 water filters on a first-come, first served basis to Flint residents.

Health officials locally and on the state level have said there are no safe levels of lead. From children's development to health issues in adults – especially pregnant women – multiple sources say lead in the blood stream can be hazardous.

Michigan providing water filters in Flint after high lead readings

DETROIT – Michigan on Tuesday began distributing free water filters to residents of Flint, a week after confirming that some children had elevated levels of lead in their blood since the city began taking water from a nearby river.

The state last week confirmed a recent study at Hurley Children's Hospital that found increased lead levels in blood tests for children living in two Flint ZIP codes.

The city of about 100,000 residents started using the Flint River as its water source in 2014 after a state-appointed emergency manager ruled out a deal to keep buying water from Detroit, 66 miles (106 km) to the southeast.

The filters are being distributed to public assistance recipients and Flint residents through a partnership between the Michigan Department of Health and Human Services and the Genesee County Community Action Resource Department.

About 5,500 filters had already been given out through private donations.

Michigan Governor Rick Snyder on Friday announced a plan to address the city's drinking water. The state insists the water is safe to drink, but some families could experience higher lead levels if their homes have lead plumbing or service connections.

More on this...

14 mistakes you're making with your teeth

How much water do you actually need?

The plan calls for increased water testing, additional precautions for families with lead plumbing and long-term solutions to address the city's water infrastructure challenges. It does not include restoring Detroit as the water source.

Uber Collecting Bottled Water For Flint Schools

FLINT, Mich. (AP) – The ride-sharing service Uber is willing to give bottled water a lift to Flint.

Uber says it will pick up water donations for free from people in the Detroit area, through Thursday. The water will eventually be delivered to Flint schools.

Uber is advising people to open the Uber app, look for the “WaterforFlint” option and request a car.

Flint schools are discouraging kids from using drinking fountains because of lead leaching from old pipes in the city. Thousands of filters are also being distributed to residents.

Flint water

- Flint police block some media, public from water advisory meeting
- Here's how that toxic lead gets into Flint water
- Debunking that social media rumor on Flint water filters
- Water, water everywhere and not a drop that's safe to drink -- Andrew Heller
- How to get your free Flint water filter

All Stories

FLINT, MI – Health officials at the local and state levels have said it several times: There are no safe levels of lead.

Health advisories warning of some of the harmful effects of lead were issued by the city and county after elevated levels of lead were discovered in the drinking water of some Flint customers.

Meanwhile, the Flint School District began asking students to avoid school drinking fountains and bring bottled water to school.

The state issued an "action plan" for Flint water that includes filters and free water tests, among other items, and various community organizations have also begun donating filters and bottled water.

From children's development to health issues in adults – especially pregnant women – multiple sources say lead in the blood stream can be hazardous. Dr. Mona Hanna-Attisha, director of Hurley Medical Center's pediatric residency program, along with the Center for Disease Control and Prevention, say no amount of lead in the blood stream is safe.

"The bottom line is there are no safe levels of lead," Hanna-Attisha said in a previous interview.

Lead exposure can affect nearly every system in the body, according to the CDC website.

Here's the breakdown:

- Lead is a toxic metal that can enter drinking water from corroded pipes and plumbing materials. Flint's new water source is more corrosive to lead pipes, which is how lead may be entering the water system.
- Lead is most harmful to pregnant women, women who are nursing and children under age 6. Your child's mental and physical development can be irreversibly stunted by lead poisoning.
- Lead can damage the brain and kidneys, and can interfere with the production of red blood cells that carry oxygen to all parts of your body.
- More information: www.flintwaterinfo.com

How is too much lead harmful? Here are few ways:

- In pregnant woman, it can cause miscarriage or premature birth.
- A Hurley study looking at affects in children says there is vast evidence that supports the increased likelihood of decrease in IQ.
- A small change in mean IQ shifts the entire population IQ distribution, the study states.
- Reduces high achievers IQs (>130) and increases kids with low IQs (<70)
- The study also stated there is increased likelihood of ADHD behaviors, delinquent behaviors and arrests, total arrests and increased rates of arrests involving violent offenses
- Other health effects for lead poisoning in children include hematologic, cardiovascular, immunologic and endocrine, the Hurley study stated.

The Mayo Clinic lists symptoms of lead poisoning for children and adults.

Initially, lead poisoning can be hard to detect — even people who seem healthy can have high blood levels of lead. Signs and symptoms usually don't appear until dangerous amounts have accumulated, according to the Mayo Clinic website.

The signs and symptoms of lead poisoning in children may include:

- Developmental delay
- Learning difficulties
- Irritability
- Loss of appetite
- Weight loss
- Sluggishness and fatigue
- Abdominal pain
- Vomiting
- Constipation
- Hearing loss

Babies who are exposed to lead before birth may experience:

- Learning difficulties
- Slowed growth

Although children are primarily at risk, lead poisoning is also dangerous for adults.

Signs and symptoms in adults may include:

- High blood pressure
- Abdominal pain
- Constipation
- Joint pains
- Muscle pain
- Declines in mental functioning
- Pain, numbness or tingling of the extremities
- Headache
- Memory loss
- Mood disorders
- Reduced sperm count, abnormal sperm
- Miscarriage or premature birth in pregnant women

Flint had no plan to minimize lead corrosion in people's drinking water post river switch

Listen to today's Environment Report.

Confused about corrosion control? We were too.

In Flint, lead levels in some children's blood have spiked dramatically. Scientists believe the Flint River is part of the problem. Flint switched from Detroit's water system and started pulling water from the Flint River last year.

We've been hearing some conflicting things from state officials about what exactly Flint has been doing — if anything — to cut down on lead in the water.

The confusion

<img src="/sites/michigan/files/styles/default/public/201510/1394876976_4d5541c0d5_b.jpg" alt="Beach-Garland Street - Flint River Bridge.">

Credit Sarah Razak / Flickr - http://michrad.io/1LXrdJM

State regulators told federal regulators earlier this year by email that Flint is not using corrosion control.

Corrosion control is important because it helps prevent lead from leaching out of old pipes into people's tap water.

But on Friday, Michigan Department of Environmental Quality Director Dan Wyant said this:

"Know that when the city switched from Detroit sewer and water, that the city utilized corrosion controls," he said.

That directly conflicts with what the state said before.

After Friday's press conference, we asked DEQ spokesman Brad Wurfel to clarify. He then said the corrosion control Flint used was lime.

"Flint was trying to address the hardness of the water, so they chose lime to address the hardness," he said. "That is also a corrosion control agent. It's a recognized corrosion control agent. It just wasn't, it wasn't cutting it."

We ran this by some outside experts.

Daniel Giammar is an expert on lead in water. He's a professor of environmental engineering at Washington University in St. Louis, Missouri.

"Simply claiming to have lime addition as corrosion control is insufficient," he says.

Giammar told us that you can use lime for corrosion control, but you have to have a plan. You want to make sure your water hits a certain pH range and alkalinity so that you minimize the amount of lead in the water.

"Whether or not you have corrosion control isn't whether or not you're adding lime, but it's rather, are you achieving the target pH that you set out?" he says.

The softening process could be making the situation worse.

Marc Edwards is a civil engineering professor from Virginia Tech University and a nationally renowned expert on water treatment. He was also confused by Wyant's claim that Flint had corrosion controls in place. So, over this past weekend, he took a closer look at Flint's data.

He says the water softening treatment Flint is using is actually making Flint's water more corrosive.

“Even as they’re denying the water is corrosive and it’s causing this higher lead, the pH value is plummeting, it’s becoming more acidic,” Edwards says. “And it led me to wonder, I mean, are they even watching what’s happening to the pH of their water? It’s like flying a jumbo jet without checking your gas tank.”

We requested an interview with someone from Flint's water department, but they did not provide anyone to talk to us for this story by our deadline.

The DEQ's response

The DEQ says they have been keeping an eye on the pH of Flint’s water.

Liane Shekter Smith heads up DEQ’s Office of Drinking Water and Municipal Assistance.

"Absolutely, we've been monitoring the pH data. We monitored it prior to the switch to the Flint River and we monitored it since. And we've compared the pH data and there has not been a significant change."

Shekter Smith says they consider a pH of 7.5 to be acceptable. But both Marc Edwards and Daniel Giammar told us cities should shoot for a pH of 8 or above to minimize the amount of lead getting into drinking water. That's because you want the water to be less acidic to minimize corrosion.

Data available online from the City of Flint show that the pH of treated water leaving the plant has been trending downward - becoming more acidic. Monthly average pH measurements dropped from 8.07 in December 2014 to 7.34 in August 2015.

A key point here: there’s a difference between having some kind of treatment process that might work and having an approved corrosion control plan.

Yesterday, Shekter Smith confirmed that Flint does not have a corrosion control plan.

“At the time they proposed switching to the Flint River and implementing the lime softening treatment method, there was an indication that the pH control provided by that method perhaps would provide optimal corrosion control,” Shekter Smith says.

It’s clear that method didn’t work.

Tomorrow, city, state, and federal officials will get together to come up with some kind of plan to control the corrosion.

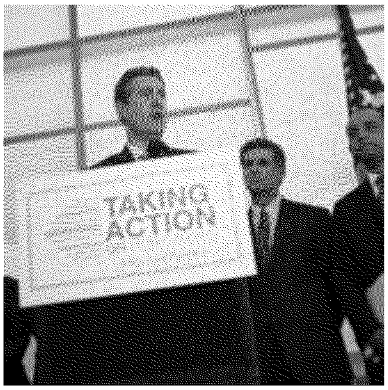
Michigan Governor Rick Snyder dedicating $1 million to purchase lead filters for Flint residents

Submitted by Diane Hoffman on Wed, 10/07/2015 - 16:58

http://nycity.today/content/286001-michigan-governor-rick-snyder-dedicating-1-million-purchase-lead-filters-flint



It is now that Michigan Gov. Rick Snyder has agreed that there are profound problems with Flint's water. For over a year, Flint residents have been saying that their water is not ok. They have complained about its bad smell, bad taste and also told that people have become sick after having it, but the state told them that the water was safe.

Flint's water had enormous amount of lead coming from aging pipes. It has been entering into the water. The problem has aggravated due to the failure of adding appropriate chemicals by local treatment plant.

For past so many years, the City of Flint has got its water from the Detroit Water and Sewerage Department. In 2013, the city chose to join the Karegnondi Water Authority. In 2014, it chose to pump water from the Flint River.

It is now that the governor's team has acknowledged that its data is not complete and there is a need to take action. Snyder is promising $1 million to purchase lead filters for Flint residents. He has ordered further testing and working on to improve corrosion control at the Flint water treatment plant. As per experts, Flint River was never a permanent solution to the city's water requirements.

It was just a short-term fix for the city that is making efforts to save money. Switching to river led Flint to save $7 million a year rather than $5 million.

After a public health emergency was declared Tuesday due to the ongoing water crisis in Flint, Michigan, the state is now distributing free water filters and bottled water to the city's residents, according to *Reuters*.

#FlintWater quality reaches crisis level http://t.co/mIDIasyiuk pic.twitter.com/MSBLYEIfL5

— Progress Michigan (@ProgressMich) September 25, 2015

Recent tests from a local children's hospital showed that children had elevated levels of lead in their blood a year after the city began using water from a local river instead of buying Lake Huron water through Detroit in order cut costs.

The tests "found the number of Flint kids under the age of 5 years old with above average lead levels nearly doubled city-wide and in some cases, tripled," reported FOX 2's Randy Wimbley.

"Our children are a top priority given the effects lead can have on their development," Mayor Walling said in a statement. "Any bottled water donations we receive will be used for our children and other high risk groups, such as our seniors."

It appears that the toxic metal had been entering drinking water through corroded pipes and plumbing materials, according to Flintwaterinfo.com.

Or, as Henry Henderson, the director of Natural Resources Defense Council's (NRDC) Midwest office, explained in a blog post, "the water from the Flint River, as treated, is far more corrosive than the Lake Huron water that had previously coursed through the City's pipes and water infrastructure."

"As a result of the change to corrosive river water," Henderson continued, "the aging lead pipes released higher concentrations of lead into Flint's homes. Despite the urgently stated concerns raised by residents and presented to state and local officials, the people of Flint were told their water was safe."

Based on state official's action plan for #flintwater, we can't let this crisis continue. http://t.co/th35Vp6g4Q pic.twitter.com/MHtH1HyzbX

— Senator Jim Ananich (@jimananich) October 2, 2015

Lead, which is most harmful to pregnant women, women who are nursing and children under age 6, can damage the brain and kidneys, and can interfere with the production of red blood cells. Lead poisoning can also irreversibly stunt a child's mental and physical development.

The U.S. Environmental Protection Agency says that 15 parts per billion (ppb) is the maximum recommended level of lead in household water. However, an alarming Flint Water Study found that about 10 percent of their local water samples had values of lead at levels of 25 ppb.

Local parent Lee-Anne Walters told *The Guardian* she was "shocked, angry … and hysterical" after learning in March that her son's immune system was compromised after unsafe lead exposure.

"I just couldn't believe that we were paying to poison our kids," she said.

To make matters worse, as *The Guardian* pointed out, Flint residents "pay some of the highest water rates in the U.S., in the community known for its economic decline."

Officials had been insisting the water in Flint was safe and within federal guidelines. But they finally shifted positions this week after a public health emergency was declared by Genesee County Sheriff Robert Pickell.

Reuters reported that on Friday Michigan Gov. Snyder announced a plan that calls for "increased water testing, additional precautions for families with lead plumbing and long-term solutions to address the city's water infrastructure challenges."

The plan does not include restoring Detroit as a water source.

FLINT, MI -- Flint's water crisis is garnering national attention after the issue was featured in a segment on the CBS Evening News.

"It's not safe to drink the water in Flint, Michigan," anchor Scott Pelley said Tuesday, Oct. 6, as he introduced the roughly two-minute long report.

RELATED: How the Flint water crisis emerged

The segment included interviews with residents affected by poor water conditions in the city and with Mayor Dayne Walling.

"I am angry that Flint's been put in this situation," Walling told reporter Dean Reynolds.

The report highlighted Flint's switch from treated Detroit water to treating its own water from the Flint River.

Controversy surrounding the change began not long after the switch when residents started to complain of foul-smelling, dirty water. The situation escalated when the city was found in violation of the Safe Drinking Water Act when high levels of trihalomethanes -- or TTHM -- a group of four chemicals that are formed as a byproduct of disinfecting water. Over many years, the chemicals could cause liver, kidney or central nervous system problems and an increased risk of cancer.

The controversy grew once a researcher from Virginia Tech discovered elevated levels of lead in the city's water. Researchers pointed to the corrosive nature of treated Flint River water as the cause, saying the water caused lead to leach from pipes and solder into the water supply. Lead concerns were expounded when a Hurley Medical Center researcher discovered elevated lead levels in Flint children since the water switch.

Poisoning People, the Future and the Public Interest in Flint, Michigan

Posted: 10/06/2015 6:38 pm EDT Updated: 10/06/2015 6:59 pm EDT

http://www.huffingtonpost.com/henry-henderson/poisoning-people-the-futu_b_8254390.html

SWITCHBOARD .nrdc.org Lead is a devastating toxin. It ravages the brain. Robs children of IQ points and brain function. And deprives our society of vast potential. It has cast a huge, destructive shadow across human civilization.

That's why Americans eliminated it from paint. From gasoline. And have struggled mightily to ban it from toys. The continuing negative impact of lead remains in soil, homes and infrastructure exposed to lead in the past, before we were able to ban it from products.

And in Flint, Michigan, its concentration in the drinking water is shockingly high.

Pipes and taps in Flint have brought water replete with toxic lead into homes for some time since the cash-strapped city shifted water sources from Detroit's treated supply drawn from Lake Huron, and began to pull water out of the Flint River.

All water isn't the same everywhere. The water from the Flint River, as treated, is far more corrosive than the Lake Huron water that had previously coursed through the City's pipes and water infrastructure. As a result of the change to corrosive river water, the aging lead pipes released higher concentrations of lead into Flint's homes. Despite the urgently stated concerns raised by residents and presented to state and local officials, the people of Flint were told their water was safe. This amazing situation has gone on repeatedly over the past year and a half. During which more and more lead-contaminated water has gone into homes, drinking glasses, baby formula, and cooking water.

Put simply and starkly: the water being delivered to the people of Flint is not safe.

Independent tests have demonstrated the city's water to be unfit for consumption. This is particularly the case with children, whose brains and bodies are developing, making them especially vulnerable to the poisonous impact of lead.

And yet, Flint's water pipes, treatment works and supply have not been fixed or effectively addressed. Instead of immediately switching the source back to Lake Huron water through Detroit, the city and state are taking baby steps--seemingly to buy time for a new water supply pipeline that will be completed next summer.

We don't think this is right. You probably don't either.

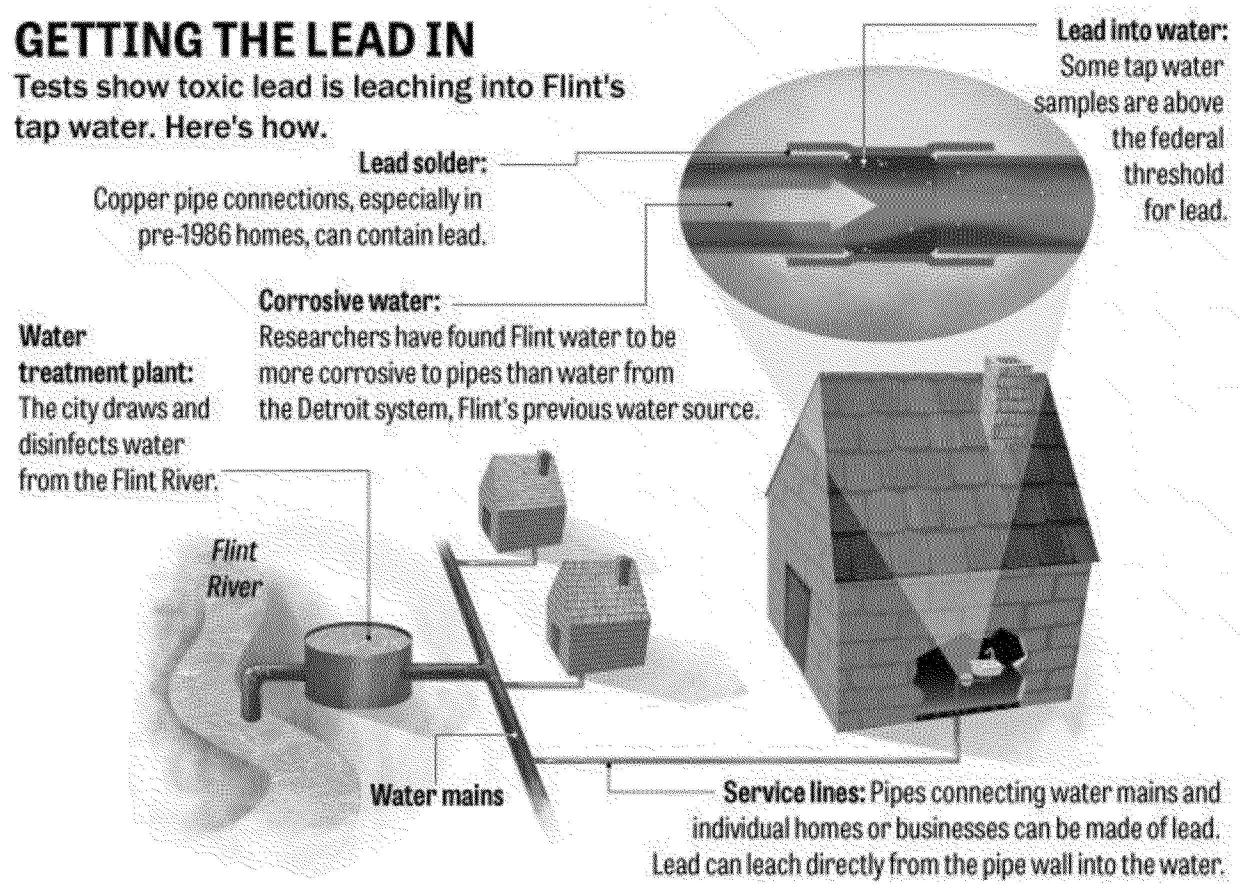
Because the situation is wrong and unacceptable, NRDC joined with local groups and the Michigan ACLU to demand emergency federal action under the Safe Drinking Water Act. If the City and State are not going to get the poison out of Flint's water, the federal government has authority to do so under emergency powers. Our group filed a petition with the U.S. Environmental Protection Agency last week to demand quick action.

We don't think anyone should be forced to drink dangerous water. Particularly, citizens of our great democracy should not have contaminated water delivered to their homes through the public water utility. Flint, Michigan is an American city; it was a manufacturing marvel that helped define the American Century with the production of cars and a strong, vibrant middle class; and, it happens to be a city in the center of the largest resource of fresh water in North America, the Great Lakes. Our fellow citizens deserve much, much better. There is strong moral responsibility to act and act quickly. The people of Flint should not drink lead-laced water for another day, let alone another year.

Flint, MI image by Axel Drainville via Flickr

Watch live: Experts meet amid Flint drinking water crisis

http://www.mlive.com/news/flint/index.ssf/2015/10/watch_live_advisory_committee.html



GETTING THE LEAD IN
Tests show toxic lead is leaching into Flint's tap water. Here's how.
Lead solder: Copper pipe connections, especially in pre-1986 homes, can contain lead.
Lead into water: Some tap water samples are above the federal threshold for lead.
Corrosive water: Researchers have found Flint water to be more corrosive to pipes than water from the Detroit system, Flint's previous water source.
Water treatment plant: The city draws and disinfects water from the Flint River.
Flint River
Water mains
Service lines: Pipes connecting water mains and individual homes or businesses can be made of lead. Lead can leach directly from the pipe wall into the water.

Reddit

FLINT, MI -- A blue ribbon panel of water experts that has been dormant for months is meeting this afternoon to discuss Flint's drinking water problems.

The committee is meeting on the third floor of Flint City Hall.

Mayor Dayne Walling said the committee will "discuss short, intermediate and long-term (plans) including filters, corrosion control, the (Detroit Water and Sewerage Department) option, lead service lines and the" Karegnondi Water Authority pipeline that officials expect to serve Flint at some point next year.

On a possible reconnection to Detroit, Walling said: "That option continues to be actively under discussion."

A livestream of the meeting is being made available by Sen. Jim Ananich, D-Flint, and Senate Democrats and can be viewed below.

Erin Brockovich highlights the Flint water fight

Posted By Lee DeVito on Wed, Oct 7, 2015 at 12:07 PM

http://www.metrotimes.com/Blogs/archives/2015/10/07/erin-brockovich-highlights-the-flint-water-fight

- □□□□□□□□ Photo credit: Eva Rinaldi from Sydney Australia,via Wikimedia Commons

- □□□□□□□□ Erin Brockovich

Environmental activist Erin Brockovich took to Facebook on Tuesday to slam Michigan authorities regarding Flint's drinking water controversy — and offered a shoutout to *Metro Times* and contributor Curt Guyette for covering the issue.

Brockovich posted a photo of Brad Wurfel, the Communications Director at Michigan Department of Environmental Quality, captioning the image with a lengthy tirade calling Wurfel a "spin doctor" and "paid distorter of truth" for his role in downplaying a July EPA memo and ongoing investigation that revealed the presence of lead in Flint's drinking water supply.

Brockovich then cited *Metro Times* contributor Curt Guyette's recent reporting on the issue, highlighting three times Wurfel had attempted to discredit or deny the ongoing investigations.

On Thursday, the Genesee County Health Department finally admitted there was a problem with Flint's water, declaring a public health emergency and urging citizens not to drink water that has not been tested or filtered.

As Guyette reported, further study of Flint's water quality was launched by a group of citizens working in conjunction with researchers at Virginia Tech and the ACLU of Michigan, who continued to study the issue despite Wurfel's denial. "If [they] had been willing to swallow that claim, children in Flint would still be getting lead poisoned," he wrote.

Read Guyette's story here or read it in this week's print edition of *Metro Times*. Read Brockovich's full post below:

Guyette: Federal Oversight Needed to Assure Water Safety in Flint

October 6th, 2015, 10:48 PM

http://www.deadlinedetroit.com/articles/13364/guyette_federal_oversight_needed_to_assure_water_safety_in_fl

THE WEAK HANDS OF THE POOR CAN GIVE NO MORE!!!
They Got $ So Rich We C

Residents of Flint protest outside City Hall in April (ACLU photo)

Curt Guyette, who has been reporting away for months on the Flint water problem, writes in Metro Times that federal oversight is needed to safeguard Flint's drinking water.

Guyette, an investigative reporter for the ACLU of Michigan, writes:

In the past few weeks, the problem of lead in Flint's drinking water has quickly gone from being a story largely ignored by the mainstream media to a scandal that's making headlines nationally.

Faced with overwhelming evidence, state and local officials who adamantly insisted for months that there was no problem have been forced to admit that their unequivocal assurances were completely false.

For that reason, the U.S. EPA needs to quickly respond to last week's formal petition calling upon the agency to step in and take a greater role in assuring that Flint's water is safe. Also needed is an investigation by an outside entity with subpoena powers to determine if laws were broken and, if so, who broke them.

One thing is certain: The MDEQ (Michigan Department of Environmental Quality) has failed miserably in its obligation to ensure that the public health is being protected. Just the opposite: The agency's consistent denials that a danger existed only served to create a false sense of security, keeping people from taking the actions needed to help limit their exposure to a potent neurotoxin that can cause irreversible damage — especially to children.

Lead levels in Mich. city have moms avoiding tap water

FLINT, Mich. — Outside a taco shop on Fifth Street, Estella Walker balances a gallon jug of water on top of the stroller that holds her 3-month-old son, DeWayne.

She's mixing bottles of formula for DeWayne and his 19-month-old sister Vanessa.

Nadene Strickland sits outside her home on the city's north side, watching her grandsons play basketball. She still drinks the water. She can't afford bottled.

Shopping at the local farmers market with five of her seven children, Tena Fransioli says she hasn't used tap water in a long time.

Across town, LeeAnne Walters' kids are having bath night. She heats bottled water in the microwave and carries it to the bathroom, slowly filling the tub.

USA TODAY

Yards pose health risk to kids, moms near factory site

In Melissa Mays' bathroom, a reminder is taped to the wall: To brush your teeth, use the bottled water on the bathroom counter.

This is life in Michigan's seventh largest city, where you really should not drink the water.

“I was hysterical. I cried when they gave me my first lead report.”

LeeAnne Walters, Flint, Mich.

For more than a year, Flint residents have been screaming that their water wasn't OK, that it smelled bad, tasted bad, looked bad and was making them sick.

Few listened. The state told them, again and again, that the water was safe — that contamination had been handled and that the water was within acceptable levels.

Not until the end of September did Michigan Gov. Rick Snyder finally acknowledge the profound problems with Flint's water. Lead, from aging pipes, is leaching into the water the city pumps from the Flint River, exacerbated by a local treatment plant's failure to add appropriate chemicals.

For decades, the City of Flint bought its water from the Detroit Water and Sewerage Department, water that arrived treated to make it safe for human consumption. In 2013, the city opted to join the Karegnondi Water Authority along with Genesee, Lapeer and Sanilac counties, and in 2014 to pump water from the Flint River while the new system is under construction.

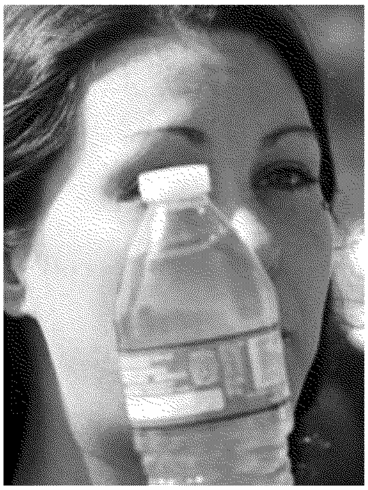
Joining the Karegnondi Water Authority didn't mandate the end of Flint's relationship with Detroit's water system. Genesee County, for example, has continued to purchase its water from Detroit, albeit at a premium, county drain commissioner Jeff Wright said.

USA TODAY

N.C. residents worry over coal ash ponds

In Flint, both decisions were made during the appointments of four different emergency managers, turnaround guys the governor brought in to fix Flint's budget woes, and with the approval of the Michigan Department of Environmental Quality, which monitors water quality and treatment.

For most of the past year, the state has told residents that the water here was fine, that it met the standards of the Safe Drinking Water Act. The state, for the most part, still says that's true.



Jessica Owens of Flint, Mich., holds a bottle of drinking water Oct. 2, 2015, that came from her home two weeks previous that she said had been proven to contain lead. (Photo: Ryan Garza, Detroit Free Press)

But now the governor's team acknowledges that its data are incomplete and that high lead levels found in the water for this city of 99,000 — and an increasing number of Flint kids with elevated blood-lead levels — merit action. Snyder is dedicating $1 million to purchase lead filters for Flint residents, has ordered further testing and is improving corrosion control at the Flint water treatment plant, which should help keep lead out of the water.

Flint River never was meant to be a long-term answer to the city's water needs. It was a short-term fix for a city scrambling to save money.

When Flint joined the Karegnondi Water Authority, the Detroit Water and Sewerage Department terminated its 35-year contract with the city. To continue to purchase Detroit water, Flint would have had to renegotiate a short-term contract at a higher cost.

Switching to river water saved Flint $5 million to $7 million a year.

The region had long wanted its own water system, Wright said. Because of its elevation and distance from Detroit, Flint paid a higher rate for Detroit water than most far-flung communities.

Only one pipeline stretches that far north, and that means Flint — and the other Karegnondi Water Authority communities — are vulnerable. In 2000, the pipeline went down, leaving 250,000 people without water for four days, he said.

It had happened before, and it has happened since. The area needed a second pipeline, but Detroit wouldn't build it without a 30-year commitment from the communities the pipeline would serve.

USA TODAY

Audit faults EPA in delays probing lead factory dangers

At the rates Detroit Water is obliged to charge, the communities were reluctant to make that commitment, Wright said.

When the Karegnondi Water Authority system is complete next year, Flint will be back on Lake Huron water, same as Detroit. But unless its treatment plant is capable of properly treating the water, its problems will not end.

“There is no safe level of lead.”

Dr. Eden Wells, Michigan Department of Health and Human Services

Because much of this area's infrastructure is composed of copper pipes with lead welds, systems like Detroit's add anticorrosive agents to prevent lead from leaching into the water. River water is more difficult to treat than lake water, and its chemistry can change daily, Wright said.

Because the Flint River is shallow compared with Lake Huron its temperature is higher. All of this affects the composition of the water and the chemicals required to make it potable and safe to pass through old pipes.

When Flint started pumping river water, its local plant either never employed corrosion control or didn't use sufficient control. Remarks that Dan Wyant, Michigan Department of Environmental Quality chief, made Friday didn't make that entirely clear and Snyder's office didn't respond to an e-mail seeking clarification.

It didn't take long for residents to notice a difference. By June 2014, according to the city, residents began to complain about the water.

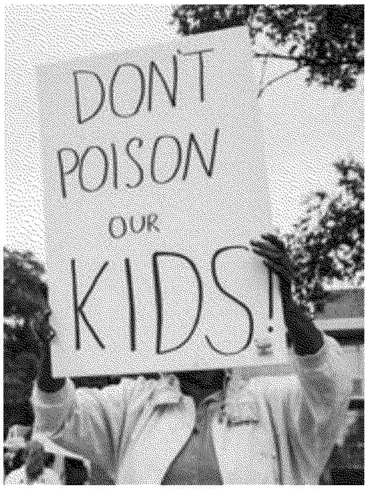
And as water quality suffered, Flint residents' bills have gone up, thanks to rate increases imposed first by Mayor Dayne Walling, and then built into the budget by Snyder's emergency managers. A Genesee Circuit Court judge issued an injunction in August rolling back a 35% rate increase imposed in 2011.

USA TODAY

Lead poisoning's impact: Kids suspended more at school

A Virginia Tech University researcher tested water from hundreds of Flint homes, releasing a report showing elevated lead levels in the city's children. State data showed the highest rates of lead in Flint's water in 20 years.

And a blood test analysis that a Michigan pediatric researcher released Sept. 24 and the state Department of Health and Human Services confirmed Friday, found the percentage of Flint kids with elevated blood-lead levels — 5 micrograms per deciliter or more — jumped from 2.1% in the 20 months prior to Sept. 15, 2013, to 4.0% between Jan. 1 and Sept. 15 this year. In certain ZIP codes, it doubled since the switch.



Flint residents protest the water quality in the city Oct. 5, 2015, outside City Hall in Flint, Mich. (Photo: Danny Miller, AP)

In children, exposure to lead can cause behavior or attention problems, hearing problems, kidney damage, reduced IQ and slowed body growth, among other effects. The damage is irreversible.

"There is no safe level of lead," said Dr. Eden Wells, the health department's chief medical executive.

For children like Gavin, one of LeeAnne Walters' 4-year-old twins, the potential for problems is more serious. Because Gavin's immune system is compromised — a condition unrelated to the water — he's more susceptible to the effects of lead.

The whole family developed rashes, likely because of a disinfectant added to the water to combat coliform bacteria.

Gavin stopped gaining weight, lagging his twin; now he's 37 pounds, compared with his twin's 52 pounds. Doctors weren't sure what was happening.

Then she asked the city to test her water. It showed astronomically high rates of lead, prompting an urgent e-mail exchange with the city, the state Department of Environmental Quality and the U.S. Environmental Protection Agency, according to documents obtained by the American Civil Liberties Union through the Freedom of Information Act.

Walters said she received an urgent call from city hall advising her to stop using her water.

USA TODAY

Lead poisoning toll revised to 1 in 38 young kids

Lead screening showed that Gavin's blood-lead levels had soared, up to 6.5 micrograms per deciliter of blood from 2, before the switch.

"I was hysterical," Walters said. "I cried when they gave me my first lead report."

Before that, she'd pushed her kids to drink water instead of juice or soda.

"I'm trying to do my job as a mom," she said. Now, "my kids will never drink tap water again."

One of the worst things about lead is that it's hard to know exactly how it will manifest.

USA TODAY

EPA fails to revise key lead-poisoning hazard standards

"What's the difference going to be between Gavin and his brother in school? Is he going to have more issues as this progresses?" Walters asked.

That's what haunts Mays, who said her family has experienced a range of health problems she links to the water. Mays and Walters have become relentless advocates for safe water, leading protests, interacting with Virginia Tech researchers and challenging city and state assurances that the water was OK.

These days, even Mays' cat drinks bottled water.

USA TODAY

Lead poisoning: What parents can do

"I pushed them to drink water: 'Put down that juice, go get some water,' " she said of her teenage sons. "Lead is in our blood."

As Mays' children grow, she said she'll always wonder whether any problem is because of lead or would it have happened anyway.

"I'll never know," she said.

Flint River Fest canceled amid city's drinking water problems

By Steve Carmody • 6 hours ago

ShareTwitter Facebook Google+ Email

Flint's drinking water controversy has led to the cancelation of a festival celebrating the Flint River.

The Flint River

Credit Steve Carmody / Michigan Radio

Tests link the corrosive nature of the river water to high lead levels in Flint tap water. Complaints about the quality of Flint's drinking water have been escalating since the city switched from Detroit water to the Flint River last year.

Rebecca Fedewa is with the Flint River Watershed Coalition, one of the organizers of River Fest.

She says organizers of Flint River Fest were worried Friday's event would not be the showcase for the Flint River they intended.

"It is a great recreational resource. It's a huge asset for the city, and that's what we wanted to show people," says Fedewa. "With the drinking water situation, we felt it could just cast a cloud over what we were trying to do."

Organizers hope to reschedule Flint River Fest for the Spring.

Flint police block some media, public from water advisory meeting

Print Email

By Ron Fonger | rfonger1@mlive.com
on October 07, 2015 at 4:08 PM, updated October 07, 2015 at 4:18 PM
http://www.mlive.com/news/flint/index.ssf/2015/10/flint_police_block_press_publi.html

The scene outside a meeting of Flint's Technical Advisory Committee today, Oct. 7.Ron Fonger | The Flint Journal

FLINT, MI -- City police blocked the door outside the meeting room of a committee of water experts today, Oct. 7, leaving some news reporters and the public outside.

Flint spokesman Jason Lorenz said City Administrator Natasha Henderson ordered the arrangement because the room where the committee was meeting in City Hall was too small to accommodate non-committee members.

The Technical Advisory Committee, which has about 30 members, has been dormant for months, but was singled out by state officials last month as being a key part of improving Flint's water quality moving forward.

High levels of lead in city water and in the blood of children and infants since the city changed its water source in April 2014 have triggered a public health emergency here, including the mass distribution of water filters.

Mayor Dayne Walling told The Flint Journal-MLive earlier this week when and where the committee meeting would be today and indicated it was open to the public.

But when citizens and journalists showed up before the meeting started at 2 p.m., they were turned away from the door by police.

As the meeting started, a door to the City Council meeting room was left open. Some reporters, including a Flint Journal reporter, were allowed inside only as chairs opened up -- about 25 minutes after the meeting started.

The committee is discussing issues including the potential for the city to return to purchasing Lake Huron water from the Detroit Water and Sewerage Department.

Formed in March by Walling and former emergency manager Jerry Ambrose, the advisory committee has met just twice, but it has grown to include an expert appointed to serve by the U.S. Environmental Protection Agency's Office of Research and Development.

In announcing an "action plan" for Flint water Friday, Oct. 2, state officials touted the committee's role in ensuring "the best technology, practices and science are being followed" going forward.

Here's how that toxic lead gets into Flint water

Debunking that social media rumor on Flint water filters

Water, water everywhere and not a drop that's safe to drink -- Andrew Heller

How to get your free Flint water filter

All Stories

Confirming Brita faucet filter removes lead Reporter Sarah Schuch calls a Brita customer service representative and confirms that their faucet mount filters remove lead, and are NSF certified to do so.

FLINT, MI – The question has been spreading on social media and through the neighborhoods: Are the free faucet water filters being handed out in Flint certified to remove lead?

The answer is yes. Both NSF International -- the organization that certifies consumer products for various safety standards -- and Brita confirmed that all Brita faucet mount filters, whether white or chrome, are certified to reduce lead in drinking water.

A video making the rounds on Facebook shows a man calling Brita customer service and asking if the filters remove lead. According to the video, a response from a woman identifying herself as a customer service representative named Camille says the Brita faucet filter lost its NSF certification to remove lead. The woman claimed the packaging that says the filter is NSF certified is outdated, and the filter is no longer certified.

The Facebook video, posted Tuesday evening, had been viewed more than 10,000 times as of 1 p.m. Wednesday.

The information given by "Camille" over the phone in the video is false, according to NSF, a Flint Journal phone call to Brita's customer service and a follow-up phone call to a Brita representative.

David Kargas, a spokesman for Brita, confirmed that the information heard on the video is incorrect, and there is no issue with outdated packaging. After checking into the situation, Kargas said the customer service representative pulled up the wrong Brita model number, and therefore gave incorrect information.

"We have worked with our customer service team to correct this," he said in an email.

"All Brita faucet mount filters, including the 20,000 faucet mount filters distributed this week by state and local organizations, are certified by NSF International to remove 99.3 percent of lead from tap water that has a lead concentration of 150 parts per billion – far higher than what has been reported in Flint," Kargas said.

"There is no possible issue with old or outdated packaging," he said. "Quite simply, all Brita Faucet Mount filters are certified by NSF International to reduce lead."

EASIER 1-CLICK FILTER REPLACEMENT
BRITA
Healthier, Great-Tasting Water
1 SYSTEM/SISTEMA
1 FILTER/FILTRO

One of the Brita faucet mount filters being given away in Flint, Michigan.MLive.com

Kargas said he was surprised to hear early Wednesday morning of the video going around social media.

"It's of paramount importance to us that we are providing the information not just in this instance but in all instances," Kargas said. "We've been working with a variety of different folks in Flint over the past few days. ... Seeing the wrong information going around is discouraging to us."

According to Brita's website, the pitcher and dispenser filters do not remove lead but the faucet filters do. The faucet filters are the ones being given out in Flint.

NSF International also confirmed that the Brita faucet filters will remove 99.3 percent of lead.

NSF International, the public health and safety organization that tests and certifies residential drinking water filtration systems, has confirmed that the three water filter systems being distributed by officials in Flint are currently certified by NSF International for lead reduction, according to a written statement.

"Specifically, Brita Faucet Filtration System, model number SAFF-100 (in white, black or chrome), the PUR Faucet Mount, model number FM-3700B, and the Zero Technologies Water Treatment Pour Through Pitcher, model number ZD-018, are certified for lead reduction in accordance with NSF/ANSI 53 – Drinking Water Treatment Unit Standard for Health Effects," the statement read.

Health advisories warning of some of the harmful effects of lead were issued by the city and county after elevated levels of lead were discovered in the drinking water of some Flint customers.

Meanwhile, the Flint School District began asking students to avoid school drinking fountains and bring bottled water to school.

The state issued an "action plan" for Flint water that includes filters and free water tests, among other items, and various community organizations have also begun donating filters and bottled water.

A call to the Brita customer service line (video above) asked about the Brita faucet filter model SAFF-100 – the brand being handed out at GCARD and other locations -- and was told it does remove lead from the water.

On the filter's box it reads NSF/ANSI Standard 53, which shows that it is certified to remove lead.

Individuals wishing to verify that a specific filter is NSF certified can do so via the NSF website. Here are the links to verify each certification: Brita Faucet Filter System SAFF-100, PUR Faucet Water Filter System and the Zero Water Technologies Water Pitcher Filtration System

Consumers can contact NSF International at info@nsf.org or 1-800-673-8010 for any additional questions.

Additionally NSF International has other resources for the consumer regarding drinking water safety:

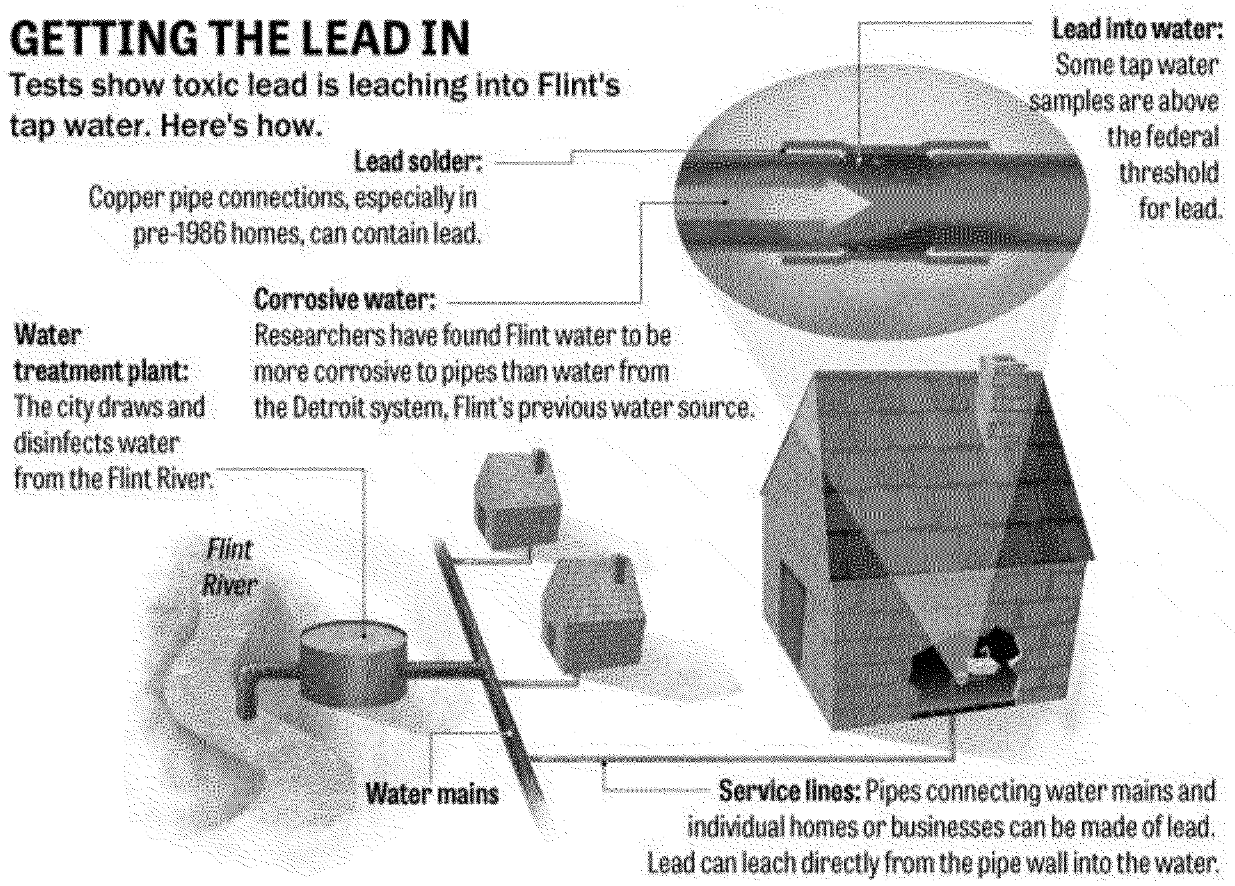
Here's how that toxic lead gets into Flint water



GETTING THE LEAD IN
Tests show toxic lead is leaching into Flint's tap water. Here's how.
Lead solder: Copper pipe connections, especially in pre-1986 homes, can contain lead.
Lead into water: Some tap water samples are above the federal threshold for lead.
Corrosive water: Researchers have found Flint water to be more corrosive to pipes than water from the Detroit system, Flint's previous water source.
Water treatment plant: The city draws and disinfects water from the Flint River.
Flint River
Water mains
Service lines: Pipes connecting water mains and individual homes or businesses can be made of lead. Lead can leach directly from the pipe wall into the water.

Debunking that social media rumor on Flint water filters

Water, water everywhere and not a drop that's safe to drink -- Andrew Heller

How to get your free Flint water filter

All Stories

FLINT, MI -- Tests show water leaving Flint's treatment plant is lead free, but by the time it reaches the tap, it sometimes has elevated levels of lead, and here's why.

Since April 2014, the city has drawn raw water from the Flint River before treating it at its plant on Dort Highway.

Water is pumped into pipes that carry it to about 31,000 homes and businesses in the city, an estimated half of which have individual lead service lines.

Water from Lake Huron, which the city had purchased from Detroit since the 1960s, was far less corrosive than water that's being produced from the river today, according to researchers from Virginia Tech university.

The city's own testing has also shown lead levels have been rising since the city began using the Flint River as its water source. Virginia Tech testing has shown 10 percent of homes tested across the city had 25 parts per billion of lead or more -- far more than the allowable level -- 15 ppb -- set in federal guidelines.

As Flint River water contacts lead, particularly in areas where water is stagnant, it leaches into the water supply inside homes and businesses. Lead can leach from service lines and plumbing materials, including fixtures, faucets and fittings, according to the DEQ.

Although DEQ Director Dan Wyant said last week that Flint had a plan in place for corrosion control when the switch to the river was made, city and state officials have said previously that those plans were never fully developed as they waited on the results of two rounds of water testing inside city homes.

Last month, Flint Mayor Dayne Walling said the city was speeding up plans for making the city's water less corrosive.

The city has not yet spelled out what actions will be put in place to better control corrosion, but Richard Benzie, chief of field operations in the DEQ Office of Drinking Water and Municipal Assistance, has said plans typically involve the addition of supplements such as phosphates at the treatment plant.

Walling has also asked the state for $10 million to begin a program of removing lead service lines in the city, but the DEQ says it would likely take up to 15 years to complete the job of replacing them -- "Even if many crews were contracted."

FLINT, MI -- After a number of water filter giveaways to help Flint residents combat high lead levels in their drinking water, city water customers can visit four locations Monday thru Friday 9 a.m. until 4 p.m. to get water filters.

Beginning Tuesday, Oct. 6, Flint residents enrolled in Health and Human Services assistance programs can pick up a water filter at the HHS offices at 125 E. Union Street and 4809 Clio Road.

Residents who are not enrolled in assistance programs should visit the Genesee County

Community Resource Department offices located at 2727 Lippincott Boulevard and 601 North Saginaw Street.

HHS clients who live in the city and who are enrolled in the Family Independence Program, Food Assistance Program, Child Development and Care, State Disability Assistance, or Social Security Insurance programs should bring valid identification and a copy of their water bill to their local HHS office to receive their free filter, the state's statement says.

City residents who are not active HHS clients should bring identification and their water bill to one of the GCCARD locations.

The area's non-emergency help line -- 211 -- is being used to share where Flint residents can find water filters for their homes.

The United Way of Genesee County said in a news release Tuesday, Oct. 6, that Central Michigan 211 can provide callers with details on eligibility for the filters and the location of service centers where they can be picked up.

Operators at 211 can help connect residents who cannot travel with agencies and organizations working to distribute filters to the homebound.

A filter giveaway was held at the University of Michigan-Flint at the Recreation Center on Saturday, Oct. 3. Originally, organizers were focusing on low-income families with children, pregnant women, and the elderly, but opened it up to all residents in the afternoon.

The United Way, University of Michigan-Flint, city of Flint, and other local agencies and businesses partnered to help distribute the filters.

Another filter giveaway was held on Sept. 1 by the Concerned Pastors for Social Action. The pastors distributed 1,500 water filters on a first-come, first served basis to Flint residents.

Health officials locally and on the state level have said there are no safe levels of lead. From children's development to health issues in adults – especially pregnant women – multiple sources say lead in the blood stream can be hazardous.

Michigan providing water filters in Flint after high lead readings

DETROIT – Michigan on Tuesday began distributing free water filters to residents of Flint, a week after confirming that some children had elevated levels of lead in their blood since the city began taking water from a nearby river.

The state last week confirmed a recent study at Hurley Children's Hospital that found increased lead levels in blood tests for children living in two Flint ZIP codes.

The city of about 100,000 residents started using the Flint River as its water source in 2014 after a state-appointed emergency manager ruled out a deal to keep buying water from Detroit, 66 miles (106 km) to the southeast.

The filters are being distributed to public assistance recipients and Flint residents through a partnership between the Michigan Department of Health and Human Services and the Genesee County Community Action Resource Department.

About 5,500 filters had already been given out through private donations.

Michigan Governor Rick Snyder on Friday announced a plan to address the city's drinking water. The state insists the water is safe to drink, but some families could experience higher lead levels if their homes have lead plumbing or service connections.

More on this...

14 mistakes you're making with your teeth

How much water do you actually need?

The plan calls for increased water testing, additional precautions for families with lead plumbing and long-term solutions to address the city's water infrastructure challenges. It does not include restoring Detroit as the water source.

- Water, water everywhere and not a drop that's safe to drink -- Andrew Heller
- How to get your free Flint water filter

All Stories

FLINT, MI – Health officials at the local and state levels have said it several times: There are no safe levels of lead.

Health advisories warning of some of the harmful effects of lead were issued by the city and county after elevated levels of lead were discovered in the drinking water of some Flint customers.

Meanwhile, the Flint School District began asking students to avoid school drinking fountains and bring bottled water to school.

The state issued an "action plan" for Flint water that includes filters and free water tests, among other items, and various community organizations have also begun donating filters and bottled water.

From children's development to health issues in adults – especially pregnant women – multiple sources say lead in the blood stream can be hazardous. Dr. Mona Hanna-Attisha, director of Hurley Medical Center's pediatric residency program, along with the Center for Disease Control and Prevention, say no amount of lead in the blood stream is safe.

"The bottom line is there are no safe levels of lead," Hanna-Attisha said in a previous interview.

Lead exposure can affect nearly every system in the body, according to the CDC website.

Here's the breakdown:

- Lead is a toxic metal that can enter drinking water from corroded pipes and plumbing materials. Flint's new water source is more corrosive to lead pipes, which is how lead may be entering the water system.
- Lead is most harmful to pregnant women, women who are nursing and children under age 6. Your child's mental and physical development can be irreversibly stunted by lead poisoning.
- Lead can damage the brain and kidneys, and can interfere with the production of red blood cells that carry oxygen to all parts of your body.
- More information: www.flintwaterinfo.com

How is too much lead harmful? Here are few ways:

- In pregnant woman, it can cause miscarriage or premature birth.
- A Hurley study looking at affects in children says there is vast evidence that supports the increased likelihood of decrease in IQ.
- A small change in mean IQ shifts the entire population IQ distribution, the study states.
- Reduces high achievers IQs (>130) and increases kids with low IQs (<70)
- The study also stated there is increased likelihood of ADHD behaviors, delinquent behaviors and arrests, total arrests and increased rates of arrests involving violent offenses
- Other health effects for lead poisoning in children include hematologic, cardiovascular, immunologic and endocrine, the Hurley study stated.

The Mayo Clinic lists symptoms of lead poisoning for children and adults.

Initially, lead poisoning can be hard to detect — even people who seem healthy can have high blood levels of lead. Signs and symptoms usually don't appear until dangerous amounts have accumulated, according to the Mayo Clinic website.

The signs and symptoms of lead poisoning in children may include:

- Developmental delay
- Learning difficulties
- Irritability
- Loss of appetite
- Weight loss
- Sluggishness and fatigue
- Abdominal pain
- Vomiting
- Constipation
- Hearing loss

Babies who are exposed to lead before birth may experience:

- Learning difficulties
- Slowed growth

Although children are primarily at risk, lead poisoning is also dangerous for adults.

Signs and symptoms in adults may include:

- High blood pressure
- Abdominal pain
- Constipation
- Joint pains
- Muscle pain
- Declines in mental functioning
- Pain, numbness or tingling of the extremities
- Headache
- Memory loss
- Mood disorders
- Reduced sperm count, abnormal sperm
- Miscarriage or premature birth in pregnant women

Put Flint back on Detroit water ASAP, expert panel tells mayor, governor

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 07, 2015 at 5:42 PM

FLINT, MI -- The city should end its use of the Flint River as a water source, a blue ribbon advisory committee recommended Wednesday, Oct. 7.

Flint's Technical Advisory Committee, appointed earlier this year to make recommendations aimed at improving the safety and quality of Flint water, did not vote.

But there was no doubt about the sentiments of the group, which includes experts in water science, health and engineering.

"We need to switch to a different water source, and right now. The quickest way to do that is (the Detroit Water and Sewerage Department)," said Dr. Lawrence Reynolds, president and chief executive officer of Mott Children's Health Center. "We can't stay in the spot we are in right now."

Flint Department of Public Works Director Howard Croft, who ran Wednesday's meeting, said he was comfortable reporting -- without a vote -- that the "Technical Advisory Committee is recommending going to the DWSD."

The committee's recommendation comes after the declaration of a health emergency because of rising lead levels in Flint water and in children's blood.

More than 16 months after the city's bold switch from buying Lake Huron water from Detroit to using the Flint River for water, almost every key official and representative of major institutions in the city have declared the experiment a mistake.

Last week, Gov. Rick Snyder announced an action plan for improving Flint water, including $1 million for lead-clearing faucet filters, but stopped short of committing state funds to help reconnect Flint to Detroit water.

State officials said they would monitor the recommendations from the Technical Advisory Committee, which includes representatives of the state Department of Environmental Quality and Dr. Eden Wells, chief medical executive for the Michigan Department of Health & Human Services.

"We continue to work with Flint city and community leaders about potential next steps," said Dave Murray, spokesman for Gov. Rick Snyder's office, in response to the committee's recommendation Wednesday.

Virginia Tech university professor Marc Edwards said Wednesday that a change to Detroit water should result in a "dramatic reduction" of lead within a month.

Flint police block some media, public from water advisory meeting

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 07, 2015 at 4:08 PM, updated October 07, 2015 at 4:18 PM

FLINT, MI -- City police blocked the door outside the meeting room of a committee of water experts today, Oct. 7, leaving some news reporters and the public outside.

Flint spokesman Jason Lorenz said City Administrator Natasha Henderson ordered the arrangement because the room where the committee was meeting in City Hall was too small to accommodate non-committee members.

The Technical Advisory Committee, which has about 30 members, has been dormant for months, but was singled out by state officials last month as being a key part of improving Flint's water quality moving forward.

High levels of lead in city water and in the blood of children and infants since the city changed its water source in April 2014 have triggered a public health emergency here, including the mass distribution of water filters.

Mayor Dayne Walling told The Flint Journal-MLive earlier this week when and where the committee meeting would be today and indicated it was open to the public.

But when citizens and journalists showed up before the meeting started at 2 p.m., they were turned away from the door by police.

As the meeting started, a door to the City Council meeting room was left open. Some reporters, including a Flint Journal reporter, were allowed inside only as chairs opened up -- about 25 minutes after the meeting started.

The committee is discussing issues including the potential for the city to return to purchasing Lake Huron water from the Detroit Water and Sewerage Department.

Formed in March by Walling and former emergency manager Jerry Ambrose, the advisory committee has met just twice, but it has grown to include an expert appointed to serve by the U.S. Environmental Protection Agency's Office of Research and Development.

In announcing an "action plan" for Flint water Friday, Oct. 2, state officials touted the committee's role in ensuring "the best technology, practices and science are being followed" going forward.

Experts say Flint should return to Detroit water

By STEVE CARMODY, Michigan Radio • 23 MINUTES AGO

A panel of experts is recommending the city of Flint return to Detroit's water system.

As protesters marched outside Flint city hall chanting “lead free water,” inside local, state and national health and water experts agreed that change is needed.

Since the city switched its drinking water source, from the Detroit Water and Sewerage Department to the Flint River in April 2014, there have been problems. At first, people complained about the taste, smell and appearance of their tap water. Eventually, the water system had problems with levels of E. coli and chemicals.

Finally, this summer, tests started showing serious levels of lead in the drinking water. State and local groups have been handing out water filters and bottled water in recent weeks to people too scared to drink from their own kitchen faucets.

“We must stay focused on the people part of the answer,” says Dr. Lawrence Reynolds, the president of Mott Children’s Health Center and a member of the expert panel.

Reynolds agreed with other committee members that Flint would be better off going back to Detroit water until a new water pipeline from Lake Huron is completed next year.

“I think we can feel that we’ve done it the right way,” says Croft, referring to the process of reviewing the scientific evidence to support a switch.

Croft says it would take about two weeks to physically start up the pipeline to Detroit. However, the process will surely take longer.

Croft says the next step is in the mayor’s and city administrator’s hands.

Switching back to Detroit water won't be cheap. City officials estimate the cost at more than $1 million a month. City leaders say they'll need the state's help to pay the cost of switching back.

While the experts agreed switching back to Detroit water is the best option, they also agreed it's not a cure-all.

"There are risks with an older infrastructure," says Mayor Dayne Walling. "Even with a Detroit water source, even with corrosion control."

Researchers from Virginia Tech say the corrosive nature of the Flint River has done extensive damage to Flint's lead and iron pipes. Switching to a different water source will help lessen the presence of lead in the water, but it won't eliminate it.

http://www.freep.com/story/news/local/michigan/2015/10/07/experts-recommend-flint-reconnect-detroit-water/73531312/

Experts recommend Flint reconnect to Detroit water

By John Wisely, Detroit Free Press 5:19 p.m. EDT October 7, 2015

A panel of experts recommended this afternoon that Flint reconnect to Detroit's water system to improve the drinking water quality in a city plagued by elevated lead levels.

When a member of the committee asked whether anyone could think of a public health reason to maintain the current supply, which draws water from the Flint River, the room fell silent.

The recommendation echoes a request from Flint Mayor Dayne Walling, who has said reconnecting is the best way to address the public health issues created by lead in the water.

"It's estimated to cost $12 million over nine months," Walling said. "I've made a request to the governor to work with the Legislature to identify the funds."

Flint has been under state emergency financial management for several years and the money isn't in the budget, Walling said. In addition to finding the money, the city also must negotiate a contract with Detroit and with Genesee County, which owns the transmission lines that would carry the water from Detroit's main to Flint's water plant where it would be fed into the city's distribution system.

The committee's recommendation came after a raucous meeting in a small room on the third floor of Flint's City Hall. Members of the committee filled the room and the city stationed police at the door to keep the public outside the door, which was left open so people could listen.

The committee is an informal body made up of experts from the water industry, public health and other areas.

"It's just for committee members," city spokesman Jason Lorenz said.

More than a dozen residents waited outside, angry that they were not allowed inside. Two police officers guarded the door.

The council chamber, which seats several hundred people, remained empty.

Lorenz said the meeting could not be moved to the council chambers because the committee needed a table on which to conduct business.

http://www.huffingtonpost.com/henry-henderson/poisoning-people-the-futu_b_8254390.html

Poisoning People, the Future and the Public Interest in Flint, Michigan

Henry Henderson, Natural Resources Defense Council Midwest Program Director
Huffington Post

Lead is a devastating toxin. It ravages the brain. Robs children of IQ points and brain function. And deprives our society of vast potential. It has cast a huge, destructive shadow across human civilization.

That's why Americans eliminated it from paint. From gasoline. And have struggled mightily to ban it from toys. The continuing negative impact of lead remains in soil, homes and infrastructure exposed to lead in the past, before we were able to ban it from products.

And in Flint, Michigan, its concentration in the drinking water is shockingly high.

Pipes and taps in Flint have brought water replete with toxic lead into homes for some time since the cash-strapped city shifted water sources from Detroit's treated supply drawn from Lake Huron, and began to pull water out of the Flint River.

All water isn't the same everywhere. The water from the Flint River, as treated, is far more corrosive than the Lake Huron water that had previously coursed through the City's pipes and water infrastructure. As a result of the change to corrosive river water, the aging lead pipes released higher concentrations of lead into Flint's homes. Despite the urgently stated concerns raised by residents and presented to state and local officials, the people of Flint were told their water was safe. This amazing situation has gone on repeatedly over the past year and a half. During which more and more lead-contaminated water has gone into homes, drinking glasses, baby formula, and cooking water.

Put simply and starkly: the water being delivered to the people of Flint is not safe.

Independent tests have demonstrated the city's water to be unfit for consumption. This is particularly the case with children, whose brains and bodies are developing, making them especially vulnerable to the poisonous impact of lead.

And yet, Flint's water pipes, treatment works and supply have not been fixed or effectively addressed. Instead of immediately switching the source back to Lake Huron water through Detroit, the city and state are taking baby steps--seemingly to buy time for a new water supply pipeline that will be completed next summer.

We don't think this is right. You probably don't either.

Because the situation is wrong and unacceptable, NRDC joined with local groups and the Michigan ACLU to demand emergency federal action under the Safe Drinking Water Act. If the City and State are not going to get the poison out of Flint's water, the federal government has authority to do so under emergency powers. Our group filed a petition with the U.S. Environmental Protection Agency last week to demand quick action.

We don't think anyone should be forced to drink dangerous water. Particularly, citizens of our great democracy should not have contaminated water delivered to their homes through the public water utility. Flint, Michigan is an American city; it was a manufacturing marvel that helped define the American Century with the production of cars and a strong, vibrant middle class; and, it happens to be a city in the center of the largest resource of fresh water in North America, the Great Lakes. Our fellow citizens deserve much, much better. There is strong moral responsibility to act and act quickly. The people of Flint should not drink lead-laced water for another day, let alone another year.

Hi Melissa --

I know that you sent an e-mail earlier this evening recommending against anyone doing an on camera interview with CBS and instead updating our statement -- perhaps supplementing the statement with a little background about our technical assistance role. I hope that accurately summarizes your e-mail (which seems to have vanished from my iPhone) and, if so, I completely agree with that approach. I think we should probably wait until the dust settles in the morning to update the statement -- and when that happens we will circulate it for comment.

Thanks -- and my best to you and the Administrator in Chicago!

Susan

Flint spokesman Jason Lorenz said City Administrator Natasha Henderson ordered the arrangement because the room where the committee was meeting in City Hall was too small to accommodate non-committee members.

The Technical Advisory Committee, which has about 30 members, has been dormant for months, but was singled out by state officials last month as being a key part of improving Flint's water quality moving forward.

High levels of lead in city water and in the blood of children and infants since the city changed its water source in April 2014 have triggered a public health emergency here, including the mass distribution of water filters.

Mayor Dayne Walling told The Flint Journal-MLive earlier this week when and where the committee meeting would be today and indicated it was open to the public.

But when citizens and journalists showed up before the meeting started at 2 p.m., they were turned away from the door by police.

As the meeting started, a door to the City Council meeting room was left open. Some reporters, including a Flint Journal reporter, were allowed inside only as chairs opened up -- about 25 minutes after the meeting started.

The committee is discussing issues including the potential for the city to return to purchasing Lake Huron water from the Detroit Water and Sewerage Department.

Formed in March by Walling and former emergency manager Jerry Ambrose, the advisory committee has met just twice, but it has grown to include an expert appointed to serve by the U.S. Environmental Protection Agency's Office of Research and Development.

In announcing an "action plan" for Flint water Friday, Oct. 2, state officials touted the committee's role in ensuring "the best technology, practices and science are being followed" going forward.

Experts say Flint should return to Detroit water

By STEVE CARMODY, Michigan Radio • 23 MINUTES AGO

A panel of experts is recommending the city of Flint return to Detroit's water system.

As protesters marched outside Flint city hall chanting “lead free water,” inside local, state and national health and water experts agreed that change is needed.

Since the city switched its drinking water source, from the Detroit Water and Sewerage Department to the Flint River in April 2014, there have been problems. At first, people complained about the taste, smell and appearance of their tap water. Eventually, the water system had problems with levels of E. coli and chemicals.

Finally, this summer, tests started showing serious levels of lead in the drinking water. State and local groups have been handing out water filters and bottled water in recent weeks to people too scared to drink from their own kitchen faucets.

“We must stay focused on the people part of the answer,” says Dr. Lawrence Reynolds, the president of Mott Children’s Health Center and a member of the expert panel.

Reynolds agreed with other committee members that Flint would be better off going back to Detroit water until a new water pipeline from Lake Huron is completed next year.

"I think we can feel that we've done it the right way," says Croft, referring to the process of reviewing the scientific evidence to support a switch.

Croft says it would take about two weeks to physically start up the pipeline to Detroit. However, the process will surely take longer.

Croft says the next step is in the mayor's and city administrator's hands.

Switching back to Detroit water won't be cheap. City officials estimate the cost at more than $1 million a month. City leaders say they'll need the state's help to pay the cost of switching back.

While the experts agreed switching back to Detroit water is the best option, they also agreed it's not a cure-all.

"There are risks with an older infrastructure," says Mayor Dayne Walling. "Even with a Detroit water source, even with corrosion control."

Researchers from Virginia Tech say the corrosive nature of the Flint River has done extensive damage to Flint's lead and iron pipes. Switching to a different water source will help lessen the presence of lead in the water, but it won't eliminate it.

Experts recommend Flint reconnect to Detroit water

By John Wisely, Detroit Free Press 5:19 p.m. EDT October 7, 2015

A panel of experts recommended this afternoon that Flint reconnect to Detroit's water system to improve the drinking water quality in a city plagued by elevated lead levels.

When a member of the committee asked whether anyone could think of a public health reason to maintain the current supply, which draws water from the Flint River, the room fell silent.

The recommendation echoes a request from Flint Mayor Dayne Walling, who has said reconnecting is the best way to address the public health issues created by lead in the water.

"It's estimated to cost $12 million over nine months," Walling said. "I've made a request to the governor to work with the Legislature to identify the funds."

Flint has been under state emergency financial management for several years and the money isn't in the budget, Walling said. In addition to finding the money, the city also must negotiate a contract with Detroit and with Genesee County, which owns the transmission lines that would carry the water from Detroit's main to Flint's water plant where it would be fed into the city's distribution system.

The committee's recommendation came after a raucous meeting in a small room on the third floor of Flint's City Hall. Members of the committee filled the room and the city stationed police at the door to keep the public outside the door, which was left open so people could listen.

The committee is an informal body made up of experts from the water industry, public health and other areas.

"It's just for committee members," city spokesman Jason Lorenz said.

More than a dozen residents waited outside, angry that they were not allowed inside. Two police officers guarded the door.

The council chamber, which seats several hundred people, remained empty.

Lorenz said the meeting could not be moved to the council chambers because the committee needed a table on which to conduct business.

http://www.huffingtonpost.com/henry-henderson/poisoning-people-the-futu_b_8254390.html

Poisoning People, the Future and the Public Interest in Flint, Michigan

Henry Henderson, Natural Resources Defense Council Midwest Program Director
Huffington Post

Lead is a devastating toxin. It ravages the brain. Robs children of IQ points and brain function. And deprives our society of vast potential. It has cast a huge, destructive shadow across human civilization.

That's why Americans eliminated it from paint. From gasoline. And have struggled mightily to ban it from toys. The continuing negative impact of lead remains in soil, homes and infrastructure exposed to lead in the past, before we were able to ban it from products.

And in Flint, Michigan, its concentration in the drinking water is shockingly high.

Pipes and taps in Flint have brought water replete with toxic lead into homes for some time since the cash-strapped city shifted water sources from Detroit's treated supply drawn from Lake Huron, and began to pull water out of the Flint River.

All water isn't the same everywhere. The water from the Flint River, as treated, is far more corrosive than the Lake Huron water that had previously coursed through the City's pipes and water infrastructure. As a result of the change to corrosive river water, the aging lead pipes released higher concentrations of lead into Flint's homes. Despite the urgently stated concerns raised by residents and presented to state and local officials, the people of Flint were told their water was safe. This amazing situation has gone on repeatedly over the past year and a half. During which more and more lead-contaminated water has gone into homes, drinking glasses, baby formula, and cooking water.

Put simply and starkly: the water being delivered to the people of Flint is not safe.

Independent tests have demonstrated the city's water to be unfit for consumption. This is particularly the case with children, whose brains and bodies are developing, making them especially vulnerable to the poisonous impact of lead.

And yet, Flint's water pipes, treatment works and supply have not been fixed or effectively addressed. Instead of immediately switching the source back to Lake Huron water through Detroit, the city and state are taking baby steps--seemingly to buy time for a new water supply pipeline that will be completed next summer.

We don't think this is right. You probably don't either.

Because the situation is wrong and unacceptable, NRDC joined with local groups and the Michigan ACLU to demand emergency federal action under the Safe Drinking Water Act. If the City and State are not going to get the poison out of Flint's water, the federal government has authority to do so under emergency powers. Our group filed a petition with the U.S. Environmental Protection Agency last week to demand quick action.

We don't think anyone should be forced to drink dangerous water. Particularly, citizens of our great democracy should not have contaminated water delivered to their homes through the public water utility. Flint, Michigan is an American city; it was a manufacturing marvel that helped define the American Century with the production of cars and a strong, vibrant middle class; and, it happens to be a city in the center of the largest resource of fresh water in North America, the Great Lakes. Our fellow citizens deserve much, much better. There is strong moral responsibility to act and act quickly. The people of Flint should not drink lead-laced water for another day, let alone another year.

Put Flint back on Detroit water ASAP, expert panel tells mayor, governor

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 07, 2015 at 5:42 PM

FLINT, MI -- The city should end its use of the Flint River as a water source, a blue ribbon advisory committee recommended Wednesday, Oct. 7.

Flint's Technical Advisory Committee, appointed earlier this year to make recommendations aimed at improving the safety and quality of Flint water, did not vote.

But there was no doubt about the sentiments of the group, which includes experts in water science, health and engineering.

"We need to switch to a different water source, and right now. The quickest way to do that is (the Detroit Water and Sewerage Department)," said Dr. Lawrence Reynolds, president and chief executive officer of Mott Children's Health Center. "We can't stay in the spot we are in right now."

Flint Department of Public Works Director Howard Croft, who ran Wednesday's meeting, said he was comfortable reporting -- without a vote -- that the "Technical Advisory Committee is recommending going to the DWSD."

The committee's recommendation comes after the declaration of a health emergency because of rising lead levels in Flint water and in children's blood.

More than 16 months after the city's bold switch from buying Lake Huron water from Detroit to using the Flint River for water, almost every key official and representative of major institutions in the city have declared the experiment a mistake.

Last week, Gov. Rick Snyder announced an action plan for improving Flint water, including $1 million for lead-clearing faucet filters, but stopped short of committing state funds to help reconnect Flint to Detroit water.

State officials said they would monitor the recommendations from the Technical Advisory Committee, which includes representatives of the state Department of Environmental Quality and Dr. Eden Wells, chief medical executive for the Michigan Department of Health & Human Services.

"We continue to work with Flint city and community leaders about potential next steps," said Dave Murray, spokesman for Gov. Rick Snyder's office, in response to the committee's recommendation Wednesday.

Virginia Tech university professor Marc Edwards said Wednesday that a change to Detroit water should result in a "dramatic reduction" of lead within a month.

Flint police block some media, public from water advisory meeting

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 07, 2015 at 4:08 PM, updated October 07, 2015 at 4:18 PM

FLINT, MI -- City police blocked the door outside the meeting room of a committee of water experts today, Oct. 7, leaving some news reporters and the public outside.

Flint spokesman Jason Lorenz said City Administrator Natasha Henderson ordered the arrangement because the room where the committee was meeting in City Hall was too small to accommodate non-committee members.

The Technical Advisory Committee, which has about 30 members, has been dormant for months, but was singled out by state officials last month as being a key part of improving Flint's water quality moving forward.

High levels of lead in city water and in the blood of children and infants since the city changed its water source in April 2014 have triggered a public health emergency here, including the mass distribution of water filters.

Mayor Dayne Walling told The Flint Journal-MLive earlier this week when and where the committee meeting would be today and indicated it was open to the public.

But when citizens and journalists showed up before the meeting started at 2 p.m., they were turned away from the door by police.

Experts say Flint should return to Detroit water

By STEVE CARMODY, Michigan Radio • 23 MINUTES AGO

A panel of experts is recommending the city of Flint return to Detroit's water system.

As protesters marched outside Flint city hall chanting “lead free water,” inside local, state and national health and water experts agreed that change is needed.

Since the city switched its drinking water source, from the Detroit Water and Sewerage Department to the Flint River in April 2014, there have been problems. At first, people complained about the taste, smell and appearance of their tap water. Eventually, the water system had problems with levels of E. coli and chemicals.

Finally, this summer, tests started showing serious levels of lead in the drinking water. State and local groups have been handing out water filters and bottled water in recent weeks to people too scared to drink from their own kitchen faucets.

“We must stay focused on the people part of the answer,” says Dr. Lawrence Reynolds, the president of Mott Children’s Health Center and a member of the expert panel.

Reynolds agreed with other committee members that Flint would be better off going back to Detroit water until a new water pipeline from Lake Huron is completed next year.

“I think we can feel that we’ve done it the right way,” says Croft, referring to the process of reviewing the scientific evidence to support a switch.

Croft says it would take about two weeks to physically start up the pipeline to Detroit. However, the process will surely take longer.

Croft says the next step is in the mayor's and city administrator's hands.

Switching back to Detroit water won't be cheap. City officials estimate the cost at more than $1 million a month. City leaders say they'll need the state's help to pay the cost of switching back.

While the experts agreed switching back to Detroit water is the best option, they also agreed it's not a cure-all.

"There are risks with an older infrastructure," says Mayor Dayne Walling. "Even with a Detroit water source, even with corrosion control."

Researchers from Virginia Tech say the corrosive nature of the Flint River has done extensive damage to Flint's lead and iron pipes. Switching to a different water source will help lessen the presence of lead in the water, but it won't eliminate it.

Experts recommend Flint reconnect to Detroit water

By John Wisely, Detroit Free Press 5:19 p.m. EDT October 7, 2015

A panel of experts recommended this afternoon that Flint reconnect to Detroit's water system to improve the drinking water quality in a city plagued by elevated lead levels.

When a member of the committee asked whether anyone could think of a public health reason to maintain the current supply, which draws water from the Flint River, the room fell silent.

The recommendation echoes a request from Flint Mayor Dayne Walling, who has said reconnecting is the best way to address the public health issues created by lead in the water.

"It's estimated to cost $12 million over nine months," Walling said. "I've made a request to the governor to work with the Legislature to identify the funds."

Flint has been under state emergency financial management for several years and the money isn't in the budget, Walling said. In addition to finding the money, the city also must negotiate a contract with Detroit and with Genesee County, which owns the transmission lines that would carry the water from Detroit's main to Flint's water plant where it would be fed into the city's distribution system.

The committee's recommendation came after a raucous meeting in a small room on the third floor of Flint's City Hall. Members of the committee filled the room and the city stationed police at the door to keep the public outside the door, which was left open so people could listen.

The committee is an informal body made up of experts from the water industry, public health and other areas.

"It's just for committee members," city spokesman Jason Lorenz said.

More than a dozen residents waited outside, angry that they were not allowed inside. Two police officers guarded the door.

The council chamber, which seats several hundred people, remained empty.

Lorenz said the meeting could not be moved to the council chambers because the committee needed a table on which to conduct business.

Poisoning People, the Future and the Public Interest in Flint, Michigan

Henry Henderson, Natural Resources Defense Council Midwest Program Director
Huffington Post

Lead is a devastating toxin. It ravages the brain. Robs children of IQ points and brain function. And deprives our society of vast potential. It has cast a huge, destructive shadow across human civilization.

That's why Americans eliminated it from paint. From gasoline. And have struggled mightily to ban it from toys. The continuing negative impact of lead remains in soil, homes and infrastructure exposed to lead in the past, before we were able to ban it from products.

And in Flint, Michigan, its concentration in the drinking water is shockingly high.

Pipes and taps in Flint have brought water replete with toxic lead into homes for some time since the cash-strapped city shifted water sources from Detroit's treated supply drawn from Lake Huron, and began to pull water out of the Flint River.

All water isn't the same everywhere. The water from the Flint River, as treated, is far more corrosive than the Lake Huron water that had previously coursed through the City's pipes and water infrastructure. As a result of the change to corrosive river water, the aging lead pipes released higher concentrations of lead into Flint's homes. Despite the urgently stated concerns raised by residents and presented to state and local officials, the people of Flint were told their water was safe. This amazing situation has gone on repeatedly over the past year and a half. During which more and more lead-contaminated water has gone into homes, drinking glasses, baby formula, and cooking water.

Put simply and starkly: the water being delivered to the people of Flint is not safe.

Independent tests have demonstrated the city's water to be unfit for consumption. This is particularly the case with children, whose brains and bodies are developing, making them especially vulnerable to the poisonous impact of lead.

And yet, Flint's water pipes, treatment works and supply have not been fixed or effectively addressed. Instead of immediately switching the source back to Lake Huron water through Detroit, the city and state are taking baby steps--seemingly to buy time for a new water supply pipeline that will be completed next summer.

We don't think this is right. You probably don't either.

Because the situation is wrong and unacceptable, NRDC joined with local groups and the Michigan ACLU to demand emergency federal action under the Safe Drinking Water Act. If the City and State are not going to get the poison out of Flint's water, the federal government has authority to do so under emergency powers. Our group filed a petition with the U.S. Environmental Protection Agency last week to demand quick action.

We don't think anyone should be forced to drink dangerous water. Particularly, citizens of our great democracy should not have contaminated water delivered to their homes through the public water utility. Flint, Michigan is an American city; it was a manufacturing marvel that helped define the American Century with the production of cars and a strong, vibrant middle class; and, it happens to be a city in the center of the largest resource of fresh water in North America, the Great Lakes. Our fellow citizens deserve much, much better. There is strong moral responsibility to act and act quickly. The people of Flint should not drink lead-laced water for another day, let alone another year.

Put Flint back on Detroit water ASAP, expert panel tells mayor, governor

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 07, 2015 at 5:42 PM

FLINT, MI -- The city should end its use of the Flint River as a water source, a blue ribbon advisory committee recommended Wednesday, Oct. 7.

Flint's Technical Advisory Committee, appointed earlier this year to make recommendations aimed at improving the safety and quality of Flint water, did not vote.

But there was no doubt about the sentiments of the group, which includes experts in water science, health and engineering.

"We need to switch to a different water source, and right now. The quickest way to do that is (the Detroit Water and Sewerage Department)," said Dr. Lawrence Reynolds, president and chief executive officer of Mott Children's Health Center. "We can't stay in the spot we are in right now."

Flint Department of Public Works Director Howard Croft, who ran Wednesday's meeting, said he was comfortable reporting -- without a vote -- that the "Technical Advisory Committee is recommending going to the DWSD."

The committee's recommendation comes after the declaration of a health emergency because of rising lead levels in Flint water and in children's blood.

More than 16 months after the city's bold switch from buying Lake Huron water from Detroit to using the Flint River for water, almost every key official and representative of major institutions in the city have declared the experiment a mistake.

Last week, Gov. Rick Snyder announced an action plan for improving Flint water, including $1 million for lead-clearing faucet filters, but stopped short of committing state funds to help reconnect Flint to Detroit water.

State officials said they would monitor the recommendations from the Technical Advisory Committee, which includes representatives of the state Department of Environmental Quality and Dr. Eden Wells, chief medical executive for the Michigan Department of Health & Human Services.

"We continue to work with Flint city and community leaders about potential next steps," said Dave Murray, spokesman for Gov. Rick Snyder's office, in response to the committee's recommendation Wednesday.

Virginia Tech university professor Marc Edwards said Wednesday that a change to Detroit water should result in a "dramatic reduction" of lead within a month.

Flint police block some media, public from water advisory meeting

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 07, 2015 at 4:08 PM, updated October 07, 2015 at 4:18 PM

FLINT, MI -- City police blocked the door outside the meeting room of a committee of water experts today, Oct. 7, leaving some news reporters and the public outside.

Flint spokesman Jason Lorenz said City Administrator Natasha Henderson ordered the arrangement because the room where the committee was meeting in City Hall was too small to accommodate non-committee members.

The Technical Advisory Committee, which has about 30 members, has been dormant for months, but was singled out by state officials last month as being a key part of improving Flint's water quality moving forward.

High levels of lead in city water and in the blood of children and infants since the city changed its water source in April 2014 have triggered a public health emergency here, including the mass distribution of water filters.

Mayor Dayne Walling told The Flint Journal-MLive earlier this week when and where the committee meeting would be today and indicated it was open to the public.

But when citizens and journalists showed up before the meeting started at 2 p.m., they were turned away from the door by police.

As the meeting started, a door to the City Council meeting room was left open. Some reporters, including a Flint Journal reporter, were allowed inside only as chairs opened up -- about 25 minutes after the meeting started.

The committee is discussing issues including the potential for the city to return to purchasing Lake Huron water from the Detroit Water and Sewerage Department.

Formed in March by Walling and former emergency manager Jerry Ambrose, the advisory committee has met just twice, but it has grown to include an expert appointed to serve by the U.S. Environmental Protection Agency's Office of Research and Development.

In announcing an "action plan" for Flint water Friday, Oct. 2, state officials touted the committee's role in ensuring "the best technology, practices and science are being followed" going forward.

That's why Americans eliminated it from paint. From gasoline. And have struggled mightily to ban it from toys. The continuing negative impact of lead remains in soil, homes and infrastructure exposed to lead in the past, before we were able to ban it from products.

And in Flint, Michigan, its concentration in the drinking water is shockingly high.

Pipes and taps in Flint have brought water replete with toxic lead into homes for some time since the cash-strapped city shifted water sources from Detroit's treated supply drawn from Lake Huron, and began to pull water out of the Flint River.

All water isn't the same everywhere. The water from the Flint River, as treated, is far more corrosive than the Lake Huron water that had previously coursed through the City's pipes and water infrastructure. As a result of the change to corrosive river water, the aging lead pipes released higher concentrations of lead into Flint's homes. Despite the urgently stated concerns raised by residents and presented to state and local officials, the people of Flint were told their water was safe. This amazing situation has gone on repeatedly over the past year and a half. During which more and more lead-contaminated water has gone into homes, drinking glasses, baby formula, and cooking water.

Put simply and starkly: the water being delivered to the people of Flint is not safe.

Independent tests have demonstrated the city's water to be unfit for consumption. This is particularly the case with children, whose brains and bodies are developing, making them especially vulnerable to the poisonous impact of lead.

And yet, Flint's water pipes, treatment works and supply have not been fixed or effectively addressed. Instead of immediately switching the source back to Lake Huron water through Detroit, the city and state are taking baby steps--seemingly to buy time for a new water supply pipeline that will be completed next summer.

We don't think this is right. You probably don't either.

Because the situation is wrong and unacceptable, NRDC joined with local groups and the Michigan ACLU to demand emergency federal action under the Safe Drinking Water Act. If the City and State are not going to get the poison out of Flint's water, the federal government has authority to do so under emergency powers. Our group filed a petition with the U.S. Environmental Protection Agency last week to demand quick action.

We don't think anyone should be forced to drink dangerous water. Particularly, citizens of our great democracy should not have contaminated water delivered to their homes through the public water utility. Flint, Michigan is an American city; it was a manufacturing marvel that helped define the American Century with the production of cars and a strong, vibrant middle class; and, it happens to be a city in the center of the largest resource of fresh water in North America, the Great Lakes. Our fellow citizens deserve much, much better. There is strong moral responsibility to act and act quickly. The people of Flint should not drink lead-laced water for another day, let alone another year.

Please see e-mail chain below -- I think the Gov is likely to be announcing funding for a return to Detroit water. Will confirm as soon as it happens. Please give the Administrator a heads up. Thanks for all your help with this.

Put Flint back on Detroit water ASAP, expert panel tells mayor, governor

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 07, 2015 at 5:42 PM

FLINT, MI -- The city should end its use of the Flint River as a water source, a blue ribbon advisory committee recommended Wednesday, Oct. 7.

Flint's Technical Advisory Committee, appointed earlier this year to make recommendations aimed at improving the safety and quality of Flint water, did not vote.

But there was no doubt about the sentiments of the group, which includes experts in water science, health and engineering.

"We need to switch to a different water source, and right now. The quickest way to do that is (the Detroit Water and Sewerage Department)," said Dr. Lawrence Reynolds, president and chief executive officer of Mott Children's Health Center. "We can't stay in the spot we are in right now."

Flint Department of Public Works Director Howard Croft, who ran Wednesday's meeting, said he was comfortable reporting -- without a vote -- that the "Technical Advisory Committee is recommending going to the DWSD."

The committee's recommendation comes after the declaration of a health emergency because of rising lead levels in Flint water and in children's blood.

More than 16 months after the city's bold switch from buying Lake Huron water from Detroit to using the Flint River for water, almost every key official and representative of major institutions in the city have declared the experiment a mistake.

Last week, Gov. Rick Snyder announced an action plan for improving Flint water, including $1 million for lead-clearing faucet filters, but stopped short of committing state funds to help reconnect Flint to Detroit water.

State officials said they would monitor the recommendations from the Technical Advisory Committee, which includes representatives of the state Department of Environmental Quality and Dr. Eden Wells, chief medical executive for the Michigan Department of Health & Human Services.

"We continue to work with Flint city and community leaders about potential next steps," said Dave Murray, spokesman for Gov. Rick Snyder's office, in response to the committee's recommendation Wednesday.

Virginia Tech university professor Marc Edwards said Wednesday that a change to Detroit water should result in a "dramatic reduction" of lead within a month.

Flint police block some media, public from water advisory meeting

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 07, 2015 at 4:08 PM, updated October 07, 2015 at 4:18 PM

FLINT, MI -- City police blocked the door outside the meeting room of a committee of water experts today, Oct. 7, leaving some news reporters and the public outside.

Flint spokesman Jason Lorenz said City Administrator Natasha Henderson ordered the arrangement because the room where the committee was meeting in City Hall was too small to accommodate non-committee members.

The Technical Advisory Committee, which has about 30 members, has been dormant for months, but was singled out by state officials last month as being a key part of improving Flint's water quality moving forward.

High levels of lead in city water and in the blood of children and infants since the city changed its water source in April 2014 have triggered a public health emergency here, including the mass distribution of water filters.

Mayor Dayne Walling told The Flint Journal-MLive earlier this week when and where the committee meeting would be today and indicated it was open to the public.

But when citizens and journalists showed up before the meeting started at 2 p.m., they were turned away from the door by police.

As the meeting started, a door to the City Council meeting room was left open. Some reporters, including a Flint Journal reporter, were allowed inside only as chairs opened up -- about 25 minutes after the meeting started.

The committee is discussing issues including the potential for the city to return to purchasing Lake Huron water from the Detroit Water and Sewerage Department.

Formed in March by Walling and former emergency manager Jerry Ambrose, the advisory committee has met just twice, but it has grown to include an expert appointed to serve by the U.S. Environmental Protection Agency's Office of Research and Development.

In announcing an "action plan" for Flint water Friday, Oct. 2, state officials touted the committee's role in ensuring "the best technology, practices and science are being followed" going forward.

Experts say Flint should return to Detroit water

By STEVE CARMODY, Michigan Radio • 23 MINUTES AGO

A panel of experts is recommending the city of Flint return to Detroit's water system.

As protesters marched outside Flint city hall chanting “lead free water,” inside local, state and national health and water experts agreed that change is needed.

Since the city switched its drinking water source, from the Detroit Water and Sewerage Department to the Flint River in April 2014, there have been problems. At first, people complained about the taste, smell and appearance of their tap water. Eventually, the water system had problems with levels of E. coli and chemicals.

Finally, this summer, tests started showing serious levels of lead in the drinking water. State and local groups have been handing out water filters and bottled water in recent weeks to people too scared to drink from their own kitchen faucets.

“We must stay focused on the people part of the answer,” says Dr. Lawrence Reynolds, the president of Mott Children’s Health Center and a member of the expert panel.

Reynolds agreed with other committee members that Flint would be better off going back to Detroit water until a new water pipeline from Lake Huron is completed next year.

“I think we can feel that we’ve done it the right way,” says Croft, referring to the process of reviewing the scientific evidence to support a switch.

Croft says it would take about two weeks to physically start up the pipeline to Detroit. However, the process will surely take longer.

Croft says the next step is in the mayor’s and city administrator’s hands.

Switching back to Detroit water won’t be cheap. City officials estimate the cost at more than $1 million a month. City leaders say they’ll need the state’s help to pay the cost of switching back.

While the experts agreed switching back to Detroit water is the best option, they also agreed it’s not a cure-all.

“There are risks with an older infrastructure,” says Mayor Dayne Walling. “Even with a Detroit water source, even with corrosion control.”

Researchers from Virginia Tech say the corrosive nature of the Flint River has done extensive damage to Flint’s lead and iron pipes. Switching to a different water source will help lessen the presence of lead in the water, but it won’t eliminate it.

Experts recommend Flint reconnect to Detroit water

By John Wisely, Detroit Free Press 5:19 p.m. EDT October 7, 2015

A panel of experts recommended this afternoon that Flint reconnect to Detroit's water system to improve the drinking water quality in a city plagued by elevated lead levels.

When a member of the committee asked whether anyone could think of a public health reason to maintain the current supply, which draws water from the Flint River, the room fell silent.

The recommendation echoes a request from Flint Mayor Dayne Walling, who has said reconnecting is the best way to address the public health issues created by lead in the water.

"It's estimated to cost $12 million over nine months," Walling said. "I've made a request to the governor to work with the Legislature to identify the funds."

Flint has been under state emergency financial management for several years and the money isn't in the budget, Walling said. In addition to finding the money, the city also must negotiate a contract with Detroit and with Genesee County, which owns the transmission lines that would carry the water from Detroit's main to Flint's water plant where it would be fed into the city's distribution system.

The committee's recommendation came after a raucous meeting in a small room on the third floor of Flint's City Hall. Members of the committee filled the room and the city stationed police at the door to keep the public outside the door, which was left open so people could listen.

The committee is an informal body made up of experts from the water industry, public health and other areas.

"It's just for committee members," city spokesman Jason Lorenz said.

More than a dozen residents waited outside, angry that they were not allowed inside. Two police officers guarded the door.

The council chamber, which seats several hundred people, remained empty.

Lorenz said the meeting could not be moved to the council chambers because the committee needed a table on which to conduct business.

Hi Melissa --

I know that you sent an e-mail earlier this evening recommending against anyone doing an on camera interview with CBS and instead updating our statement -- perhaps supplementing the statement with a little background about our technical assistance role. I hope that accurately summarizes your e-mail (which seems to have vanished from my iPhone) and, if so, I completely agree with that approach. I think we should probably wait until the dust settles in the morning to update the statement -- and when that happens we will circulate it for comment.

Thanks -- and my best to you and the Administrator in Chicago!

Susan

According to the latest round of clips, it appears that the Flint Public Works Director is interpreting today's discussion by the Technical Advisory Committee as a recommendation to return to Detroit water -- though no vote was taken.

Put Flint back on Detroit water ASAP, expert panel tells mayor, governor

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 07, 2015 at 5:42 PM

FLINT, MI -- The city should end its use of the Flint River as a water source, a blue ribbon advisory committee recommended Wednesday, Oct. 7.

Flint's Technical Advisory Committee, appointed earlier this year to make recommendations aimed at improving the safety and quality of Flint water, did not vote.

But there was no doubt about the sentiments of the group, which includes experts in water science, health and engineering.

"We need to switch to a different water source, and right now. The quickest way to do that is (the Detroit Water and Sewerage Department)," said Dr. Lawrence Reynolds, president and chief executive officer of Mott Children's Health Center. "We can't stay in the spot we are in right now."

Flint Department of Public Works Director Howard Croft, who ran Wednesday's meeting, said he was comfortable reporting -- without a vote -- that the "Technical Advisory Committee is recommending going to the DWSD."

The committee's recommendation comes after the declaration of a health emergency because of rising lead levels in Flint water and in children's blood.

More than 16 months after the city's bold switch from buying Lake Huron water from Detroit to using the Flint River for water, almost every key official and representative of major institutions in the city have declared the experiment a mistake.

Last week, Gov. Rick Snyder announced an action plan for improving Flint water, including $1 million for lead-clearing faucet filters, but stopped short of committing state funds to help reconnect Flint to Detroit water.

State officials said they would monitor the recommendations from the Technical Advisory Committee, which includes representatives of the state Department of Environmental Quality and Dr. Eden Wells, chief medical executive for the Michigan Department of Health & Human Services.

"We continue to work with Flint city and community leaders about potential next steps," said Dave Murray, spokesman for Gov. Rick Snyder's office, in response to the committee's recommendation Wednesday.

Virginia Tech university professor Marc Edwards said Wednesday that a change to Detroit water should result in a "dramatic reduction" of lead within a month.

Flint police block some media, public from water advisory meeting

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 07, 2015 at 4:08 PM, updated October 07, 2015 at 4:18 PM

FLINT, MI -- City police blocked the door outside the meeting room of a committee of water experts today, Oct. 7, leaving some news reporters and the public outside.

Flint spokesman Jason Lorenz said City Administrator Natasha Henderson ordered the arrangement because the room where the committee was meeting in City Hall was too small to accommodate non-committee members.

The Technical Advisory Committee, which has about 30 members, has been dormant for months, but was singled out by state officials last month as being a key part of improving Flint's water quality moving forward.

High levels of lead in city water and in the blood of children and infants since the city changed its water source in April 2014 have triggered a public health emergency here, including the mass distribution of water filters.

Mayor Dayne Walling told The Flint Journal-MLive earlier this week when and where the committee meeting would be today and indicated it was open to the public.

But when citizens and journalists showed up before the meeting started at 2 p.m., they were turned away from the door by police.

As the meeting started, a door to the City Council meeting room was left open. Some reporters, including a Flint Journal reporter, were allowed inside only as chairs opened up -- about 25 minutes after the meeting started.

The committee is discussing issues including the potential for the city to return to purchasing Lake Huron water from the Detroit Water and Sewerage Department.

Formed in March by Walling and former emergency manager Jerry Ambrose, the advisory committee has met just twice, but it has grown to include an expert appointed to serve by the U.S. Environmental Protection Agency's Office of Research and Development.

In announcing an "action plan" for Flint water Friday, Oct. 2, state officials touted the committee's role in ensuring "the best technology, practices and science are being followed" going forward.

Experts say Flint should return to Detroit water

By STEVE CARMODY, Michigan Radio • 23 MINUTES AGO

A panel of experts is recommending the city of Flint return to Detroit's water system.

As protesters marched outside Flint city hall chanting “lead free water,” inside local, state and national health and water experts agreed that change is needed.

Since the city switched its drinking water source, from the Detroit Water and Sewerage Department to the Flint River in April 2014, there have been problems. At first, people complained about the taste, smell and appearance of their tap water. Eventually, the water system had problems with levels of E. coli and chemicals.

Finally, this summer, tests started showing serious levels of lead in the drinking water. State and local groups have been handing out water filters and bottled water in recent weeks to people too scared to drink from their own kitchen faucets.

“We must stay focused on the people part of the answer,” says Dr. Lawrence Reynolds, the president of Mott Children’s Health Center and a member of the expert panel.

Reynolds agreed with other committee members that Flint would be better off going back to Detroit water until a new water pipeline from Lake Huron is completed next year.

“I think we can feel that we’ve done it the right way,” says Croft, referring to the process of reviewing the scientific evidence to support a switch.

Croft says it would take about two weeks to physically start up the pipeline to Detroit. However, the process will surely take longer.

Croft says the next step is in the mayor’s and city administrator’s hands.

Switching back to Detroit water won’t be cheap. City officials estimate the cost at more than $1 million a month. City leaders say they’ll need the state’s help to pay the cost of switching back.

While the experts agreed switching back to Detroit water is the best option, they also agreed it’s not a cure-all.

“There are risks with an older infrastructure,” says Mayor Dayne Walling. “Even with a Detroit water source, even with corrosion control.”

Researchers from Virginia Tech say the corrosive nature of the Flint River has done extensive damage to Flint's lead and iron pipes. Switching to a different water source will help lessen the presence of lead in the water, but it won't eliminate it.

Experts recommend Flint reconnect to Detroit water

By John Wisely, Detroit Free Press 5:19 p.m. EDT October 7, 2015

A panel of experts recommended this afternoon that Flint reconnect to Detroit's water system to improve the drinking water quality in a city plagued by elevated lead levels.

When a member of the committee asked whether anyone could think of a public health reason to maintain the current supply, which draws water from the Flint River, the room fell silent.

The recommendation echoes a request from Flint Mayor Dayne Walling, who has said reconnecting is the best way to address the public health issues created by lead in the water.

"It's estimated to cost $12 million over nine months," Walling said. "I've made a request to the governor to work with the Legislature to identify the funds."

Flint has been under state emergency financial management for several years and the money isn't in the budget, Walling said. In addition to finding the money, the city also must negotiate a contract with Detroit and with Genesee County, which owns the transmission lines that would carry the water from Detroit's main to Flint's water plant where it would be fed into the city's distribution system.

The committee's recommendation came after a raucous meeting in a small room on the third floor of Flint's City Hall. Members of the committee filled the room and the city stationed police at the door to keep the public outside the door, which was left open so people could listen.

The committee is an informal body made up of experts from the water industry, public health and other areas.

"It's just for committee members," city spokesman Jason Lorenz said.

More than a dozen residents waited outside, angry that they were not allowed inside. Two police officers guarded the door.

The council chamber, which seats several hundred people, remained empty.

Lorenz said the meeting could not be moved to the council chambers because the committee needed a table on which to conduct business.

Poisoning People, the Future and the Public Interest in Flint, Michigan

Henry Henderson, Natural Resources Defense Council Midwest Program Director
Huffington Post

Lead is a devastating toxin. It ravages the brain. Robs children of IQ points and brain function. And deprives our society of vast potential. It has cast a huge, destructive shadow across human civilization.

That's why Americans eliminated it from paint. From gasoline. And have struggled mightily to ban it from toys. The continuing negative impact of lead remains in soil, homes and infrastructure exposed to lead in the past, before we were able to ban it from products.

And in Flint, Michigan, its concentration in the drinking water is shockingly high.

Pipes and taps in Flint have brought water replete with toxic lead into homes for some time since the cash-strapped city shifted water sources from Detroit's treated supply drawn from Lake Huron, and began to pull water out of the Flint River.

All water isn't the same everywhere. The water from the Flint River, as treated, is far more corrosive than the Lake Huron water that had previously coursed through the City's pipes and water infrastructure. As a result of the change to corrosive river water, the aging lead pipes released higher concentrations of lead into Flint's homes. Despite the urgently stated concerns raised by residents and presented to state and local officials, the people of Flint were told their water was safe. This amazing situation has gone on repeatedly over the past year and a half. During which more and more lead-contaminated water has gone into homes, drinking glasses, baby formula, and cooking water.

Put simply and starkly: the water being delivered to the people of Flint is not safe.

Independent tests have demonstrated the city's water to be unfit for consumption. This is particularly the case with children, whose brains and bodies are developing, making them especially vulnerable to the poisonous impact of lead.

And yet, Flint's water pipes, treatment works and supply have not been fixed or effectively addressed. Instead of immediately switching the source back to Lake Huron water through Detroit, the city and state are taking baby steps--seemingly to buy time for a new water supply pipeline that will be completed next summer.

We don't think this is right. You probably don't either.

Because the situation is wrong and unacceptable, NRDC joined with local groups and the Michigan ACLU to demand emergency federal action under the Safe Drinking Water Act. If the City and State are not going to get the poison out of Flint's water, the federal government has authority to do so under emergency powers. Our group filed a petition with the U.S. Environmental Protection Agency last week to demand quick action.

We don't think anyone should be forced to drink dangerous water. Particularly, citizens of our great democracy should not have contaminated water delivered to their homes through the public water utility. Flint, Michigan is an American city; it was a manufacturing marvel that helped define the American Century with the production of cars and a strong, vibrant middle class; and, it happens to be a city in the center of the largest resource of fresh water in North America, the Great Lakes. Our fellow citizens deserve much, much better. There is strong moral responsibility to act and act quickly. The people of Flint should not drink lead-laced water for another day, let alone another year.

Gov. Snyder says he'll make announcement on Flint water Thursday

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 07, 2015 at 9:45 PM, updated October 08, 2015 at 8:08 AM

FLINT, MI -- Gov. Rick Snyder says on Twitter that he will make an announcement about Flint water at 10 a.m. Thursday.

The planned announcement comes less than 24 hours after Flint's Technical Advisory Committee recommended the city end its use of the Flint River as its water source.

Since making the switch from using pre-treated Lake Huron water from the city of Detroit to treating river water at its own plant in April 2014, Flint officials have struggled to maintain the quality and safety of water delivered to city residents.

Snyder's Twitter message says, "Watch live tomorrow at 10 a.m. as I make an announcement regarding Flint water" at mi.gov/SnyderLive.

The state's Web site says the governor will be joined by Flint Mayor Dayne Walling, other state officials, and Ridgway White of the Charles Stewart Mott Foundation.

High levels of lead in city water and in the blood of children and infants since the city changed its water source have triggered a public health emergency here, including the mass distribution of lead-clearing faucet filters and bottled water.

Researchers from Virginia Tech university say river water has proven to be far more corrosive than water from the Detroit Water and Sewerage Department, causing lead to leach into homes that have lead service lines.

Flint City Administrator Natasha Henderson said today, Oct. 7, that she believes the position of state officials has been shifting on continued use of the Flint River, a change that was made while Flint was being run by a state-appointed emergency manager.

"We're to the point that the state believes this is a public health emergency," Henderson told the City Council. "From what I see, the state is working very well with us."

The city administrator is among officials who have advocated for a return to buying water from the DWSD since a study was released last month by Hurley Medical Center's director of pediatric residency program.

The study showed the percentage of Flint infants and children with above average lead levels has nearly doubled citywide since the switch to river water, and has nearly tripled among children in "high risk" areas of lead exposure.

http://www.macombdaily.com/general-news/20151008/governor-plans-10-am-announcement-on-troubled-flint-water-system

Governor plans 10 a.m. announcement on troubled Flint water system

FLINT (AP) — Gov. Rick Snyder plans an announcement about the water system in Flint, which is facing a public health emergency over lead in its water.

A posting on the state’s website says Snyder on Thursday morning will be joined for the announcement by officials including Flint Mayor Dayne Walling, state Department of Environmental Quality Director Dan Wyant and state Department of Health and Human Services Director Nick Lyon.

The announcement comes a day after a committee of local experts in health, water and science recommended Flint reconnect to Detroit’s water system while it awaits a new pipeline to Lake Huron.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. State government and nonprofit groups are distributing filters and bottled water to Flint homes and schools.

Snyder's announcement can be viewed live at 10 a.m. Thursday, Oct. 8 by visiting http://1.usa.gov/1QapVxk

http://www.nytimes.com/2015/10/08/us/reassurances-end-in-flint-after-months-of-concern.html

Flint Officials Are No Longer Saying the Water Is Fine

By MONICA DAVEY, New York Times, OCT. 7, 2015

FLINT, Mich. — All along, through months of complaints from residents of this city about the peculiar colors and odors they said were coming from their faucets, the overriding message from the authorities here was that the water would be just fine.

Yes, there had been a boil order when fecal coliform bacteria turned up in some neighborhoods last year. And yes, the extra chlorine that was pumped in to solve that problem seemed to create another one — increased levels of a different contaminant.

Still, the guidance from Flint officials about the temporary water supply they switched to in 2014 — partly to save money — sounded assuring. In a notice sent to residents in July, city officials declared: "This is not an emergency. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours."

The soothing talk has vanished. In recent weeks, testing has shown increased levels of lead in the blood of some Flint children — and health officials pointed to the water as a possible source.

First, the city advised residents to run their water for five minutes before using it, to use only cold water for drinking and cooking, and to install lead-removing water filters. Then county officials issued an emergency advisory recommending that people not drink Flint's water unless it is tested for lead or filtered.

And last Friday, after corroborating that lead levels had risen in some children, state officials called for the water to be tested at all Flint public schools and for stepped-up efforts to replace lead service lines; they also promised $1 million to provide filters.

Officials met here on Wednesday afternoon, and talks were underway, officials said, for additional solutions that could come as early as Thursday. Gov. Rick Snyder said on Twitter late Wednesday that he planned to make an announcement about the situation on Thursday morning.

Private groups have raced to donate bottled water to schools, where the water fountains are now shut off, as well as filters to families who cannot afford them. Saying "we're just in a heck of a bind," Robert J. Pickell, the Genesee County sheriff, began serving bottled water and food that need not be cooked in water to hundreds of inmates in the county jail. Some residents have begun washing their children and pets with bottled water.

And Flint's mayor, Dayne Walling, who had attended a 2014 event to celebrate the switch to the new water supply, called for returning to the city's old water supply and urged state officials to provide millions of dollars to help pay for it.

The contaminated water was just the latest blow to Flint, an economically battered city that has struggled for years with factory closings, job losses and population decline.

Along Saginaw Street downtown, where at least one business had an “un-leaded” sign posted by a jug of water, residents had lingering questions: Would filters really do enough to make the water safe? What about unfiltered showers? Could they rely on the water at work and at restaurants? And why had it taken so long for leaders to figure out that there was a problem?

“I don’t think people know what’s going on at all,” said Chris Thornton, 49, who described the first blast of water from his faucets some days as looking like urine, smelling like bleach and tasting of metal. After his wife, Ronda, 50, felt sick to her stomach for months, the Thorntons began buying jugs of bottled water, though the price — on top of an already steep water bill — has been overwhelming.

“As far as my family,” Ronda Thornton said, “we’ve just given up on the city’s water.”

Flint’s water problems are tied inextricably to its fiscal woes. In 1960, nearly 200,000 people lived here. But auto plants closed, and the population has dropped by half. By 2011, Flint’s shrunken tax base and seemingly intractable budget problems prompted Mr. Snyder to appoint an emergency manager for the city. Over the next four years, the city had four managers overseeing operations. Along the way, the city switched its water supply.

For decades, the city bought water from Detroit, which treated water from Lake Huron, then piped it here, 70 miles to the northwest. But with the costs mounting, Flint’s leaders decided they could save millions by joining a new regional authority that would draw and treat its own water from Lake Huron.

There was one complication: Flint needed an alternative water supply from April 2014 until the new regional system is ready, probably next year. In the interim, Flint switched to using water from the Flint River, which state officials say had been a backup source in the past.

Ask residents about the Flint River, and many of them roll their eyes. They say it was once as a dumping ground for car parts, grocery carts and refrigerators. There have been significant improvements and intensive restoration campaigns in recent years, though a Flint River Fest set for Friday has been postponed, organizers said, given the “current drinking water crisis.”

Even now, state officials say that treated Flint River water is safe and capable of meeting state and federal standards. Officials say the problem may be that some of the aging pipes and service lines that carry water into Flint’s homes and businesses contain lead and are being corroded by water. The water Flint used to receive from Detroit was treated with chemicals intended to prevent such corrosion.

For months, questions about lead and other risks multiplied. “Everyone kept saying: ‘It’s safe! It’s safe! It’s safe!’ ” recalled Melissa Mays, a Flint resident who says she was sickened by the water and has helped organize residents over the issue.

Then in September, a researcher from Virginia Tech released findings from the water in hundreds of Flint homes showing elevated lead levels. Blood tests released by a local pediatrician — and corroborated last week by state officials analyzing their own testing — showed an increase in lead levels in children in some neighborhoods since 2014, when the city began drawing water from the river.

“We all have a concern about Flint’s drinking water in terms of what we’re seeing in terms of lead,” Mr. Snyder said last week.

Mr. Walling said that the move to river water occurred when an emergency manager controlled the city, though the City Council did vote for the city’s plans for a new, regional water system. He acknowledged supporting the move in a state of the city address, but said that he had not been given sufficient information about the safety risks.

“I had to work with what I knew at the time,” Mr. Walling, who is up for election next month, said in an interview.

But for many residents, the authorities failed the city by taking so long to react. “Anytime you have to weigh money against the health and welfare of people, it always has to be the health and welfare you go with," said the Rev. Alfred Harris, a local pastor who has stopped conducting baptisms at his church because of concerns about the water. "We've been talking about this for the last 14 months, and they did not give a sincere ear to any of us. Shame on you!"

LeeAnne Walters said her son, Gavin, 4, who has immune system issues, had suffered direct consequences. After the switch to river water, which sometimes looked brown in their house, Gavin dropped to 27 pounds, far below the weight of his twin brother, she said. He sometimes seemed unable to pronounce words he knew, she said, and then test results showed an elevated lead level in his blood.

"He is going to deal with the side effects of this for the rest of his life," Ms. Walters said. "I don't think there's a word angry enough to describe my anger. I trusted the city, and I helped the city poison my kid. Who thought this could happen in the United States?"

Waiting for answers, action in Flint water crisis

By Nancy Kaffer, Detroit Free Press Columnist 10:27 p.m. EDT October 7, 2015

They are still waiting for answers about the water in Flint.

And it's hard to say when, or if, those answers are coming.

It has been two weeks since a hospital researcher found that more Flint kids had been lead poisoned since the city switched its municipal water supply. And it has been nearly a week since the State of Michigan abruptly changed its posture, acknowledging, after months of denial and empty assurances, that Flint's water supply was compromised.

Since then, a lot of folks have worked diligently to sort out how things went so badly wrong in this small, impoverished city, and what the State of Michigan is doing to fix it.

But solutions remain elusive.

The state announced Friday that it has devoted $1 million to provide water filters for Flint residents, is expanding water testing and expediting improved water treatment. But two weeks on, Flint hasn't started adding chemicals to its water that would allow it to pass safely through the city's lead service pipes. That plan can likely be ready within a week, and can be enacted as soon as it's approved by the Michigan Department of Environmental Quality. Scientists say it would take roughly a month before those chemicals would begin to effect Flint's drinking water.

That would be the right play, unless the city opts to rejoin the Detroit Water and Sewerage Department -- as water experts have recommended -- a decision that would likely require financial assistance from the State of Michigan but could result in potable water flowing from Flint taps within two weeks. Is it likely to happen? Your guess is as good as mine.

And state officials continue to insist that the rules designed to monitor water systems, to ensure safe drinking water, worked as they're supposed to.

Kids in danger

The effects of lead on children are irreversible. Lead-poisoned kids can experience a host of behavioral and developmental problems, and in two Flint ZIP codes, the percentage of children affected by lead has doubled, reversing a long trend of improving rates.

That's because in 2014, Flint decided to pump untreated water from the Flint River, ending a decades-long relationship with the Detroit Water and Sewerage Department, while a new regional water authority it's joining is under construction. Since then, Flint's been treating its water locally, prompting a rash of problems related to coliform bacteria, a disinfectant and its byproduct, and now, elevated lead.

Both of these decisions were made while Flint was under state oversight, during the appointments of a series of emergency managers appointed by and answerable to Gov. Rick Snyder. The Michigan Department of Environmental Quality, whose director is appointed by the governor, must ensure that water systems are producing safe drinking water. Because Flint's water decisions were made under Snyder's emergency managers, the governor's decision-making authority is one step closer to Flint's water crisis.

The water Flint bought from Detroit was "finished," in other words, safe for humans to drink, but also treated to create a film inside those pipes that kept the lead out. That's called "corrosion control," and Detroit achieved this goal by adding phosphates to the water it pumps from Lake Huron.

Flint doesn't.

It took an unreasonably long time to get a solid answer to this question.

Corrosion control

Since April 2014, treatment at Flint's plant has included adding lime to the water it distributed to customers, largely to make the water less acidic, Liane Shekter Smith, chief of the MDEQ's office of drinking water and municipal assistance, said Tuesday.

"There was no corrosion control plan put forward at the time of the switch," Shekter Smith said. "There was a belief that (acidity) adjustment would provide adequate corrosion control, and that rounds of testing would confirm or refute that."

Any new water supply must be tested at six-month intervals to determine whether it meets the guidelines of the federal lead and copper rule, a standard established by the U.S. Environmental Protection Agency.

Tests of Flint's drinking water showed roughly 6 parts per billion (how the presence of lead in water is reckoned) in water sampled between June and December of 2014, said MDEQ spokesman Brad Wurfel. The U.S. Centers for Disease Control and Prevention said there is no acceptable level of lead exposure, but 6 ppb would, in some cases, fall below the EPA's actionable level of 15 ppb.

But because the community Flint serves is so large, it must meet a different threshold, 5 ppb. If a second round of testing showed that lead levels continued to exceed it, Flint would be required to improve its method of corrosion control.

Water sampled between January and June of 2015 showed an alarming increase: lead levels had risen to 11 ppb.

That kind of testing, Shekter Smith said, is the most reliable way to determine whether corrosion control is working.

"Having it in place is best way to know what is happening out in the system," she said.

Given the elevated blood-lead levels in Flint kids, the damage lead can cause, and the permanence of that damage, is that enough?

"I think that we are following the protocol," she said, "and the protocol got us to the right place, and we're making the right decisions."

“It did?" said Erik Olson, a senior strategy director for the Washington, D.C.-based Natural Resources Defense Council. "It didn’t sound like it."

Because the composition of water varies so greatly, there's no one right way to do corrosion control, Olson said. But Flint's plan to use lime only should have prompted questions before switching to Flint River water.

"They definitely should have said, 'OK, what’s the basis of that decision? What’s your engineering study that shows that that’s optimizing your corrosion control?' " Olson said.

That Flint's river water would pass through pipes with lead components shouldn't have been surprising, Olson said -- the presence of lead in the water and sewage infrastructure is well-documented, and well-known.

So why didn't Flint's engineers account for that, when developing a treatment plan? That's just one of the questions I still can't answer.

Flint health experts support Detroit water reconnection

Detroit News Staff and wire reports 7:58 a.m. EDT October 8, 2015

Flint — A committee of local experts in health, water and science has recommended that Flint reconnect to Detroit's water system.

Flint administrator Natasha Henderson urged the committee to not think about cost and decide "what's in the best interest" for Flint, which has a water crisis due to elevated levels of lead in children.

The Technical Advisory Committee met Wednesday. It rarely meets, but state officials say it will have a role in Flint's water quality. The committee has no formal role in deciding whether Flint stops using the Flint River for water.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. A Virginia Tech researcher says there would be dramatic reductions in about a month if the Detroit water system is used.

Gov. Rick Snyder's administration last week said it was considering temporarily reconnecting Flint to Detroit's water system temporarily in a bid to tackle the ongoing water quality and lead issues. The state also planned to expedite construction of a new water line to Lake Huron so a planned water authority that would service Flint could operate as soon as possible. An announcement on the Flint water plan was expected Thursday.

Sara Wurfel, a spokeswoman for Snyder, said the recommendation Wednesday "is an option we're helping thoroughly review and consider with the city, and the technical advisory committee's work is much appreciated in this matter. We're also focused on working hard in collaboration with all and implementing the key action steps outlined on Oct. 2 to help protect public health and ensure safe, accessible drinking water for Flint residents."

Since 2014, the Genesee County city has drawn its drinking water from the Flint River, which has led to major problems for residents.

Last month, the city issued an advisory about its drinking water after concerns surfaced about lead contamination.

On Tuesday, Snyder’s administration made free water filters available for residents.

Meanwhile, Uber drivers began collecting donations of bottled water for Flint schools. And Mayor Dayne Walling this week said he gave to Flint Community Schools some 19 palettes Kroger grocers donated.

Uber, others join in efforts to pour clean water into Flint

By Jiquanda Johnson | jjohns16@mlive.com The Flint Journal Follow on Twitter on October 08, 2015 at 5:00 AM, updated October 08, 2015 at 5:06 AM

FLINT, MI -- Businesses, charities and individuals have donated thousands of bottles of water to city of Flint residents and students since last year after controversy erupted over the quality of the city's water. Here is a list of some of the donors.

•□□□□□□□□ The United Way of Genesee County has actively participated in looking at ways to ease water woes in the city of Flint.

•□□□□□□□□ ZeroWater partnered with United Way and Flint Community Schools early October to bring water filters to the school district as a solution instead of having students drink bottled water.

•□□□□□□□□ Uber announced on Oct. 6 that drivers in Detroit will pick up donated bottles of water to bring to Flint throughout the week. People in Detroit just have to use their

Uber link to notify drivers that water needs to be picked up. The initiative runs from 2 to 7 p.m. from Oct. 6 - 8.

•□□□□□□□□ There was another donation of more than 4,000 gallons of bottled water through the Flint Diaper Bank and United Way of Genesee County on Oct. 7.

•□□□□□□□□ Donations came in from Flint-area Home Depots and Sam's Club after Hurley Medical Center doctors revealed that lead levels in children in Flint had elevated after the city switched from Detroit's water source to the Flint River.

•□□□□□□□□ Mott Community College issued an Oct. 7 media release saying they are donating bottled water to Pierce Elementary School on the city's north side on Oct. 8.

•□□□□□□□□ Swan Valley High School in Saginaw is collecting bottled water to send to Flint Public Schools. The bottled water drive ends Oct. 9 and school officials are hoping to drop donations off to Flint Community Schools on Oct. 9.

•□□□□□□□□ Bendle High School sophomore Chase Harrison raised money to purchase bottled water for Flint Community Schools.

•□□□□□□□□ Lavish Living, a Flint-based organization, has donated at least 200 cases of water to Flint Community Schools. As of Oct. 6 the organization was still working to collect more water for students.

•□□□□□□□□ The Flint Northwestern football team delivered an estimated 40 cases of water on Oct. 5 to Flint area residents between Dupont, Clio, Carpenter and Pierson roads.

•□□□□□□□□ General Motors Foundation

•□□□□□□□□ In January, Sargent Title Co. collected about 600 cases of water to donated to Flint residents.

•□□□□□□□□ Absopure Water Corp. donated a semi-truck worth of bottled water to Flint residents in January.

•□□□□□□□□ 1st Congregational United Church of Christ in Kalamazoo donated 4,000 bottles of water in September.

•□□□□□□□□ Al Serra Auto Plaza announced Oct. 7 that they will serve as drop off location for bottled water donations. If donors give 12 or more bottles of water, the dealership is offering free tire rotation.

•□□□□□□□□ In March, members of the Michigan National Action Network provided an estimated 10,000 bottles of water to Flint residents.

•□□□□□□□□ District leaders also expect at least 1,000 cases of bottled water to arrive at the Food Bank on Wednesday, Oct. 7, from the Saginaw Chippewa Indian Tribe and Soaring Eagle Waterpark and Hotel and Soaring Eagle Casino and Resort.

The Flint Journal will do updates as more donor names are provided. If anyone has donor information make a note of it in the comments section of this post, or email The Flint Journal at flnews@mlive.com.

Flint water crisis a bitter indictment of dysfunctional emergency manager

By Curt Guyette, Special to The Michigan Chronicle

Stark evidence of how terribly bad things can go when democracy is dismantled can be found in the elevated levels of lead in the children of Flint.

Because of decisions made by an appointed emergency manager, the tragically high costs of trying to balance a budget by switching to an unsafe water source will be borne by kids now forced to struggle with lower IQs, behavioral problems, learning disabilities, and a host of other ill effects.

This is what can happen when people are denied full access to representative government; they get poisoned by appointees with no connection to the community. Under Michigan’s emergency manager law – PA 436 — gubernatorial appointees can leave town claiming to have successfully solved a fiscal crisis when in fact what they leave in their wake is a catastrophe of monumental proportions.

In recent days, as the lead problems in Flint have made international news, former Flint emergency manager Darnell Earley – the man in charge when the switch to the Flint River was made, and who is now overseeing the education of the children in Detroit Public Schools – has tried to deny any responsibility for the catastrophe.

According to the Detroit Free Press, Earley claimed in an e-mailed statement "that he was not involved in the decision to use river water."

The governor's office and Earley can rightfully claim that the Flint mayor and City Council initially gave their blessing to the switch made 18 months ago. But that fig leaf provides little real cover for the state officials now trying to run away from their disastrous decision.

For starters, it doesn't matter what the mayor and City Council had to say when the decision was made. The emergency manager, under the sweeping powers granted under Public Act 436, had complete authority to make the switch regardless of what Flint's elected officials wanted.

Moreover, those officials were in essence working for the emergency manager, not the people who elected them. The EM decided how much pay the mayor and council members drew, and how much power they could wield.

How do things go when appointed officials try to buck the control of an EM? As we've seen in Benton Harbor and Detroit Public Schools, the answer is that they get denuded of all power and are completely marginalized.

The message to elected officials under state control has been made perfectly clear: play ball with the EM, or else.

But there is another problem with the EM law as well, one made painfully obvious in Flint. In a normally-functioning democracy, when it came time for a city of Flint to conduct tests to show it is in compliance with federal drinking water regulations, the city would be an independent actor with the Michigan Department of Environmental Quality (MDEQ) serving as a separate check on the system, another independent actor providing oversight to make sure the job is done correctly.

Instead, with Governor Rick Snyder's man being the one in charge when the decision was made to start using river water – a decision that was almost instantly revealed to be fraught with problems – the MDEQ, instead of being a watchdog protecting the citizens of Flint, served as a collaborator, working with the city to do everything in their power to skew results so that their tests would make it appear that the water was safe when it wasn't.

How do we know it wasn't safe? Because grassroots citizen groups worked with researchers at Virginia Tech and the ACLU of Michigan to conduct an independent test of nearly 300 city homes and found that the problem was far worse than the city and state claimed.

When those results were released in mid-September, the response by the state was to try and discredit them. The same was true a week later, when a Hurley Children's Hospital study found the number of children with elevated lead levels doubled after the switch to the Flint River was made.

Those two studies, and the host of problems with the state and city's water testing, last week prompted the ACLU of Michigan, the Natural Resources Defense Council, and an array of civic groups to file a petition with the U.S. EPA, calling upon the federal government to come in and provide the oversight necessary to ensure Flint's water is clean and safe.

Finally, after the state's own data confirmed those findings, and Genesee County officials took the drastic step of declaring a public health emergency, the governor and MDEQ were forced to finally admit the truth and started taking some action.

But even if those measures are enough – and they may well not be, failing as they do to require a switch back to the much cleaner and far less corrosive Detroit system – the damage already caused by this governor and his emergency managers is irreversible for the children who will struggle for the rest of their lives because of the decisions made while Flint was under state control and democracy was suspended.

Gov. Snyder says he'll make announcement on Flint water Thursday

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 07, 2015 at 9:45 PM, updated October 08, 2015 at 8:08 AM

FLINT, MI -- Gov. Rick Snyder says on Twitter that he will make an announcement about Flint water at 10 a.m. Thursday.

The planned announcement comes less than 24 hours after Flint's Technical Advisory Committee recommended the city end its use of the Flint River as its water source.

Since making the switch from using pre-treated Lake Huron water from the city of Detroit to treating river water at its own plant in April 2014, Flint officials have struggled to maintain the quality and safety of water delivered to city residents.

Snyder's Twitter message says, "Watch live tomorrow at 10 a.m. as I make an announcement regarding Flint water" at mi.gov/SnyderLive.

The state's Web site says the governor will be joined by Flint Mayor Dayne Walling, other state officials, and Ridgway White of the Charles Stewart Mott Foundation.

High levels of lead in city water and in the blood of children and infants since the city changed its water source have triggered a public health emergency here, including the mass distribution of lead-clearing faucet filters and bottled water.

Researchers from Virginia Tech university say river water has proven to be far more corrosive than water from the Detroit Water and Sewerage Department, causing lead to leach into homes that have lead service lines.

Flint City Administrator Natasha Henderson said today, Oct. 7, that she believes the position of state officials has been shifting on continued use of the Flint River, a change that was made while Flint was being run by a state-appointed emergency manager.

"We're to the point that the state believes this is a public health emergency," Henderson told the City Council. "From what I see, the state is working very well with us."

The city administrator is among officials who have advocated for a return to buying water from the DWSD since a study was released last month by Hurley Medical Center's director of pediatric residency program.

The study showed the percentage of Flint infants and children with above average lead levels has nearly doubled citywide since the switch to river water, and has nearly tripled among children in "high risk" areas of lead exposure.

Governor plans 10 a.m. announcement on troubled Flint water system

FLINT (AP) — Gov. Rick Snyder plans an announcement about the water system in Flint, which is facing a public health emergency over lead in its water.

A posting on the state's website says Snyder on Thursday morning will be joined for the announcement by officials including Flint Mayor Dayne Walling, state Department of Environmental Quality Director Dan Wyant and state Department of Health and Human Services Director Nick Lyon.

The announcement comes a day after a committee of local experts in health, water and science recommended Flint reconnect to Detroit's water system while it awaits a new pipeline to Lake Huron.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. State government and nonprofit groups are distributing filters and bottled water to Flint homes and schools.

Snyder's announcement can be viewed live at 10 a.m. Thursday, Oct. 8 by visiting http://1.usa.gov/1QapVxk

http://www.nytimes.com/2015/10/08/us/reassurances-end-in-flint-after-months-of-concern.html

Flint Officials Are No Longer Saying the Water Is Fine

By MONICA DAVEY, New York Times, OCT. 7, 2015

FLINT, Mich. — All along, through months of complaints from residents of this city about the peculiar colors and odors they said were coming from their faucets, the overriding message from the authorities here was that the water would be just fine.

Yes, there had been a boil order when fecal coliform bacteria turned up in some neighborhoods last year. And yes, the extra chlorine that was pumped in to solve that problem seemed to create another one — increased levels of a different contaminant.

Still, the guidance from Flint officials about the temporary water supply they switched to in 2014 — partly to save money — sounded assuring. In a notice sent to residents in July, city officials declared: “This is not an emergency. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours.”

The soothing talk has vanished. In recent weeks, testing has shown increased levels of lead in the blood of some Flint children — and health officials pointed to the water as a possible source.

First, the city advised residents to run their water for five minutes before using it, to use only cold water for drinking and cooking, and to install lead-removing water filters. Then county officials issued an emergency advisory recommending that people not drink Flint’s water unless it is tested for lead or filtered.

And last Friday, after corroborating that lead levels had risen in some children, state officials called for the water to be tested at all Flint public schools and for stepped-up efforts to replace lead service lines; they also promised $1 million to provide filters.

Officials met here on Wednesday afternoon, and talks were underway, officials said, for additional solutions that could come as early as Thursday. Gov. Rick Snyder said on Twitter late Wednesday that he planned to make an announcement about the situation on Thursday morning.

Private groups have raced to donate bottled water to schools, where the water fountains are now shut off, as well as filters to families who cannot afford them. Saying “we’re just in a heck of a bind,” Robert J. Pickell, the Genesee County sheriff, began serving bottled water and food that need not be cooked in water to hundreds of inmates in the county jail. Some residents have begun washing their children and pets with bottled water.

And Flint’s mayor, Dayne Walling, who had attended a 2014 event to celebrate the switch to the new water supply, called for returning to the city’s old water supply and urged state officials to provide millions of dollars to help pay for it.

The contaminated water was just the latest blow to Flint, an economically battered city that has struggled for years with factory closings, job losses and population decline.

Along Saginaw Street downtown, where at least one business had an “un-leaded” sign posted by a jug of water, residents had lingering questions: Would filters really do enough to make the water safe? What about unfiltered showers? Could they rely on the water at work and at restaurants? And why had it taken so long for leaders to figure out that there was a problem?

“I don’t think people know what’s going on at all,” said Chris Thornton, 49, who described the first blast of water from his faucets some days as looking like urine, smelling like bleach and tasting of metal. After his wife, Ronda, 50, felt sick to her stomach for months, the Thorntons began buying jugs of bottled water, though the price — on top of an already steep water bill — has been overwhelming.

“As far as my family,” Ronda Thornton said, “we’ve just given up on the city’s water.”

Flint's water problems are tied inextricably to its fiscal woes. In 1960, nearly 200,000 people lived here. But auto plants closed, and the population has dropped by half. By 2011, Flint's shrunken tax base and seemingly intractable budget problems prompted Mr. Snyder to appoint an emergency manager for the city. Over the next four years, the city had four managers overseeing operations. Along the way, the city switched its water supply.

For decades, the city bought water from Detroit, which treated water from Lake Huron, then piped it here, 70 miles to the northwest. But with the costs mounting, Flint's leaders decided they could save millions by joining a new regional authority that would draw and treat its own water from Lake Huron.

There was one complication: Flint needed an alternative water supply from April 2014 until the new regional system is ready, probably next year. In the interim, Flint switched to using water from the Flint River, which state officials say had been a backup source in the past.

Ask residents about the Flint River, and many of them roll their eyes. They say it was once as a dumping ground for car parts, grocery carts and refrigerators. There have been significant improvements and intensive restoration campaigns in recent years, though a Flint River Fest set for Friday has been postponed, organizers said, given the "current drinking water crisis."

Even now, state officials say that treated Flint River water is safe and capable of meeting state and federal standards. Officials say the problem may be that some of the aging pipes and service lines that carry water into Flint's homes and businesses contain lead and are being corroded by water. The water Flint used to receive from Detroit was treated with chemicals intended to prevent such corrosion.

For months, questions about lead and other risks multiplied. "Everyone kept saying: 'It's safe! It's safe! It's safe!' " recalled Melissa Mays, a Flint resident who says she was sickened by the water and has helped organize residents over the issue.

Then in September, a researcher from Virginia Tech released findings from the water in hundreds of Flint homes showing elevated lead levels. Blood tests released by a local pediatrician — and corroborated last week by state officials analyzing their own testing — showed an increase in lead levels in children in some neighborhoods since 2014, when the city began drawing water from the river.

“We all have a concern about Flint’s drinking water in terms of what we’re seeing in terms of lead,” Mr. Snyder said last week.

Mr. Walling said that the move to river water occurred when an emergency manager controlled the city, though the City Council did vote for the city’s plans for a new, regional water system. He acknowledged supporting the move in a state of the city address, but said that he had not been given sufficient information about the safety risks.

“I had to work with what I knew at the time,” Mr. Walling, who is up for election next month, said in an interview.

But for many residents, the authorities failed the city by taking so long to react. “Anytime you have to weigh money against the health and welfare of people, it always has to be the health and welfare you go with,” said the Rev. Alfred Harris, a local pastor who has stopped conducting baptisms at his church because of concerns about the water. “We’ve been talking about this for the last 14 months, and they did not give a sincere ear to any of us. Shame on you!”

LeeAnne Walters said her son, Gavin, 4, who has immune system issues, had suffered direct consequences. After the switch to river water, which sometimes looked brown in their house, Gavin dropped to 27 pounds, far below the weight of his twin brother, she said. He sometimes seemed unable to pronounce words he knew, she said, and then test results showed an elevated lead level in his blood.

“He is going to deal with the side effects of this for the rest of his life,” Ms. Walters said. “I don’t think there’s a word angry enough to describe my anger. I trusted the city, and I helped the city poison my kid. Who thought this could happen in the United States?”

---

http://www.freep.com/story/opinion/columnists/nancy-kaffer/2015/10/07/flint-water-crisis/73534078/

Waiting for answers, action in Flint water crisis

By Nancy Kaffer, Detroit Free Press Columnist 10:27 p.m. EDT October 7, 2015

They are still waiting for answers about the water in Flint.

And it's hard to say when, or if, those answers are coming.

It has been two weeks since a hospital researcher found that more Flint kids had been lead poisoned since the city switched its municipal water supply. And it has been nearly a week since the State of Michigan abruptly changed its posture, acknowledging, after months of denial and empty assurances, that Flint's water supply was compromised.

Since then, a lot of folks have worked diligently to sort out how things went so badly wrong in this small, impoverished city, and what the State of Michigan is doing to fix it.

But solutions remain elusive.

The state announced Friday that it has devoted $1 million to provide water filters for Flint residents, is expanding water testing and expediting improved water treatment. But two weeks on, Flint hasn't started adding chemicals to its water that would allow it to pass safely through the city's lead service pipes. That plan can likely be ready within a week, and can be enacted as soon as it's approved by the Michigan Department of

Environmental Quality. Scientists say it would take roughly a month before those chemicals would begin to effect Flint's drinking water.

That would be the right play, unless the city opts to rejoin the Detroit Water and Sewerage Department -- as water experts have recommended -- a decision that would likely require financial assistance from the State of Michigan but could result in potable water flowing from Flint taps within two weeks. Is it likely to happen? Your guess is as good as mine.

And state officials continue to insist that the rules designed to monitor water systems, to ensure safe drinking water, worked as they're supposed to.

Kids in danger

The effects of lead on children are irreversible. Lead-poisoned kids can experience a host of behavioral and developmental problems, and in two Flint ZIP codes, the percentage of children affected by lead has doubled, reversing a long trend of improving rates.

That's because in 2014, Flint decided to pump untreated water from the Flint River, ending a decades-long relationship with the Detroit Water and Sewerage Department, while a new regional water authority it's joining is under construction. Since then, Flint's been treating its water locally, prompting a rash of problems related to coliform bacteria, a disinfectant and its byproduct, and now, elevated lead.

Both of these decisions were made while Flint was under state oversight, during the appointments of a series of emergency managers appointed by and answerable to Gov. Rick Snyder. The Michigan Department of Environmental Quality, whose director is appointed by the governor, must ensure that water systems are producing safe drinking water. Because Flint's water decisions were made under Snyder's emergency managers, the governor's decision-making authority is one step closer to Flint's water crisis.

The water Flint bought from Detroit was "finished," in other words, safe for humans to drink, but also treated to create a film inside those pipes that kept the lead out. That's called "corrosion control," and Detroit achieved this goal by adding phosphates to the water it pumps from Lake Huron.

Flint doesn't.

It took an unreasonably long time to get a solid answer to this question.

Corrosion control

Since April 2014, treatment at Flint's plant has included adding lime to the water it distributed to customers, largely to make the water less acidic, Liane Shekter Smith, chief of the MDEQ's office of drinking water and municipal assistance, said Tuesday.

"There was no corrosion control plan put forward at the time of the switch," Shekter Smith said. "There was a belief that (acidity) adjustment would provide adequate corrosion control, and that rounds of testing would confirm or refute that."

Any new water supply must be tested at six-month intervals to determine whether it meets the guidelines of the federal lead and copper rule, a standard established by the U.S. Environmental Protection Agency.

Tests of Flint's drinking water showed roughly 6 parts per billion (how the presence of lead in water is reckoned) in water sampled between June and December of 2014, said MDEQ spokesman Brad Wurfel. The U.S. Centers for Disease Control and Prevention said there is no acceptable level of lead exposure, but 6 ppb would, in some cases, fall below the EPA's actionable level of 15 ppb.

But because the community Flint serves is so large, it must meet a different threshold, 5 ppb. If a second round of testing showed that lead levels continued to exceed it, Flint would be required to improve its method of corrosion control.

Water sampled between January and June of 2015 showed an alarming increase: lead levels had risen to 11 ppb.

That kind of testing, Shekter Smith said, is the most reliable way to determine whether corrosion control is working.

"Having it in place is best way to know what is happening out in the system," she said.

Given the elevated blood-lead levels in Flint kids, the damage lead can cause, and the permanence of that damage, is that enough?

"I think that we are following the protocol," she said, "and the protocol got us to the right place, and we're making the right decisions."

“It did?" said Erik Olson, a senior strategy director for the Washington, D.C.-based Natural Resources Defense Council. "It didn’t sound like it."

Because the composition of water varies so greatly, there's no one right way to do corrosion control, Olson said. But Flint's plan to use lime only should have prompted questions before switching to Flint River water.

"They definitely should have said, 'OK, what’s the basis of that decision? What’s your engineering study that shows that that’s optimizing your corrosion control?' " Olson said.

That Flint's river water would pass through pipes with lead components shouldn't have been surprising, Olson said -- the presence of lead in the water and sewage infrastructure is well-documented, and well-known.

So why didn't Flint's engineers account for that, when developing a treatment plan? That's just one of the questions I still can't answer.

---

http://www.detroitnews.com/story/news/local/michigan/2015/10/08/flint-health-experts-support-detroit-water-reconnection/73568654/

Flint health experts support Detroit water reconnection

Detroit News Staff and wire reports 7:58 a.m. EDT October 8, 2015

Flint — A committee of local experts in health, water and science has recommended that Flint reconnect to Detroit’s water system.

Flint administrator Natasha Henderson urged the committee to not think about cost and decide “what’s in the best interest” for Flint, which has a water crisis due to elevated levels of lead in children.

The Technical Advisory Committee met Wednesday. It rarely meets, but state officials say it will have a role in Flint’s water quality. The committee has no formal role in deciding whether Flint stops using the Flint River for water.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. A Virginia Tech researcher says there would be dramatic reductions in about a month if the Detroit water system is used.

Gov. Rick Snyder's administration last week said it was considering temporarily reconnecting Flint to Detroit's water system temporarily in a bid to tackle the ongoing water quality and lead issues. The state also planned to expedite construction of a new water line to Lake Huron so a planned water authority that would service Flint could operate as soon as possible. An announcement on the Flint water plan was expected Thursday.

Sara Wurfel, a spokeswoman for Snyder, said the recommendation Wednesday "is an option we're helping thoroughly review and consider with the city, and the technical advisory committee's work is much appreciated in this matter. We're also focused on working hard in collaboration with all and implementing the key action steps outlined on Oct. 2 to help protect public health and ensure safe, accessible drinking water for Flint residents."

Since 2014, the Genesee County city has drawn its drinking water from the Flint River, which has led to major problems for residents.

Last month, the city issued an advisory about its drinking water after concerns surfaced about lead contamination.

On Tuesday, Snyder's administration made free water filters available for residents.

Meanwhile, Uber drivers began collecting donations of bottled water for Flint schools. And Mayor Dayne Walling this week said he gave to Flint Community Schools some 19 palettes Kroger grocers donated.

Uber, others join in efforts to pour clean water into Flint

By Jiquanda Johnson | jjohns16@mlive.com The Flint Journal Follow on Twitter on October 08, 2015 at 5:00 AM, updated October 08, 2015 at 5:06 AM

FLINT, MI -- Businesses, charities and individuals have donated thousands of bottles of water to city of Flint residents and students since last year after controversy erupted over the quality of the city's water. Here is a list of some of the donors.

- The United Way of Genesee County has actively participated in looking at ways to ease water woes in the city of Flint.

- ZeroWater partnered with United Way and Flint Community Schools early October to bring water filters to the school district as a solution instead of having students drink bottled water.

- Uber announced on Oct. 6 that drivers in Detroit will pick up donated bottles of water to bring to Flint throughout the week. People in Detroit just have to use their Uber link to notify drivers that water needs to be picked up. The initiative runs from 2 to 7 p.m. from Oct. 6 - 8.

- There was another donation of more than 4,000 gallons of bottled water through the Flint Diaper Bank and United Way of Genesee County on Oct. 7.

- Donations came in from Flint-area Home Depots and Sam's Club after Hurley Medical Center doctors revealed that lead levels in children in Flint had elevated after the city switched from Detroit's water source to the Flint River.

- Mott Community College issued an Oct. 7 media release saying they are donating bottled water to Pierce Elementary School on the city's north side on Oct. 8.

- Swan Valley High School in Saginaw is collecting bottled water to send to Flint Public Schools. The bottled water drive ends Oct. 9 and school officials are hoping to drop donations off to Flint Community Schools on Oct. 9.

- Bendle High School sophomore Chase Harrison raised money to purchase bottled water for Flint Community Schools.

- Lavish Living, a Flint-based organization, has donated at least 200 cases of water to Flint Community Schools. As of Oct. 6 the organization was still working to collect more water for students.

•□□□□□□□□ The Flint Northwestern football team delivered an estimated 40 cases of water on Oct. 5 to Flint area residents between Dupont, Clio, Carpenter and Pierson roads.

•□□□□□□□□ General Motors Foundation

•□□□□□□□□ In January, Sargent Title Co. collected about 600 cases of water to donated to Flint residents.

•□□□□□□□□ Absopure Water Corp. donated a semi-truck worth of bottled water to Flint residents in January.

•□□□□□□□□ 1st Congregational United Church of Christ in Kalamazoo donated 4,000 bottles of water in September.

•□□□□□□□□ Al Serra Auto Plaza announced Oct. 7 that they will serve as drop off location for bottled water donations. If donors give 12 or more bottles of water, the dealership is offering free tire rotation.

•□□□□□□□□ In March, members of the Michigan National Action Network provided an estimated 10,000 bottles of water to Flint residents.

•□□□□□□□□ District leaders also expect at least 1,000 cases of bottled water to arrive at the Food Bank on Wednesday, Oct. 7, from the Saginaw Chippewa Indian Tribe and Soaring Eagle Waterpark and Hotel and Soaring Eagle Casino and Resort.

The Flint Journal will do updates as more donor names are provided. If anyone has donor information make a note of it in the comments section of this post, or email The Flint Journal at flnews@mlive.com.

Flint water crisis a bitter indictment of dysfunctional emergency manager

By Curt Guyette, Special to The Michigan Chronicle

Stark evidence of how terribly bad things can go when democracy is dismantled can be found in the elevated levels of lead in the children of Flint.

Because of decisions made by an appointed emergency manager, the tragically high costs of trying to balance a budget by switching to an unsafe water source will be borne by kids now forced to struggle with lower IQs, behavioral problems, learning disabilities, and a host of other ill effects.

This is what can happen when people are denied full access to representative government; they get poisoned by appointees with no connection to the community. Under Michigan's emergency manager law – PA 436 — gubernatorial appointees can leave town claiming to have successfully solved a fiscal crisis when in fact what they leave in their wake is a catastrophe of monumental proportions.

In recent days, as the lead problems in Flint have made international news, former Flint emergency manager Darnell Earley – the man in charge when the switch to the Flint River was made, and who is now overseeing the education of the children in Detroit Public Schools – has tried to deny any responsibility for the catastrophe.

According to the Detroit Free Press, Earley claimed in an e-mailed statement "that he was not involved in the decision to use river water."

The governor's office and Earley can rightfully claim that the Flint mayor and City Council initially gave their blessing to the switch made 18 months ago. But that fig leaf provides little real cover for the state officials now trying to run away from their disastrous decision.

For starters, it doesn't matter what the mayor and City Council had to say when the decision was made. The emergency manager, under the sweeping powers granted under Public Act 436, had complete authority to make the switch regardless of what Flint's elected officials wanted.

Moreover, those officials were in essence working for the emergency manager, not the people who elected them. The EM decided how much pay the mayor and council members drew, and how much power they could wield.

How do things go when appointed officials try to buck the control of an EM? As we've seen in Benton Harbor and Detroit Public Schools, the answer is that they get denuded of all power and are completely marginalized.

The message to elected officials under state control has been made perfectly clear: play ball with the EM, or else.

But there is another problem with the EM law as well, one made painfully obvious in Flint. In a normally-functioning democracy, when it came time for a city of Flint to conduct tests to show it is in compliance with federal drinking water regulations, the city would be an independent actor with the Michigan Department of Environmental Quality (MDEQ) serving as a separate check on the system, another independent actor providing oversight to make sure the job is done correctly.

Instead, with Governor Rick Snyder's man being the one in charge when the decision was made to start using river water – a decision that was almost instantly revealed to be fraught with problems – the MDEQ, instead of being a watchdog protecting the citizens of Flint, served as a collaborator, working with the city to do everything in their power to skew results so that their tests would make it appear that the water was safe when it wasn't.

How do we know it wasn't safe? Because grassroots citizen groups worked with researchers at Virginia Tech and the ACLU of Michigan to conduct an independent test of nearly 300 city homes and found that the problem was far worse than the city and state claimed.

When those results were released in mid-September, the response by the state was to try and discredit them. The same was true a week later, when a Hurley Children's Hospital study found the number of children with elevated lead levels doubled after the switch to the Flint River was made.

Those two studies, and the host of problems with the state and city's water testing, last week prompted the ACLU of Michigan, the Natural Resources Defense Council, and an array of civic groups to file a petition with the U.S. EPA, calling upon the federal government to come in and provide the oversight necessary to ensure Flint's water is clean and safe.

Finally, after the state's own data confirmed those findings, and Genesee County officials took the drastic step of declaring a public health emergency, the governor and MDEQ were forced to finally admit the truth and started taking some action.

But even if those measures are enough – and they may well not be, failing as they do to require a switch back to the much cleaner and far less corrosive Detroit system – the damage already caused by this governor and his emergency managers is irreversible for the children who will struggle for the rest of their lives because of the decisions made while Flint was under state control and democracy was suspended.

Subject: Draft updated Flint statement

Here's a first crack…

Last week's statement:

Actions that the State of Michigan and the City of Flint announced today are important steps to protect public health. The immediate steps being taken to implement corrosion control will reduce lead in drinking water, as required by the Safe Drinking Water Act. US EPA will continue to provide technical assistance to the State of Michigan and the City of Flint to support their joint effort.

Draft updated statement:

U.S. EPA supports the decision of the city of Flint to return to using Detroit water. This, and the other actions announced last week, are important steps to protect public health. Flint will benefit from the corrosion control treatment already implemented by Detroit, but more steps may be needed to reduce lead in drinking water, as required by the Safe Drinking Water Act. U.S. EPA will continue to provide technical assistance to the State of Michigan and the City of Flint to support their joint effort.

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 07, 2015 at 9:45 PM, updated October 08, 2015 at 8:08 AM

FLINT, MI -- Gov. Rick Snyder says on Twitter that he will make an announcement about Flint water at 10 a.m. Thursday.

The planned announcement comes less than 24 hours after Flint's Technical Advisory Committee recommended the city end its use of the Flint River as its water source.

Since making the switch from using pre-treated Lake Huron water from the city of Detroit to treating river water at its own plant in April 2014, Flint officials have struggled to maintain the quality and safety of water delivered to city residents.

Snyder's Twitter message says, "Watch live tomorrow at 10 a.m. as I make an announcement regarding Flint water" at mi.gov/SnyderLive.

The state's Web site says the governor will be joined by Flint Mayor Dayne Walling, other state officials, and Ridgway White of the Charles Stewart Mott Foundation.

High levels of lead in city water and in the blood of children and infants since the city changed its water source have triggered a public health emergency here, including the mass distribution of lead-clearing faucet filters and bottled water.

Researchers from Virginia Tech university say river water has proven to be far more corrosive than water from the Detroit Water and Sewerage Department, causing lead to leach into homes that have lead service lines.

Flint City Administrator Natasha Henderson said today, Oct. 7, that she believes the position of state officials has been shifting on continued use of the Flint River, a change that was made while Flint was being run by a state-appointed emergency manager.

"We're to the point that the state believes this is a public health emergency," Henderson told the City Council. "From what I see, the state is working very well with us."

The city administrator is among officials who have advocated for a return to buying water from the DWSD since a study was released last month by Hurley Medical Center's director of pediatric residency program.

The study showed the percentage of Flint infants and children with above average lead levels has nearly doubled citywide since the switch to river water, and has nearly tripled among children in "high risk" areas of lead exposure.

Governor plans 10 a.m. announcement on troubled Flint water system

FLINT (AP) — Gov. Rick Snyder plans an announcement about the water system in Flint, which is facing a public health emergency over lead in its water.

A posting on the state's website says Snyder on Thursday morning will be joined for the announcement by officials including Flint Mayor Dayne Walling, state Department of Environmental Quality Director Dan Wyant and state Department of Health and Human Services Director Nick Lyon.

The announcement comes a day after a committee of local experts in health, water and science recommended Flint reconnect to Detroit's water system while it awaits a new pipeline to Lake Huron.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. State government and nonprofit groups are distributing filters and bottled water to Flint homes and schools.

Snyder's announcement can be viewed live at 10 a.m. Thursday, Oct. 8 by visiting http://1.usa.gov/1QapVxk

Flint Officials Are No Longer Saying the Water Is Fine

By MONICA DAVEY, New York Times, OCT. 7, 2015

FLINT, Mich. — All along, through months of complaints from residents of this city about the peculiar colors and odors they said were coming from their faucets, the overriding message from the authorities here was that the water would be just fine.

Yes, there had been a boil order when fecal coliform bacteria turned up in some neighborhoods last year. And yes, the extra chlorine that was pumped in to solve that problem seemed to create another one — increased levels of a different contaminant.

Still, the guidance from Flint officials about the temporary water supply they switched to in 2014 — partly to save money — sounded assuring. In a notice sent to residents in July, city officials declared: “This is not an emergency. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours.”

The soothing talk has vanished. In recent weeks, testing has shown increased levels of lead in the blood of some Flint children — and health officials pointed to the water as a possible source.

First, the city advised residents to run their water for five minutes before using it, to use only cold water for drinking and cooking, and to install lead-removing water filters. Then county officials issued an emergency advisory recommending that people not drink Flint’s water unless it is tested for lead or filtered.

And last Friday, after corroborating that lead levels had risen in some children, state officials called for the water to be tested at all Flint public schools and for stepped-up efforts to replace lead service lines; they also promised $1 million to provide filters.

Officials met here on Wednesday afternoon, and talks were underway, officials said, for additional solutions that could come as early as Thursday. Gov. Rick Snyder said on Twitter late Wednesday that he planned to make an announcement about the situation on Thursday morning.

Private groups have raced to donate bottled water to schools, where the water fountains are now shut off, as well as filters to families who cannot afford them. Saying “we’re just in a heck of a bind,” Robert J. Pickell, the Genesee County sheriff, began serving bottled water and food that need not be cooked in water to hundreds of inmates in the county jail. Some residents have begun washing their children and pets with bottled water.

And Flint’s mayor, Dayne Walling, who had attended a 2014 event to celebrate the switch to the new water supply, called for returning to the city’s old water supply and urged state officials to provide millions of dollars to help pay for it.

The contaminated water was just the latest blow to Flint, an economically battered city that has struggled for years with factory closings, job losses and population decline.

Along Saginaw Street downtown, where at least one business had an “un-leaded” sign posted by a jug of water, residents had lingering questions: Would filters really do enough to make the water safe? What about unfiltered showers? Could they rely on the water at work and at restaurants? And why had it taken so long for leaders to figure out that there was a problem?

“I don’t think people know what’s going on at all,” said Chris Thornton, 49, who described the first blast of water from his faucets some days as looking like urine, smelling like bleach and tasting of metal. After his wife, Ronda, 50, felt sick to her stomach for months, the Thorntons began buying jugs of bottled water, though the price — on top of an already steep water bill — has been overwhelming.

“As far as my family,” Ronda Thornton said, “we’ve just given up on the city’s water.”

Flint’s water problems are tied inextricably to its fiscal woes. In 1960, nearly 200,000 people lived here. But auto plants closed, and the population has dropped by half. By 2011, Flint’s shrunken tax base and seemingly intractable budget problems prompted Mr. Snyder to appoint an emergency manager for the city. Over the next four years, the city had four managers overseeing operations. Along the way, the city switched its water supply.

For decades, the city bought water from Detroit, which treated water from Lake Huron, then piped it here, 70 miles to the northwest. But with the costs mounting, Flint’s leaders decided they could save millions by joining a new regional authority that would draw and treat its own water from Lake Huron.

There was one complication: Flint needed an alternative water supply from April 2014 until the new regional system is ready, probably next year. In the interim, Flint switched to using water from the Flint River, which state officials say had been a backup source in the past.

Ask residents about the Flint River, and many of them roll their eyes. They say it was once as a dumping ground for car parts, grocery carts and refrigerators. There have been significant improvements and intensive restoration campaigns in recent years, though a Flint River Fest set for Friday has been postponed, organizers said, given the “current drinking water crisis.”

Even now, state officials say that treated Flint River water is safe and capable of meeting state and federal standards. Officials say the problem may be that some of the aging pipes and service lines that carry water into Flint’s homes and businesses contain lead and are being corroded by water. The water Flint used to receive from Detroit was treated with chemicals intended to prevent such corrosion.

For months, questions about lead and other risks multiplied. “Everyone kept saying: ‘It’s safe! It’s safe! It’s safe!’ ” recalled Melissa Mays, a Flint resident who says she was sickened by the water and has helped organize residents over the issue.

Then in September, a researcher from Virginia Tech released findings from the water in hundreds of Flint homes showing elevated lead levels. Blood tests released by a local pediatrician — and corroborated last week by state officials analyzing their own testing — showed an increase in lead levels in children in some neighborhoods since 2014, when the city began drawing water from the river.

“We all have a concern about Flint’s drinking water in terms of what we’re seeing in terms of lead,” Mr. Snyder said last week.

Mr. Walling said that the move to river water occurred when an emergency manager controlled the city, though the City Council did vote for the city’s plans for a new, regional water system. He acknowledged supporting the move in a state of the city address, but said that he had not been given sufficient information about the safety risks.

“I had to work with what I knew at the time,” Mr. Walling, who is up for election next month, said in an interview.

But for many residents, the authorities failed the city by taking so long to react. “Anytime you have to weigh money against the health and welfare of people, it always has to be the health and welfare you go with,” said the Rev. Alfred Harris, a local pastor who has stopped conducting baptisms at his church because of concerns about the water. “We’ve been talking about this for the last 14 months, and they did not give a sincere ear to any of us. Shame on you!”

LeeAnne Walters said her son, Gavin, 4, who has immune system issues, had suffered direct consequences. After the switch to river water, which sometimes looked brown in their house, Gavin dropped to 27 pounds, far below the weight of his twin brother, she said. He sometimes seemed unable to pronounce words he knew, she said, and then test results showed an elevated lead level in his blood.

“He is going to deal with the side effects of this for the rest of his life,” Ms. Walters said. “I don’t think there’s a word angry enough to describe my anger. I trusted the city, and I helped the city poison my kid. Who thought this could happen in the United States?”

Waiting for answers, action in Flint water crisis

By Nancy Kaffer, Detroit Free Press Columnist 10:27 p.m. EDT October 7, 2015

They are still waiting for answers about the water in Flint.

And it's hard to say when, or if, those answers are coming.

It has been two weeks since a hospital researcher found that more Flint kids had been lead poisoned since the city switched its municipal water supply. And it has been nearly a week since the State of Michigan abruptly changed its posture, acknowledging, after months of denial and empty assurances, that Flint's water supply was compromised.

Since then, a lot of folks have worked diligently to sort out how things went so badly wrong in this small, impoverished city, and what the State of Michigan is doing to fix it.

But solutions remain elusive.

The state announced Friday that it has devoted $1 million to provide water filters for Flint residents, is expanding water testing and expediting improved water treatment. But two weeks on, Flint hasn't started adding chemicals to its water that would allow it to pass safely through the city's lead service pipes. That plan can likely be ready within a week, and can be enacted as soon as it's approved by the Michigan Department of Environmental Quality. Scientists say it would take roughly a month before those chemicals would begin to effect Flint's drinking water.

That would be the right play, unless the city opts to rejoin the Detroit Water and Sewerage Department -- as water experts have recommended -- a decision that would likely require financial assistance from the State of Michigan but could result in potable water flowing from Flint taps within two weeks. Is it likely to happen? Your guess is as good as mine.

And state officials continue to insist that the rules designed to monitor water systems, to ensure safe drinking water, worked as they're supposed to.

Kids in danger

The effects of lead on children are irreversible. Lead-poisoned kids can experience a host of behavioral and developmental problems, and in two Flint ZIP codes, the percentage of children affected by lead has doubled, reversing a long trend of improving rates.

That's because in 2014, Flint decided to pump untreated water from the Flint River, ending a decades-long relationship with the Detroit Water and Sewerage Department, while a new regional water authority it's joining is under construction. Since then, Flint's been treating its water locally, prompting a rash of problems related to coliform bacteria, a disinfectant and its byproduct, and now, elevated lead.

Both of these decisions were made while Flint was under state oversight, during the appointments of a series of emergency managers appointed by and answerable to Gov. Rick Snyder. The Michigan Department of Environmental Quality, whose director is appointed by the governor, must ensure that water systems are producing safe drinking water. Because Flint's water decisions were made under Snyder's emergency managers, the governor's decision-making authority is one step closer to Flint's water crisis.

The water Flint bought from Detroit was "finished," in other words, safe for humans to drink, but also treated to create a film inside those pipes that kept the lead out. That's called "corrosion control," and Detroit achieved this goal by adding phosphates to the water it pumps from Lake Huron.

Flint doesn't.

It took an unreasonably long time to get a solid answer to this question.

Corrosion control

Since April 2014, treatment at Flint's plant has included adding lime to the water it distributed to customers, largely to make the water less acidic, Liane Shekter Smith, chief of the MDEQ's office of drinking water and municipal assistance, said Tuesday.

"There was no corrosion control plan put forward at the time of the switch," Shekter Smith said. "There was a belief that (acidity) adjustment would provide adequate corrosion control, and that rounds of testing would confirm or refute that."

Any new water supply must be tested at six-month intervals to determine whether it meets the guidelines of the federal lead and copper rule, a standard established by the U.S. Environmental Protection Agency.

Tests of Flint's drinking water showed roughly 6 parts per billion (how the presence of lead in water is reckoned) in water sampled between June and December of 2014, said MDEQ spokesman Brad Wurfel. The U.S. Centers for Disease Control and Prevention said there is no acceptable level of lead exposure, but 6 ppb would, in some cases, fall below the EPA's actionable level of 15 ppb.

But because the community Flint serves is so large, it must meet a different threshold, 5 ppb. If a second round of testing showed that lead levels continued to exceed it, Flint would be required to improve its method of corrosion control.

Water sampled between January and June of 2015 showed an alarming increase: lead levels had risen to 11 ppb.

That kind of testing, Shekter Smith said, is the most reliable way to determine whether corrosion control is working.

"Having it in place is best way to know what is happening out in the system," she said.

Given the elevated blood-lead levels in Flint kids, the damage lead can cause, and the permanence of that damage, is that enough?

"I think that we are following the protocol," she said, "and the protocol got us to the right place, and we're making the right decisions."

“It did?" said Erik Olson, a senior strategy director for the Washington, D.C.-based Natural Resources Defense Council. "It didn’t sound like it."

Because the composition of water varies so greatly, there's no one right way to do corrosion control, Olson said. But Flint's plan to use lime only should have prompted questions before switching to Flint River water.

"They definitely should have said, 'OK, what’s the basis of that decision? What’s your engineering study that shows that that’s optimizing your corrosion control?' " Olson said.

That Flint's river water would pass through pipes with lead components shouldn't have been surprising, Olson said -- the presence of lead in the water and sewage infrastructure is well-documented, and well-known.

So why didn't Flint's engineers account for that, when developing a treatment plan? That's just one of the questions I still can't answer.

http://www.detroitnews.com/story/news/local/michigan/2015/10/08/flint-health-experts-support-detroit-water-reconnection/73568654/

Flint health experts support Detroit water reconnection

Detroit News Staff and wire reports 7:58 a.m. EDT October 8, 2015

Flint — A committee of local experts in health, water and science has recommended that Flint reconnect to Detroit's water system.

Flint administrator Natasha Henderson urged the committee to not think about cost and decide "what's in the best interest" for Flint, which has a water crisis due to elevated levels of lead in children.

The Technical Advisory Committee met Wednesday. It rarely meets, but state officials say it will have a role in Flint's water quality. The committee has no formal role in deciding whether Flint stops using the Flint River for water.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. A Virginia Tech researcher says there would be dramatic reductions in about a month if the Detroit water system is used.

Gov. Rick Snyder's administration last week said it was considering temporarily reconnecting Flint to Detroit's water system temporarily in a bid to tackle the ongoing water quality and lead issues. The state also planned to expedite construction of a new water line to Lake Huron so a planned water authority that would service Flint could operate as soon as possible. An announcement on the Flint water plan was expected Thursday.

Sara Wurfel, a spokeswoman for Snyder, said the recommendation Wednesday "is an option we're helping thoroughly review and consider with the city, and the technical advisory committee's work is much appreciated in this matter. We're also focused on working hard in collaboration with all and implementing the key action steps outlined on Oct. 2 to help protect public health and ensure safe, accessible drinking water for Flint residents."

Since 2014, the Genesee County city has drawn its drinking water from the Flint River, which has led to major problems for residents.

Last month, the city issued an advisory about its drinking water after concerns surfaced about lead contamination.

On Tuesday, Snyder's administration made free water filters available for residents.

Meanwhile, Uber drivers began collecting donations of bottled water for Flint schools. And Mayor Dayne Walling this week said he gave to Flint Community Schools some 19 palettes Kroger grocers donated.

Uber, others join in efforts to pour clean water into Flint

By Jiquanda Johnson | jjohns16@mlive.com The Flint Journal Follow on Twitter on October 08, 2015 at 5:00 AM, updated October 08, 2015 at 5:06 AM

FLINT, MI -- Businesses, charities and individuals have donated thousands of bottles of water to city of Flint residents and students since last year after controversy erupted over the quality of the city's water. Here is a list of some of the donors.

- The United Way of Genesee County has actively participated in looking at ways to ease water woes in the city of Flint.

- ZeroWater partnered with United Way and Flint Community Schools early October to bring water filters to the school district as a solution instead of having students drink bottled water.

- Uber announced on Oct. 6 that drivers in Detroit will pick up donated bottles of water to bring to Flint throughout the week. People in Detroit just have to use their Uber link to notify drivers that water needs to be picked up. The initiative runs from 2 to 7 p.m. from Oct. 6 - 8.

- There was another donation of more than 4,000 gallons of bottled water through the Flint Diaper Bank and United Way of Genesee County on Oct. 7.

- Donations came in from Flint-area Home Depots and Sam's Club after Hurley Medical Center doctors revealed that lead levels in children in Flint had elevated after the city switched from Detroit's water source to the Flint River.

- Mott Community College issued an Oct. 7 media release saying they are donating bottled water to Pierce Elementary School on the city's north side on Oct. 8.

- Swan Valley High School in Saginaw is collecting bottled water to send to Flint Public Schools. The bottled water drive ends Oct. 9 and school officials are hoping to drop donations off to Flint Community Schools on Oct. 9.

- Bendle High School sophomore Chase Harrison raised money to purchase bottled water for Flint Community Schools.

- Lavish Living, a Flint-based organization, has donated at least 200 cases of water to Flint Community Schools. As of Oct. 6 the organization was still working to collect more water for students.

- The Flint Northwestern football team delivered an estimated 40 cases of water on Oct. 5 to Flint area residents between Dupont, Clio, Carpenter and Pierson roads.

- General Motors Foundation

- In January, Sargent Title Co. collected about 600 cases of water to donated to Flint residents.

- Absopure Water Corp. donated a semi-truck worth of bottled water to Flint residents in January.

- 1st Congregational United Church of Christ in Kalamazoo donated 4,000 bottles of water in September.

- Al Serra Auto Plaza announced Oct. 7 that they will serve as drop off location for bottled water donations. If donors give 12 or more bottles of water, the dealership is offering free tire rotation.

- In March, members of the Michigan National Action Network provided an estimated 10,000 bottles of water to Flint residents.

- District leaders also expect at least 1,000 cases of bottled water to arrive at the Food Bank on Wednesday, Oct. 7, from the Saginaw Chippewa Indian Tribe and Soaring Eagle Waterpark and Hotel and Soaring Eagle Casino and Resort.

The Flint Journal will do updates as more donor names are provided. If anyone has donor information make a note of it in the comments section of this post, or email The Flint Journal at flnews@mlive.com.

http://michronicleonline.com/2015/10/07/flint-water-crisis-a-bitter-indictment-of-dysfunctional-emergency-manager/

Flint water crisis a bitter indictment of dysfunctional emergency manager

By Curt Guyette, Special to The Michigan Chronicle

Stark evidence of how terribly bad things can go when democracy is dismantled can be found in the elevated levels of lead in the children of Flint.

Because of decisions made by an appointed emergency manager, the tragically high costs of trying to balance a budget by switching to an unsafe water source will be borne by kids now forced to struggle with lower IQs, behavioral problems, learning disabilities, and a host of other ill effects.

This is what can happen when people are denied full access to representative government; they get poisoned by appointees with no connection to the community. Under Michigan's emergency manager law – PA 436 — gubernatorial appointees can leave town claiming to have successfully solved a fiscal crisis when in fact what they leave in their wake is a catastrophe of monumental proportions.

In recent days, as the lead problems in Flint have made international news, former Flint emergency manager Darnell Earley – the man in charge when the switch to the Flint River was made, and who is now overseeing the education of the children in Detroit Public Schools – has tried to deny any responsibility for the catastrophe.

According to the Detroit Free Press, Earley claimed in an e-mailed statement "that he was not involved in the decision to use river water."

The governor's office and Earley can rightfully claim that the Flint mayor and City Council initially gave their blessing to the switch made 18 months ago. But that fig leaf provides little real cover for the state officials now trying to run away from their disastrous decision.

For starters, it doesn't matter what the mayor and City Council had to say when the decision was made. The emergency manager, under the sweeping powers granted under Public Act 436, had complete authority to make the switch regardless of what Flint's elected officials wanted.

Moreover, those officials were in essence working for the emergency manager, not the people who elected them. The EM decided how much pay the mayor and council members drew, and how much power they could wield.

How do things go when appointed officials try to buck the control of an EM? As we've seen in Benton Harbor and Detroit Public Schools, the answer is that they get denuded of all power and are completely marginalized.

The message to elected officials under state control has been made perfectly clear: play ball with the EM, or else.

But there is another problem with the EM law as well, one made painfully obvious in Flint. In a normally-functioning democracy, when it came time for a city of Flint to conduct tests to show it is in compliance with federal drinking water regulations, the city would be an independent actor with the Michigan Department of Environmental Quality (MDEQ) serving as a separate check on the system, another independent actor providing oversight to make sure the job is done correctly.

Instead, with Governor Rick Snyder's man being the one in charge when the decision was made to start using river water – a decision that was almost instantly revealed to be fraught with problems – the MDEQ, instead of being a watchdog protecting the citizens of Flint, served as a collaborator, working with the city to do everything in their power to skew results so that their tests would make it appear that the water was safe when it wasn't.

How do we know it wasn't safe? Because grassroots citizen groups worked with researchers at Virginia Tech and the ACLU of Michigan to conduct an independent test of nearly 300 city homes and found that the problem was far worse than the city and state claimed.

When those results were released in mid-September, the response by the state was to try and discredit them. The same was true a week later, when a Hurley Children's Hospital study found the number of children with elevated lead levels doubled after the switch to the Flint River was made.

Those two studies, and the host of problems with the state and city's water testing, last week prompted the ACLU of Michigan, the Natural Resources Defense Council, and an array of civic groups to file a petition with the U.S. EPA, calling upon the federal government to come in and provide the oversight necessary to ensure Flint's water is clean and safe.

Finally, after the state's own data confirmed those findings, and Genesee County officials took the drastic step of declaring a public health emergency, the governor and MDEQ were forced to finally admit the truth and started taking some action.

But even if those measures are enough – and they may well not be, failing as they do to require a switch back to the much cleaner and far less corrosive Detroit system – the damage already caused by this governor and his emergency managers is irreversible for the children who will struggle for the rest of their lives because of the decisions made while Flint was under state control and democracy was suspended.

Subject: Draft updated Flint statement

Here's a first crack…

Last week's statement:

Actions that the State of Michigan and the City of Flint announced today are important steps to protect public health. The immediate steps being taken to implement corrosion control will reduce lead in drinking water, as required by the Safe Drinking Water Act. US EPA will continue to provide technical assistance to the State of Michigan and the City of Flint to support their joint effort.

Draft updated statement:

U.S. EPA supports the decision of the city of Flint to return to using Detroit water. This, and the other actions announced last week, are important steps to protect public health. Over time, Flint will benefit from the corrosion control treatment already implemented by Detroit, as required by the Safe Drinking Water Act. However, in the near-term continued efforts to reduce lead in drinking water may be needed. U.S. EPA will continue to provide technical assistance to the State of Michigan and the City of Flint to support their joint effort.

U.S. EPA supports the decision of the city of Flint to return to using Detroit water. This, and the other actions announced last week, are important steps to protect public health. Flint will benefit from the corrosion control treatment already implemented by Detroit, but more steps may be needed to reduce lead in drinking water, as required by the Safe Drinking Water Act. Gov. Snyder says he'll make announcement on Flint water Thursday

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 07, 2015 at 9:45 PM, updated October 08, 2015 at 8:08 AM

FLINT, MI -- Gov. Rick Snyder says on Twitter that he will make an announcement about Flint water at 10 a.m. Thursday.

The planned announcement comes less than 24 hours after Flint's Technical Advisory Committee recommended the city end its use of the Flint River as its water source.

Since making the switch from using pre-treated Lake Huron water from the city of

Detroit to treating river water at its own plant in April 2014, Flint officials have struggled to maintain the quality and safety of water delivered to city residents.

Snyder's Twitter message says, "Watch live tomorrow at 10 a.m. as I make an announcement regarding Flint water" at mi.gov/SnyderLive.

The state's Web site says the governor will be joined by Flint Mayor Dayne Walling, other state officials, and Ridgway White of the Charles Stewart Mott Foundation.

High levels of lead in city water and in the blood of children and infants since the city changed its water source have triggered a public health emergency here, including the mass distribution of lead-clearing faucet filters and bottled water.

Researchers from Virginia Tech university say river water has proven to be far more corrosive than water from the Detroit Water and Sewerage Department, causing lead to leach into homes that have lead service lines.

Flint City Administrator Natasha Henderson said today, Oct. 7, that she believes the position of state officials has been shifting on continued use of the Flint River, a change that was made while Flint was being run by a state-appointed emergency manager.

"We're to the point that the state believes this is a public health emergency," Henderson told the City Council. "From what I see, the state is working very well with us."

The city administrator is among officials who have advocated for a return to buying water from the DWSD since a study was released last month by Hurley Medical Center's director of pediatric residency program.

The study showed the percentage of Flint infants and children with above average lead levels has nearly doubled citywide since the switch to river water, and has nearly tripled among children in "high risk" areas of lead exposure.

Governor plans 10 a.m. announcement on troubled Flint water system

FLINT (AP) — Gov. Rick Snyder plans an announcement about the water system in Flint, which is facing a public health emergency over lead in its water.

A posting on the state's website says Snyder on Thursday morning will be joined for the announcement by officials including Flint Mayor Dayne Walling, state Department of Environmental Quality Director Dan Wyant and state Department of Health and Human Services Director Nick Lyon.

The announcement comes a day after a committee of local experts in health, water and science recommended Flint reconnect to Detroit's water system while it awaits a new pipeline to Lake Huron.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. State government and nonprofit groups are distributing filters and bottled water to Flint homes and schools.

Snyder's announcement can be viewed live at 10 a.m. Thursday, Oct. 8 by visiting http://1.usa.gov/1QapVxk

Flint Officials Are No Longer Saying the Water Is Fine

By MONICA DAVEY, New York Times, OCT. 7, 2015

FLINT, Mich. — All along, through months of complaints from residents of this city about the peculiar colors and odors they said were coming from their faucets, the overriding message from the authorities here was that the water would be just fine.

Yes, there had been a boil order when fecal coliform bacteria turned up in some neighborhoods last year. And yes, the extra chlorine that was pumped in to solve that problem seemed to create another one — increased levels of a different contaminant.

Still, the guidance from Flint officials about the temporary water supply they switched to in 2014 — partly to save money — sounded assuring. In a notice sent to residents in July, city officials declared: “This is not an emergency. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours.”

The soothing talk has vanished. In recent weeks, testing has shown increased levels of lead in the blood of some Flint children — and health officials pointed to the water as a possible source.

First, the city advised residents to run their water for five minutes before using it, to use only cold water for drinking and cooking, and to install lead-removing water filters. Then county officials issued an emergency advisory recommending that people not drink Flint’s water unless it is tested for lead or filtered.

And last Friday, after corroborating that lead levels had risen in some children, state officials called for the water to be tested at all Flint public schools and for stepped-up efforts to replace lead service lines; they also promised $1 million to provide filters.

Officials met here on Wednesday afternoon, and talks were underway, officials said, for additional solutions that could come as early as Thursday. Gov. Rick Snyder said on Twitter late Wednesday that he planned to make an announcement about the situation on Thursday morning.

Private groups have raced to donate bottled water to schools, where the water fountains are now shut off, as well as filters to families who cannot afford them. Saying “we’re just in a heck of a bind,” Robert J. Pickell, the Genesee County sheriff, began serving bottled water and food that need not be cooked in water to hundreds of inmates in the county jail. Some residents have begun washing their children and pets with bottled water.

And Flint’s mayor, Dayne Walling, who had attended a 2014 event to celebrate the switch to the new water supply, called for returning to the city’s old water supply and urged state officials to provide millions of dollars to help pay for it.

The contaminated water was just the latest blow to Flint, an economically battered city that has struggled for years with factory closings, job losses and population decline.

Along Saginaw Street downtown, where at least one business had an “un-leaded” sign posted by a jug of water, residents had lingering questions: Would filters really do enough to make the water safe? What about unfiltered showers? Could they rely on the water at work and at restaurants? And why had it taken so long for leaders to figure out that there was a problem?

“I don’t think people know what’s going on at all,” said Chris Thornton, 49, who described the first blast of water from his faucets some days as looking like urine, smelling like bleach and tasting of metal. After his wife, Ronda, 50, felt sick to her stomach for months, the Thorntons began buying jugs of bottled water, though the price — on top of an already steep water bill — has been overwhelming.

“As far as my family,” Ronda Thornton said, “we’ve just given up on the city’s water.”

Flint’s water problems are tied inextricably to its fiscal woes. In 1960, nearly 200,000 people lived here. But auto plants closed, and the population has dropped by half. By 2011, Flint’s shrunken tax base and seemingly intractable budget problems prompted Mr. Snyder to appoint an emergency manager for the city. Over the next four years, the city had four managers overseeing operations. Along the way, the city switched its water supply.

For decades, the city bought water from Detroit, which treated water from Lake Huron, then piped it here, 70 miles to the northwest. But with the costs mounting, Flint’s leaders decided they could save millions by joining a new regional authority that would draw and treat its own water from Lake Huron.

There was one complication: Flint needed an alternative water supply from April 2014 until the new regional system is ready, probably next year. In the interim, Flint switched to using water from the Flint River, which state officials say had been a backup source in the past.

Ask residents about the Flint River, and many of them roll their eyes. They say it was once as a dumping ground for car parts, grocery carts and refrigerators. There have been significant improvements and intensive restoration campaigns in recent years, though a Flint River Fest set for Friday has been postponed, organizers said, given the “current drinking water crisis.”

Even now, state officials say that treated Flint River water is safe and capable of meeting state and federal standards. Officials say the problem may be that some of the aging pipes and service lines that carry water into Flint's homes and businesses contain lead and are being corroded by water. The water Flint used to receive from Detroit was treated with chemicals intended to prevent such corrosion.

For months, questions about lead and other risks multiplied. “Everyone kept saying: ‘It's safe! It's safe! It's safe!’ ” recalled Melissa Mays, a Flint resident who says she was sickened by the water and has helped organize residents over the issue.

Then in September, a researcher from Virginia Tech released findings from the water in hundreds of Flint homes showing elevated lead levels. Blood tests released by a local pediatrician — and corroborated last week by state officials analyzing their own testing — showed an increase in lead levels in children in some neighborhoods since 2014, when the city began drawing water from the river.

“We all have a concern about Flint's drinking water in terms of what we're seeing in terms of lead,” Mr. Snyder said last week.

Mr. Walling said that the move to river water occurred when an emergency manager controlled the city, though the City Council did vote for the city's plans for a new, regional water system. He acknowledged supporting the move in a state of the city address, but said that he had not been given sufficient information about the safety risks.

“I had to work with what I knew at the time,” Mr. Walling, who is up for election next month, said in an interview.

But for many residents, the authorities failed the city by taking so long to react. “Anytime you have to weigh money against the health and welfare of people, it always has to be the health and welfare you go with,” said the Rev. Alfred Harris, a local pastor who has stopped conducting baptisms at his church because of concerns about the water. “We've been talking about this for the last 14 months, and they did not give a sincere ear to any of us. Shame on you!”

LeeAnne Walters said her son, Gavin, 4, who has immune system issues, had suffered direct consequences. After the switch to river water, which sometimes looked brown in their house, Gavin dropped to 27 pounds, far below the weight of his twin brother, she said. He sometimes seemed unable to pronounce words he knew, she said, and then test results showed an elevated lead level in his blood.

“He is going to deal with the side effects of this for the rest of his life,” Ms. Walters said. “I don’t think there’s a word angry enough to describe my anger. I trusted the city, and I helped the city poison my kid. Who thought this could happen in the United States?”

Waiting for answers, action in Flint water crisis

By Nancy Kaffer, Detroit Free Press Columnist 10:27 p.m. EDT October 7, 2015

They are still waiting for answers about the water in Flint.

And it's hard to say when, or if, those answers are coming.

It has been two weeks since a hospital researcher found that more Flint kids had been lead poisoned since the city switched its municipal water supply. And it has been nearly a week since the State of Michigan abruptly changed its posture, acknowledging, after months of denial and empty assurances, that Flint's water supply was compromised.

Since then, a lot of folks have worked diligently to sort out how things went so badly wrong in this small, impoverished city, and what the State of Michigan is doing to fix it.

But solutions remain elusive.

The state announced Friday that it has devoted $1 million to provide water filters for Flint residents, is expanding water testing and expediting improved water treatment. But two weeks on, Flint hasn't started adding chemicals to its water that would allow it to pass safely through the city's lead service pipes. That plan can likely be ready within a week, and can be enacted as soon as it's approved by the Michigan Department of Environmental Quality. Scientists say it would take roughly a month before those chemicals would begin to effect Flint's drinking water.

That would be the right play, unless the city opts to rejoin the Detroit Water and Sewerage Department -- as water experts have recommended -- a decision that would likely require financial assistance from the State of Michigan but could result in potable water flowing from Flint taps within two weeks. Is it likely to happen? Your guess is as good as mine.

And state officials continue to insist that the rules designed to monitor water systems, to ensure safe drinking water, worked as they're supposed to.

Kids in danger

The effects of lead on children are irreversible. Lead-poisoned kids can experience a host of behavioral and developmental problems, and in two Flint ZIP codes, the percentage of children affected by lead has doubled, reversing a long trend of improving rates.

That's because in 2014, Flint decided to pump untreated water from the Flint River, ending a decades-long relationship with the Detroit Water and Sewerage

Department, while a new regional water authority it's joining is under construction. Since then, Flint's been treating its water locally, prompting a rash of problems related to coliform bacteria, a disinfectant and its byproduct, and now, elevated lead.

Both of these decisions were made while Flint was under state oversight, during the appointments of a series of emergency managers appointed by and answerable to Gov. Rick Snyder. The Michigan Department of Environmental Quality, whose director is appointed by the governor, must ensure that water systems are producing safe drinking water. Because Flint's water decisions were made under Snyder's emergency managers, the governor's decision-making authority is one step closer to Flint's water crisis.

The water Flint bought from Detroit was "finished," in other words, safe for humans to drink, but also treated to create a film inside those pipes that kept the lead out. That's called "corrosion control," and Detroit achieved this goal by adding phosphates to the water it pumps from Lake Huron.

Flint doesn't.

It took an unreasonably long time to get a solid answer to this question.

Corrosion control

Since April 2014, treatment at Flint's plant has included adding lime to the water it distributed to customers, largely to make the water less acidic, Liane Shekter Smith, chief of the MDEQ's office of drinking water and municipal assistance, said Tuesday.

"There was no corrosion control plan put forward at the time of the switch," Shekter Smith said. "There was a belief that (acidity) adjustment would provide adequate corrosion control, and that rounds of testing would confirm or refute that."

Any new water supply must be tested at six-month intervals to determine whether it meets the guidelines of the federal lead and copper rule, a standard established by the U.S. Environmental Protection Agency.

Tests of Flint's drinking water showed roughly 6 parts per billion (how the presence of lead in water is reckoned) in water sampled between June and December of 2014, said MDEQ spokesman Brad Wurfel. The U.S. Centers for Disease Control and Prevention said there is no acceptable level of lead exposure, but 6 ppb would, in some cases, fall below the EPA's actionable level of 15 ppb.

But because the community Flint serves is so large, it must meet a different threshold, 5 ppb. If a second round of testing showed that lead levels continued to exceed it, Flint would be required to improve its method of corrosion control.

Water sampled between January and June of 2015 showed an alarming increase: lead levels had risen to 11 ppb.

That kind of testing, Shekter Smith said, is the most reliable way to determine whether corrosion control is working.

"Having it in place is best way to know what is happening out in the system," she said.

Given the elevated blood-lead levels in Flint kids, the damage lead can cause, and the permanence of that damage, is that enough?

"I think that we are following the protocol," she said, "and the protocol got us to the right place, and we're making the right decisions."

“It did?" said Erik Olson, a senior strategy director for the Washington, D.C.-based Natural Resources Defense Council. "It didn’t sound like it."

Because the composition of water varies so greatly, there's no one right way to do corrosion control, Olson said. But Flint's plan to use lime only should have prompted questions before switching to Flint River water.

"They definitely should have said, 'OK, what’s the basis of that decision? What’s your engineering study that shows that that’s optimizing your corrosion control?' " Olson said.

That Flint's river water would pass through pipes with lead components shouldn't have been surprising, Olson said -- the presence of lead in the water and sewage infrastructure is well-documented, and well-known.

So why didn't Flint's engineers account for that, when developing a treatment plan? That's just one of the questions I still can't answer.

http://www.detroitnews.com/story/news/local/michigan/2015/10/08/flint-health-experts-support-detroit-water-reconnection/73568654/

Flint health experts support Detroit water reconnection

Detroit News Staff and wire reports 7:58 a.m. EDT October 8, 2015

Flint — A committee of local experts in health, water and science has recommended that Flint reconnect to Detroit’s water system.

Flint administrator Natasha Henderson urged the committee to not think about cost and decide “what’s in the best interest” for Flint, which has a water crisis due to elevated levels of lead in children.

The Technical Advisory Committee met Wednesday. It rarely meets, but state officials say it will have a role in Flint’s water quality. The committee has no formal role in deciding whether Flint stops using the Flint River for water.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. A Virginia Tech researcher says there would be dramatic reductions in about a month if the Detroit water system is used.

Gov. Rick Snyder’s administration last week said it was considering temporarily reconnecting Flint to Detroit’s water system temporarily in a bid to tackle the ongoing water quality and lead issues. The state also planned to expedite construction of a new water line to Lake Huron so a planned water authority that would service Flint could operate as soon as possible. An announcement on the Flint water plan was expected Thursday.

Sara Wurfel, a spokeswoman for Snyder, said the recommendation Wednesday “is an option we’re helping thoroughly review and consider with the city, and the technical advisory committee’s work is much appreciated in this matter. We’re also focused on working hard in collaboration with all and implementing the key action steps outlined on Oct. 2 to help protect public health and ensure safe, accessible drinking water for Flint residents.”

Since 2014, the Genesee County city has drawn its drinking water from the Flint River, which has led to major problems for residents.

Last month, the city issued an advisory about its drinking water after concerns surfaced about lead contamination.

On Tuesday, Snyder's administration made free water filters available for residents.

Meanwhile, Uber drivers began collecting donations of bottled water for Flint schools. And Mayor Dayne Walling this week said he gave to Flint Community Schools some 19 palettes Kroger grocers donated.

Uber, others join in efforts to pour clean water into Flint

By Jiquanda Johnson | jjohns16@mlive.com The Flint Journal Follow on Twitter on October 08, 2015 at 5:00 AM, updated October 08, 2015 at 5:06 AM

FLINT, MI -- Businesses, charities and individuals have donated thousands of bottles of water to city of Flint residents and students since last year after controversy erupted over the quality of the city's water. Here is a list of some of the donors.

•□□□□□□□□ The United Way of Genesee County has actively participated in looking at ways to ease water woes in the city of Flint.

•□□□□□□□□ ZeroWater partnered with United Way and Flint Community Schools early October to bring water filters to the school district as a solution instead of having students drink bottled water.

•□□□□□□□□ Uber announced on Oct. 6 that drivers in Detroit will pick up donated bottles of water to bring to Flint throughout the week. People in Detroit just have to use their Uber link to notify drivers that water needs to be picked up. The initiative runs from 2 to 7 p.m. from Oct. 6 - 8.

•□□□□□□□□ There was another donation of more than 4,000 gallons of bottled water through the Flint Diaper Bank and United Way of Genesee County on Oct. 7.

•□□□□□□□□ Donations came in from Flint-area Home Depots and Sam's Club after Hurley Medical Center doctors revealed that lead levels in children in Flint had elevated after the city switched from Detroit's water source to the Flint River.

•□□□□□□□□ Mott Community College issued an Oct. 7 media release saying they are donating bottled water to Pierce Elementary School on the city's north side on Oct. 8.

•□□□□□□□□ Swan Valley High School in Saginaw is collecting bottled water to send to Flint Public Schools. The bottled water drive ends Oct. 9 and school officials are hoping to drop donations off to Flint Community Schools on Oct. 9.

•□□□□□□□□ Bendle High School sophomore Chase Harrison raised money to purchase bottled water for Flint Community Schools.

•□□□□□□□□ Lavish Living, a Flint-based organization, has donated at least 200 cases of water to Flint Community Schools. As of Oct. 6 the organization was still working to collect more water for students.

•□□□□□□□□ The Flint Northwestern football team delivered an estimated 40 cases of water on Oct. 5 to Flint area residents between Dupont, Clio, Carpenter and Pierson roads.

•□□□□□□□□ General Motors Foundation

•□□□□□□□□ In January, Sargent Title Co. collected about 600 cases of water to donated to Flint residents.

•□□□□□□□□ Absopure Water Corp. donated a semi-truck worth of bottled water to Flint residents in January.

•□□□□□□□□ 1st Congregational United Church of Christ in Kalamazoo donated 4,000 bottles of water in September.

•□□□□□□□□ Al Serra Auto Plaza announced Oct. 7 that they will serve as drop off location for bottled water donations. If donors give 12 or more bottles of water, the dealership is offering free tire rotation.

•□□□□□□□□ In March, members of the Michigan National Action Network provided an estimated 10,000 bottles of water to Flint residents.

•□□□□□□□□ District leaders also expect at least 1,000 cases of bottled water to arrive at the Food Bank on Wednesday, Oct. 7, from the Saginaw Chippewa Indian Tribe and Soaring Eagle Waterpark and Hotel and Soaring Eagle Casino and Resort.

The Flint Journal will do updates as more donor names are provided. If anyone has donor information make a note of it in the comments section of this post, or email The Flint Journal at flnews@mlive.com.

Flint water crisis a bitter indictment of dysfunctional emergency manager

By Curt Guyette, Special to The Michigan Chronicle

Stark evidence of how terribly bad things can go when democracy is dismantled can be found in the elevated levels of lead in the children of Flint.

Because of decisions made by an appointed emergency manager, the tragically high costs of trying to balance a budget by switching to an unsafe water source will be borne by kids now forced to struggle with lower IQs, behavioral problems, learning disabilities, and a host of other ill effects.

This is what can happen when people are denied full access to representative government; they get poisoned by appointees with no connection to the community. Under Michigan's emergency manager law – PA 436 — gubernatorial appointees can leave town claiming to have successfully solved a fiscal crisis when in fact what they leave in their wake is a catastrophe of monumental proportions.

In recent days, as the lead problems in Flint have made international news, former Flint emergency manager Darnell Earley – the man in charge when the switch to the Flint River was made, and who is now overseeing the education of the children in Detroit Public Schools – has tried to deny any responsibility for the catastrophe.

According to the Detroit Free Press, Earley claimed in an e-mailed statement "that he was not involved in the decision to use river water."

The governor's office and Earley can rightfully claim that the Flint mayor and City Council initially gave their blessing to the switch made 18 months ago. But that fig leaf provides little real cover for the state officials now trying to run away from their disastrous decision.

For starters, it doesn't matter what the mayor and City Council had to say when the decision was made. The emergency manager, under the sweeping powers granted under Public Act 436, had complete authority to make the switch regardless of what Flint's elected officials wanted.

Moreover, those officials were in essence working for the emergency manager, not the people who elected them. The EM decided how much pay the mayor and council members drew, and how much power they could wield.

How do things go when appointed officials try to buck the control of an EM? As we've seen in Benton Harbor and Detroit Public Schools, the answer is that they get denuded of all power and are completely marginalized.

The message to elected officials under state control has been made perfectly clear: play ball with the EM, or else.

But there is another problem with the EM law as well, one made painfully obvious in Flint. In a normally-functioning democracy, when it came time for a city of Flint to conduct tests to show it is in compliance with federal drinking water regulations, the city would be an independent actor with the Michigan Department of Environmental Quality (MDEQ) serving as a separate check on the system, another independent actor providing oversight to make sure the job is done correctly.

Instead, with Governor Rick Snyder's man being the one in charge when the decision was made to start using river water – a decision that was almost instantly revealed to be fraught with problems – the MDEQ, instead of being a watchdog protecting the citizens of Flint, served as a collaborator, working with the city to do everything in their power to skew results so that their tests would make it appear that the water was safe when it wasn't.

How do we know it wasn't safe? Because grassroots citizen groups worked with researchers at Virginia Tech and the ACLU of Michigan to conduct an independent test of nearly 300 city homes and found that the problem was far worse than the city and state claimed.

When those results were released in mid-September, the response by the state was to try and discredit them. The same was true a week later, when a Hurley Children's Hospital study found the number of children with elevated lead levels doubled after the switch to the Flint River was made.

Those two studies, and the host of problems with the state and city's water testing, last week prompted the ACLU of Michigan, the Natural Resources Defense Council, and an array of civic groups to file a petition with the U.S. EPA, calling upon the federal government to come in and provide the oversight necessary to ensure Flint's water is clean and safe.

Finally, after the state's own data confirmed those findings, and Genesee County officials took the drastic step of declaring a public health emergency, the governor and MDEQ were forced to finally admit the truth and started taking some action.

But even if those measures are enough – and they may well not be, failing as they do to require a switch back to the much cleaner and far less corrosive Detroit system – the damage already caused by this governor and his emergency managers is irreversible for the children who will struggle for the rest of their lives because of the decisions made while Flint was under state control and democracy was suspended.

Subject: Notes from Governor's Flint announcement

Rough notes from the first two speakers … more to come. DEQ up next.

Gov. Snyder:

- Thanking the Mott Foundation … follow up on what we did last week. Continuing to do last week's actions, but some additional action steps we're looking to tangibly take

- Tech advisory committee made a recommendation about switching to Great Lakes Water Authority / Detroit … "I'm in full support of a return to the GLWA" … I support the mayor in his desire to move in that direction

- We believe it will be better for public safety … some financial issues … about a $12 million incremental cost. Will recommend to legislature to provide $6 million toward that cost. Mott Foundation will kick in $4 million. Flint will find $2 million.

- <video froze>

- Asking for $4 million to continue with what was discussed last week … testing, water filters, people for analysis and work, including lead education

- U.S. EPA has been excellent to work with

Dayne Walling:

- City has decided to switch back to Detroit water … fastest way to protect public health and stabilize Flint's water system.

- City is already working diligently to make the reconnection … discussion around optimal corrosion control has already started

- Monday 2 p.m. press briefing

- EPA technical assistance will be involved from the beginning so best practices will be in place

•□□□□□□□□ Reconnecting to Detroit is a major step toward safe water, but rehab project will take more time and money. State and EPA working with city on immediate and long term steps.

•□□□□□□□□ Lead service lines need to be replaced

•□□□□□□□□ Important lessons from Flint's experience … need to look at state and federal water rules, etc.

Gov. Snyder says he'll make announcement on Flint water Thursday

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 07, 2015 at 9:45 PM, updated October 08, 2015 at 8:08 AM

FLINT, MI -- Gov. Rick Snyder says on Twitter that he will make an announcement about Flint water at 10 a.m. Thursday.

The planned announcement comes less than 24 hours after Flint's Technical Advisory Committee recommended the city end its use of the Flint River as its water source.

Since making the switch from using pre-treated Lake Huron water from the city of Detroit to treating river water at its own plant in April 2014, Flint officials have struggled to maintain the quality and safety of water delivered to city residents.

Snyder's Twitter message says, "Watch live tomorrow at 10 a.m. as I make an announcement regarding Flint water" at mi.gov/SnyderLive.

The state's Web site says the governor will be joined by Flint Mayor Dayne Walling, other state officials, and Ridgway White of the Charles Stewart Mott Foundation.

High levels of lead in city water and in the blood of children and infants since the city changed its water source have triggered a public health emergency here, including the mass distribution of lead-clearing faucet filters and bottled water.

Researchers from Virginia Tech university say river water has proven to be far more corrosive than water from the Detroit Water and Sewerage Department, causing lead to leach into homes that have lead service lines.

Flint City Administrator Natasha Henderson said today, Oct. 7, that she believes the position of state officials has been shifting on continued use of the Flint River, a change that was made while Flint was being run by a state-appointed emergency manager.

"We're to the point that the state believes this is a public health emergency," Henderson told the City Council. "From what I see, the state is working very well with us."

The city administrator is among officials who have advocated for a return to buying water from the DWSD since a study was released last month by Hurley Medical Center's director of pediatric residency program.

The study showed the percentage of Flint infants and children with above average lead levels has nearly doubled citywide since the switch to river water, and has nearly tripled among children in "high risk" areas of lead exposure.

Governor plans 10 a.m. announcement on troubled Flint water system

FLINT (AP) — Gov. Rick Snyder plans an announcement about the water system in Flint, which is facing a public health emergency over lead in its water.

A posting on the state's website says Snyder on Thursday morning will be joined for the announcement by officials including Flint Mayor Dayne Walling, state Department of Environmental Quality Director Dan Wyant and state Department of Health and Human Services Director Nick Lyon.

The announcement comes a day after a committee of local experts in health, water and science recommended Flint reconnect to Detroit's water system while it awaits a new pipeline to Lake Huron.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. State government and nonprofit groups are distributing filters and bottled water to Flint homes and schools.

Snyder's announcement can be viewed live at 10 a.m. Thursday, Oct. 8 by visiting http://1.usa.gov/1QapVxk

Flint Officials Are No Longer Saying the Water Is Fine

By MONICA DAVEY, New York Times, OCT. 7, 2015

FLINT, Mich. — All along, through months of complaints from residents of this city about the peculiar colors and odors they said were coming from their faucets, the overriding message from the authorities here was that the water would be just fine.

Yes, there had been a boil order when fecal coliform bacteria turned up in some neighborhoods last year. And yes, the extra chlorine that was pumped in to solve that problem seemed to create another one — increased levels of a different contaminant.

Still, the guidance from Flint officials about the temporary water supply they switched to in 2014 — partly to save money — sounded assuring. In a notice sent to residents in July, city officials declared: "This is not an emergency. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours."

The soothing talk has vanished. In recent weeks, testing has shown increased levels of lead in the blood of some Flint children — and health officials pointed to the water as a possible source.

First, the city advised residents to run their water for five minutes before using it, to use only cold water for drinking and cooking, and to install lead-removing water filters. Then county officials issued an emergency advisory recommending that people not drink Flint's water unless it is tested for lead or filtered.

And last Friday, after corroborating that lead levels had risen in some children, state officials called for the water to be tested at all Flint public schools and for stepped-up efforts to replace lead service lines; they also promised $1 million to provide filters.

Officials met here on Wednesday afternoon, and talks were underway, officials said, for additional solutions that could come as early as Thursday. Gov. Rick Snyder said on Twitter late Wednesday that he planned to make an announcement about the situation on Thursday morning.

Private groups have raced to donate bottled water to schools, where the water fountains are now shut off, as well as filters to families who cannot afford them. Saying “we’re just in a heck of a bind,” Robert J. Pickell, the Genesee County sheriff, began serving bottled water and food that need not be cooked in water to hundreds of inmates in the county jail. Some residents have begun washing their children and pets with bottled water.

And Flint’s mayor, Dayne Walling, who had attended a 2014 event to celebrate the switch to the new water supply, called for returning to the city’s old water supply and urged state officials to provide millions of dollars to help pay for it.

The contaminated water was just the latest blow to Flint, an economically battered city that has struggled for years with factory closings, job losses and population decline.

Along Saginaw Street downtown, where at least one business had an “un-leaded” sign posted by a jug of water, residents had lingering questions: Would filters really do enough to make the water safe? What about unfiltered showers? Could they rely on the water at work and at restaurants? And why had it taken so long for leaders to figure out that there was a problem?

“I don’t think people know what’s going on at all,” said Chris Thornton, 49, who described the first blast of water from his faucets some days as looking like urine, smelling like bleach and tasting of metal. After his wife, Ronda, 50, felt sick to her stomach for months, the Thorntons began buying jugs of bottled water, though the price — on top of an already steep water bill — has been overwhelming.

“As far as my family,” Ronda Thornton said, “we’ve just given up on the city’s water.”

Flint’s water problems are tied inextricably to its fiscal woes. In 1960, nearly 200,000 people lived here. But auto plants closed, and the population has dropped by half. By 2011, Flint’s shrunken tax base and seemingly intractable budget problems prompted Mr. Snyder to appoint an emergency manager for the city. Over the next four years, the city had four managers overseeing operations. Along the way, the city switched its water supply.

For decades, the city bought water from Detroit, which treated water from Lake Huron, then piped it here, 70 miles to the northwest. But with the costs mounting, Flint's leaders decided they could save millions by joining a new regional authority that would draw and treat its own water from Lake Huron.

There was one complication: Flint needed an alternative water supply from April 2014 until the new regional system is ready, probably next year. In the interim, Flint switched to using water from the Flint River, which state officials say had been a backup source in the past.

Ask residents about the Flint River, and many of them roll their eyes. They say it was once as a dumping ground for car parts, grocery carts and refrigerators. There have been significant improvements and intensive restoration campaigns in recent years, though a Flint River Fest set for Friday has been postponed, organizers said, given the "current drinking water crisis."

Even now, state officials say that treated Flint River water is safe and capable of meeting state and federal standards. Officials say the problem may be that some of the aging pipes and service lines that carry water into Flint's homes and businesses contain lead and are being corroded by water. The water Flint used to receive from Detroit was treated with chemicals intended to prevent such corrosion.

For months, questions about lead and other risks multiplied. "Everyone kept saying: 'It's safe! It's safe! It's safe!' " recalled Melissa Mays, a Flint resident who says she was sickened by the water and has helped organize residents over the issue.

Then in September, a researcher from Virginia Tech released findings from the water in hundreds of Flint homes showing elevated lead levels. Blood tests released by a local pediatrician — and corroborated last week by state officials analyzing their own testing — showed an increase in lead levels in children in some neighborhoods since 2014, when the city began drawing water from the river.

“We all have a concern about Flint’s drinking water in terms of what we’re seeing in terms of lead,” Mr. Snyder said last week.

Mr. Walling said that the move to river water occurred when an emergency manager controlled the city, though the City Council did vote for the city’s plans for a new, regional water system. He acknowledged supporting the move in a state of the city address, but said that he had not been given sufficient information about the safety risks.

“I had to work with what I knew at the time,” Mr. Walling, who is up for election next month, said in an interview.

But for many residents, the authorities failed the city by taking so long to react. “Anytime you have to weigh money against the health and welfare of people, it always has to be the health and welfare you go with,” said the Rev. Alfred Harris, a local pastor who has stopped conducting baptisms at his church because of concerns about the water. “We’ve been talking about this for the last 14 months, and they did not give a sincere ear to any of us. Shame on you!”

LeeAnne Walters said her son, Gavin, 4, who has immune system issues, had suffered direct consequences. After the switch to river water, which sometimes looked brown in their house, Gavin dropped to 27 pounds, far below the weight of his twin brother, she said. He sometimes seemed unable to pronounce words he knew, she said, and then test results showed an elevated lead level in his blood.

“He is going to deal with the side effects of this for the rest of his life,” Ms. Walters said. “I don’t think there’s a word angry enough to describe my anger. I trusted the city, and I helped the city poison my kid. Who thought this could happen in the United States?”

Waiting for answers, action in Flint water crisis

By Nancy Kaffer, Detroit Free Press Columnist 10:27 p.m. EDT October 7, 2015

They are still waiting for answers about the water in Flint.

And it's hard to say when, or if, those answers are coming.

It has been two weeks since a hospital researcher found that more Flint kids had been lead poisoned since the city switched its municipal water supply. And it has been nearly a week since the State of Michigan abruptly changed its posture, acknowledging, after months of denial and empty assurances, that Flint's water supply was compromised.

Since then, a lot of folks have worked diligently to sort out how things went so badly wrong in this small, impoverished city, and what the State of Michigan is doing to fix it.

But solutions remain elusive.

The state announced Friday that it has devoted $1 million to provide water filters for Flint residents, is expanding water testing and expediting improved water treatment. But two weeks on, Flint hasn't started adding chemicals to its water that would allow it to pass safely through the city's lead service pipes. That plan can likely be ready within a week, and can be enacted as soon as it's approved by the Michigan Department of Environmental Quality. Scientists say it would take roughly a month before those chemicals would begin to effect Flint's drinking water.

That would be the right play, unless the city opts to rejoin the Detroit Water and Sewerage Department -- as water experts have recommended -- a decision that would likely require financial assistance from the State of Michigan but could result in potable water flowing from Flint taps within two weeks. Is it likely to happen? Your guess is as good as mine.

And state officials continue to insist that the rules designed to monitor water systems, to ensure safe drinking water, worked as they're supposed to.

Kids in danger

The effects of lead on children are irreversible. Lead-poisoned kids can experience a host of behavioral and developmental problems, and in two Flint ZIP codes, the percentage of children affected by lead has doubled, reversing a long trend of improving rates.

That's because in 2014, Flint decided to pump untreated water from the Flint River, ending a decades-long relationship with the Detroit Water and Sewerage Department, while a new regional water authority it's joining is under construction. Since then, Flint's been treating its water locally, prompting a rash of problems related to coliform bacteria, a disinfectant and its byproduct, and now, elevated lead.

Both of these decisions were made while Flint was under state oversight, during the appointments of a series of emergency managers appointed by and answerable to Gov. Rick Snyder. The Michigan Department of Environmental Quality, whose director is appointed by the governor, must ensure that water systems are producing safe drinking water. Because Flint's water decisions were made under Snyder's emergency managers, the governor's decision-making authority is one step closer to Flint's water crisis.

The water Flint bought from Detroit was "finished," in other words, safe for humans to drink, but also treated to create a film inside those pipes that kept the lead out. That's called "corrosion control," and Detroit achieved this goal by adding phosphates to the water it pumps from Lake Huron.

Flint doesn't.

It took an unreasonably long time to get a solid answer to this question.

Corrosion control

Since April 2014, treatment at Flint's plant has included adding lime to the water it distributed to customers, largely to make the water less acidic, Liane Shekter Smith, chief of the MDEQ's office of drinking water and municipal assistance, said Tuesday.

"There was no corrosion control plan put forward at the time of the switch," Shekter Smith said. "There was a belief that (acidity) adjustment would provide adequate corrosion control, and that rounds of testing would confirm or refute that."

Any new water supply must be tested at six-month intervals to determine whether it meets the guidelines of the federal lead and copper rule, a standard established by the U.S. Environmental Protection Agency.

Tests of Flint's drinking water showed roughly 6 parts per billion (how the presence of lead in water is reckoned) in water sampled between June and December of 2014, said MDEQ spokesman Brad Wurfel. The U.S. Centers for Disease Control and Prevention said there is no acceptable level of lead exposure, but 6 ppb would, in some cases, fall below the EPA's actionable level of 15 ppb.

But because the community Flint serves is so large, it must meet a different threshold, 5 ppb. If a second round of testing showed that lead levels continued to exceed it, Flint would be required to improve its method of corrosion control.

Water sampled between January and June of 2015 showed an alarming increase: lead levels had risen to 11 ppb.

That kind of testing, Shekter Smith said, is the most reliable way to determine whether corrosion control is working.

"Having it in place is best way to know what is happening out in the system," she said.

Given the elevated blood-lead levels in Flint kids, the damage lead can cause, and the permanence of that damage, is that enough?

"I think that we are following the protocol," she said, "and the protocol got us to the right place, and we're making the right decisions."

“It did?" said Erik Olson, a senior strategy director for the Washington, D.C.-based Natural Resources Defense Council. "It didn’t sound like it."

Because the composition of water varies so greatly, there's no one right way to do corrosion control, Olson said. But Flint's plan to use lime only should have prompted questions before switching to Flint River water.

"They definitely should have said, 'OK, what’s the basis of that decision? What’s your engineering study that shows that that’s optimizing your corrosion control?' " Olson said.

That Flint's river water would pass through pipes with lead components shouldn't have been surprising, Olson said -- the presence of lead in the water and sewage infrastructure is well-documented, and well-known.

So why didn't Flint's engineers account for that, when developing a treatment plan? That's just one of the questions I still can't answer.

---

http://www.detroitnews.com/story/news/local/michigan/2015/10/08/flint-health-experts-support-detroit-water-reconnection/73568654/

Flint health experts support Detroit water reconnection

Detroit News Staff and wire reports 7:58 a.m. EDT October 8, 2015

Flint — A committee of local experts in health, water and science has recommended that Flint reconnect to Detroit's water system.

Flint administrator Natasha Henderson urged the committee to not think about cost and decide "what's in the best interest" for Flint, which has a water crisis due to elevated levels of lead in children.

The Technical Advisory Committee met Wednesday. It rarely meets, but state officials say it will have a role in Flint's water quality. The committee has no formal role in deciding whether Flint stops using the Flint River for water.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. A Virginia Tech researcher says there would be dramatic reductions in about a month if the Detroit water system is used.

Gov. Rick Snyder's administration last week said it was considering temporarily reconnecting Flint to Detroit's water system temporarily in a bid to tackle the ongoing water quality and lead issues. The state also planned to expedite construction of a new water line to Lake Huron so a planned water authority that would service Flint could operate as soon as possible. An announcement on the Flint water plan was expected Thursday.

Sara Wurfel, a spokeswoman for Snyder, said the recommendation Wednesday "is an option we're helping thoroughly review and consider with the city, and the technical advisory committee's work is much appreciated in this matter. We're also focused on working hard in collaboration with all and implementing the key action steps outlined on Oct. 2 to help protect public health and ensure safe, accessible drinking water for Flint residents."

Since 2014, the Genesee County city has drawn its drinking water from the Flint River, which has led to major problems for residents.

Last month, the city issued an advisory about its drinking water after concerns surfaced about lead contamination.

On Tuesday, Snyder's administration made free water filters available for residents.

Meanwhile, Uber drivers began collecting donations of bottled water for Flint schools. And Mayor Dayne Walling this week said he gave to Flint Community Schools some 19 palettes Kroger grocers donated.

Uber, others join in efforts to pour clean water into Flint

By Jiquanda Johnson | jjohns16@mlive.com The Flint Journal Follow on Twitter on October 08, 2015 at 5:00 AM, updated October 08, 2015 at 5:06 AM

FLINT, MI -- Businesses, charities and individuals have donated thousands of bottles of water to city of Flint residents and students since last year after controversy erupted over the quality of the city's water. Here is a list of some of the donors.

- The United Way of Genesee County has actively participated in looking at ways to ease water woes in the city of Flint.

- ZeroWater partnered with United Way and Flint Community Schools early October to bring water filters to the school district as a solution instead of having students drink bottled water.

- Uber announced on Oct. 6 that drivers in Detroit will pick up donated bottles of water to bring to Flint throughout the week. People in Detroit just have to use their Uber link to notify drivers that water needs to be picked up. The initiative runs from 2 to 7 p.m. from Oct. 6 - 8.

- There was another donation of more than 4,000 gallons of bottled water through the Flint Diaper Bank and United Way of Genesee County on Oct. 7.

- Donations came in from Flint-area Home Depots and Sam's Club after Hurley Medical Center doctors revealed that lead levels in children in Flint had elevated after the city switched from Detroit's water source to the Flint River.

- Mott Community College issued an Oct. 7 media release saying they are donating bottled water to Pierce Elementary School on the city's north side on Oct. 8.

- Swan Valley High School in Saginaw is collecting bottled water to send to Flint Public Schools. The bottled water drive ends Oct. 9 and school officials are hoping to drop donations off to Flint Community Schools on Oct. 9.

•□□□□□□□□ Bendle High School sophomore Chase Harrison raised money to purchase bottled water for Flint Community Schools.

•□□□□□□□□ Lavish Living, a Flint-based organization, has donated at least 200 cases of water to Flint Community Schools. As of Oct. 6 the organization was still working to collect more water for students.

•□□□□□□□□ The Flint Northwestern football team delivered an estimated 40 cases of water on Oct. 5 to Flint area residents between Dupont, Clio, Carpenter and Pierson roads.

•□□□□□□□□ General Motors Foundation

•□□□□□□□□ In January, Sargent Title Co. collected about 600 cases of water to donated to Flint residents.

•□□□□□□□□ Absopure Water Corp. donated a semi-truck worth of bottled water to Flint residents in January.

•□□□□□□□□ 1st Congregational United Church of Christ in Kalamazoo donated 4,000 bottles of water in September.

•□□□□□□□□ Al Serra Auto Plaza announced Oct. 7 that they will serve as drop off location for bottled water donations. If donors give 12 or more bottles of water, the dealership is offering free tire rotation.

•□□□□□□□□ In March, members of the Michigan National Action Network provided an estimated 10,000 bottles of water to Flint residents.

•□□□□□□□□ District leaders also expect at least 1,000 cases of bottled water to arrive at the Food Bank on Wednesday, Oct. 7, from the Saginaw Chippewa Indian Tribe and Soaring Eagle Waterpark and Hotel and Soaring Eagle Casino and Resort.

The Flint Journal will do updates as more donor names are provided. If anyone has donor information make a note of it in the comments section of this post, or email The Flint Journal at flnews@mlive.com.

http://michronicleonline.com/2015/10/07/flint-water-crisis-a-bitter-indictment-of-dysfunctional-emergency-manager/

Flint water crisis a bitter indictment of dysfunctional emergency manager

By Curt Guyette, Special to The Michigan Chronicle

Stark evidence of how terribly bad things can go when democracy is dismantled can be found in the elevated levels of lead in the children of Flint.

Because of decisions made by an appointed emergency manager, the tragically high costs of trying to balance a budget by switching to an unsafe water source will be borne by kids now forced to struggle with lower IQs, behavioral problems, learning disabilities, and a host of other ill effects.

This is what can happen when people are denied full access to representative government; they get poisoned by appointees with no connection to the community. Under Michigan's emergency manager law – PA 436 — gubernatorial appointees can leave town claiming to have successfully solved a fiscal crisis when in fact what they leave in their wake is a catastrophe of monumental proportions.

In recent days, as the lead problems in Flint have made international news, former Flint emergency manager Darnell Earley – the man in charge when the switch to the Flint River was made, and who is now overseeing the education of the children in Detroit Public Schools – has tried to deny any responsibility for the catastrophe.

According to the Detroit Free Press, Earley claimed in an e-mailed statement "that he was not involved in the decision to use river water."

The governor's office and Earley can rightfully claim that the Flint mayor and City Council initially gave their blessing to the switch made 18 months ago. But that fig leaf provides little real cover for the state officials now trying to run away from their disastrous decision.

For starters, it doesn't matter what the mayor and City Council had to say when the decision was made. The emergency manager, under the sweeping powers granted under Public Act 436, had complete authority to make the switch regardless of what Flint's elected officials wanted.

Moreover, those officials were in essence working for the emergency manager, not the people who elected them. The EM decided how much pay the mayor and council members drew, and how much power they could wield.

How do things go when appointed officials try to buck the control of an EM? As we've seen in Benton Harbor and Detroit Public Schools, the answer is that they get denuded of all power and are completely marginalized.

The message to elected officials under state control has been made perfectly clear: play ball with the EM, or else.

But there is another problem with the EM law as well, one made painfully obvious in Flint. In a normally-functioning democracy, when it came time for a city of Flint to conduct tests to show it is in compliance with federal drinking water regulations, the city would be an independent actor with the Michigan Department of Environmental Quality (MDEQ) serving as a separate check on the system, another independent actor providing oversight to make sure the job is done correctly.

Instead, with Governor Rick Snyder's man being the one in charge when the decision was made to start using river water – a decision that was almost instantly revealed to be fraught with problems – the MDEQ, instead of being a watchdog protecting the citizens of Flint, served as a collaborator, working with the city to do everything in their power to skew results so that their tests would make it appear that the water was safe when it wasn't.

How do we know it wasn't safe? Because grassroots citizen groups worked with researchers at Virginia Tech and the ACLU of Michigan to conduct an independent test of nearly 300 city homes and found that the problem was far worse than the city and state claimed.

When those results were released in mid-September, the response by the state was to try and discredit them. The same was true a week later, when a Hurley Children's Hospital study found the number of children with elevated lead levels doubled after the switch to the Flint River was made.

Those two studies, and the host of problems with the state and city's water testing, last week prompted the ACLU of Michigan, the Natural Resources Defense Council, and an array of civic groups to file a petition with the U.S. EPA, calling upon the federal government to come in and provide the oversight necessary to ensure Flint's water is clean and safe.

Finally, after the state's own data confirmed those findings, and Genesee County officials took the drastic step of declaring a public health emergency, the governor and MDEQ were forced to finally admit the truth and started taking some action.

But even if those measures are enough – and they may well not be, failing as they do to require a switch back to the much cleaner and far less corrosive Detroit system – the damage already caused by this governor and his emergency managers is irreversible for the children who will struggle for the rest of their lives because of the decisions made while Flint was under state control and democracy was suspended.

Gov. Snyder says he'll make announcement on Flint water Thursday

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 07, 2015 at 9:45 PM, updated October 08, 2015 at 8:08 AM

FLINT, MI -- Gov. Rick Snyder says on Twitter that he will make an announcement about Flint water at 10 a.m. Thursday.

The planned announcement comes less than 24 hours after Flint's Technical Advisory Committee recommended the city end its use of the Flint River as its water source.

Since making the switch from using pre-treated Lake Huron water from the city of Detroit to treating river water at its own plant in April 2014, Flint officials have struggled to maintain the quality and safety of water delivered to city residents.

Snyder's Twitter message says, "Watch live tomorrow at 10 a.m. as I make an announcement regarding Flint water" at mi.gov/SnyderLive.

The state's Web site says the governor will be joined by Flint Mayor Dayne Walling, other state officials, and Ridgway White of the Charles Stewart Mott Foundation.

High levels of lead in city water and in the blood of children and infants since the city changed its water source have triggered a public health emergency here, including the mass distribution of lead-clearing faucet filters and bottled water.

Researchers from Virginia Tech university say river water has proven to be far more corrosive than water from the Detroit Water and Sewerage Department, causing lead to leach into homes that have lead service lines.

Flint City Administrator Natasha Henderson said today, Oct. 7, that she believes the position of state officials has been shifting on continued use of the Flint River, a change that was made while Flint was being run by a state-appointed emergency manager.

"We're to the point that the state believes this is a public health emergency," Henderson told the City Council. "From what I see, the state is working very well with us."

The city administrator is among officials who have advocated for a return to buying water from the DWSD since a study was released last month by Hurley Medical Center's director of pediatric residency program.

The study showed the percentage of Flint infants and children with above average lead levels has nearly doubled citywide since the switch to river water, and has nearly tripled among children in "high risk" areas of lead exposure.

Governor plans 10 a.m. announcement on troubled Flint water system

FLINT (AP) — Gov. Rick Snyder plans an announcement about the water system in Flint, which is facing a public health emergency over lead in its water.

A posting on the state's website says Snyder on Thursday morning will be joined for the announcement by officials including Flint Mayor Dayne Walling, state Department of Environmental Quality Director Dan Wyant and state Department of Health and Human Services Director Nick Lyon.

The announcement comes a day after a committee of local experts in health, water and science recommended Flint reconnect to Detroit's water system while it awaits a new pipeline to Lake Huron.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. State government and nonprofit groups are distributing filters and bottled water to Flint homes and schools.

Snyder's announcement can be viewed live at 10 a.m. Thursday, Oct. 8 by visiting http://1.usa.gov/1QapVxk

Flint Officials Are No Longer Saying the Water Is Fine

By MONICA DAVEY, New York Times, OCT. 7, 2015

FLINT, Mich. — All along, through months of complaints from residents of this city about the peculiar colors and odors they said were coming from their faucets, the overriding message from the authorities here was that the water would be just fine.

Yes, there had been a boil order when fecal coliform bacteria turned up in some neighborhoods last year. And yes, the extra chlorine that was pumped in to solve that problem seemed to create another one — increased levels of a different contaminant.

Still, the guidance from Flint officials about the temporary water supply they switched to in 2014 — partly to save money — sounded assuring. In a notice sent to residents in July, city officials declared: “This is not an emergency. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours.”

The soothing talk has vanished. In recent weeks, testing has shown increased levels of lead in the blood of some Flint children — and health officials pointed to the water as a possible source.

First, the city advised residents to run their water for five minutes before using it, to use only cold water for drinking and cooking, and to install lead-removing water filters. Then county officials issued an emergency advisory recommending that people not drink Flint's water unless it is tested for lead or filtered.

And last Friday, after corroborating that lead levels had risen in some children, state officials called for the water to be tested at all Flint public schools and for stepped-up efforts to replace lead service lines; they also promised $1 million to provide filters.

Officials met here on Wednesday afternoon, and talks were underway, officials said, for additional solutions that could come as early as Thursday. Gov. Rick Snyder said on Twitter late Wednesday that he planned to make an announcement about the situation on Thursday morning.

Private groups have raced to donate bottled water to schools, where the water fountains are now shut off, as well as filters to families who cannot afford them. Saying "we're just in a heck of a bind," Robert J. Pickell, the Genesee County sheriff, began serving bottled water and food that need not be cooked in water to hundreds of inmates in the county jail. Some residents have begun washing their children and pets with bottled water.

And Flint's mayor, Dayne Walling, who had attended a 2014 event to celebrate the switch to the new water supply, called for returning to the city's old water supply and urged state officials to provide millions of dollars to help pay for it.

The contaminated water was just the latest blow to Flint, an economically battered city that has struggled for years with factory closings, job losses and population decline.

Along Saginaw Street downtown, where at least one business had an "un-leaded" sign posted by a jug of water, residents had lingering questions: Would filters really do enough to make the water safe? What about unfiltered showers? Could they rely on the water at work and at restaurants? And why had it taken so long for leaders to figure out that there was a problem?

"I don't think people know what's going on at all," said Chris Thornton, 49, who described the first blast of water from his faucets some days as looking like urine, smelling like bleach and tasting of metal. After his wife, Ronda, 50, felt sick to her stomach for months, the Thorntons began buying jugs of bottled water, though the price — on top of an already steep water bill — has been overwhelming.

"As far as my family," Ronda Thornton said, "we've just given up on the city's water."

Flint's water problems are tied inextricably to its fiscal woes. In 1960, nearly 200,000 people lived here. But auto plants closed, and the population has dropped by half. By 2011, Flint's shrunken tax base and seemingly intractable budget problems prompted Mr. Snyder to appoint an emergency manager for the city. Over the next four years, the city had four managers overseeing operations. Along the way, the city switched its water supply.

For decades, the city bought water from Detroit, which treated water from Lake Huron, then piped it here, 70 miles to the northwest. But with the costs mounting, Flint's leaders decided they could save millions by joining a new regional authority that would draw and treat its own water from Lake Huron.

There was one complication: Flint needed an alternative water supply from April 2014 until the new regional system is ready, probably next year. In the interim, Flint switched to using water from the Flint River, which state officials say had been a backup source in the past.

Ask residents about the Flint River, and many of them roll their eyes. They say it was once as a dumping ground for car parts, grocery carts and refrigerators. There have been significant improvements and intensive restoration campaigns in recent years, though a Flint River Fest set for Friday has been postponed, organizers said, given the "current drinking water crisis."

Even now, state officials say that treated Flint River water is safe and capable of meeting state and federal standards. Officials say the problem may be that some of the aging pipes and service lines that carry water into Flint's homes and businesses contain lead and are being corroded by water. The water Flint used to receive from Detroit was treated with chemicals intended to prevent such corrosion.

For months, questions about lead and other risks multiplied. "Everyone kept saying: 'It's safe! It's safe! It's safe!' " recalled Melissa Mays, a Flint resident who says she was sickened by the water and has helped organize residents over the issue.

Then in September, a researcher from Virginia Tech released findings from the water in hundreds of Flint homes showing elevated lead levels. Blood tests released by a local pediatrician — and corroborated last week by state officials analyzing their own testing — showed an increase in lead levels in children in some neighborhoods since 2014, when the city began drawing water from the river.

"We all have a concern about Flint's drinking water in terms of what we're seeing in terms of lead," Mr. Snyder said last week.

Mr. Walling said that the move to river water occurred when an emergency manager controlled the city, though the City Council did vote for the city's plans for a new, regional water system. He acknowledged supporting the move in a state of the city address, but said that he had not been given sufficient information about the safety risks.

"I had to work with what I knew at the time," Mr. Walling, who is up for election next month, said in an interview.

But for many residents, the authorities failed the city by taking so long to react. “Anytime you have to weigh money against the health and welfare of people, it always has to be the health and welfare you go with,” said the Rev. Alfred Harris, a local pastor who has stopped conducting baptisms at his church because of concerns about the water. “We’ve been talking about this for the last 14 months, and they did not give a sincere ear to any of us. Shame on you!”

LeeAnne Walters said her son, Gavin, 4, who has immune system issues, had suffered direct consequences. After the switch to river water, which sometimes looked brown in their house, Gavin dropped to 27 pounds, far below the weight of his twin brother, she said. He sometimes seemed unable to pronounce words he knew, she said, and then test results showed an elevated lead level in his blood.

“He is going to deal with the side effects of this for the rest of his life,” Ms. Walters said. “I don’t think there’s a word angry enough to describe my anger. I trusted the city, and I helped the city poison my kid. Who thought this could happen in the United States?”

Waiting for answers, action in Flint water crisis

By Nancy Kaffer, Detroit Free Press Columnist 10:27 p.m. EDT October 7, 2015

They are still waiting for answers about the water in Flint.

And it's hard to say when, or if, those answers are coming.

It has been two weeks since a hospital researcher found that more Flint kids had been lead poisoned since the city switched its municipal water supply. And it has been nearly a week since the State of Michigan abruptly changed its posture, acknowledging, after months of denial and empty assurances, that Flint's water supply was compromised.

Since then, a lot of folks have worked diligently to sort out how things went so badly wrong in this small, impoverished city, and what the State of Michigan is doing to fix it.

But solutions remain elusive.

The state announced Friday that it has devoted $1 million to provide water filters for Flint residents, is expanding water testing and expediting improved water treatment. But two weeks on, Flint hasn't started adding chemicals to its water that would allow it to pass safely through the city's lead service pipes. That plan can likely be ready within a week, and can be enacted as soon as it's approved by the Michigan Department of Environmental Quality. Scientists say it would take roughly a month before those chemicals would begin to effect Flint's drinking water.

That would be the right play, unless the city opts to rejoin the Detroit Water and Sewerage Department -- as water experts have recommended -- a decision that would likely require financial assistance from the State of Michigan but could result in potable water flowing from Flint taps within two weeks. Is it likely to happen? Your guess is as good as mine.

And state officials continue to insist that the rules designed to monitor water systems, to ensure safe drinking water, worked as they're supposed to.

Kids in danger

The effects of lead on children are irreversible. Lead-poisoned kids can experience a host of behavioral and developmental problems, and in two Flint ZIP codes, the percentage of children affected by lead has doubled, reversing a long trend of improving rates.

That's because in 2014, Flint decided to pump untreated water from the Flint River, ending a decades-long relationship with the Detroit Water and Sewerage Department, while a new regional water authority it's joining is under construction. Since then, Flint's been treating its water locally, prompting a rash of problems related to coliform bacteria, a disinfectant and its byproduct, and now, elevated lead.

Both of these decisions were made while Flint was under state oversight, during the appointments of a series of emergency managers appointed by and answerable to Gov. Rick Snyder. The Michigan Department of Environmental Quality, whose director is appointed by the governor, must ensure that water systems are producing safe drinking water. Because Flint's water decisions were made under Snyder's emergency managers, the governor's decision-making authority is one step closer to Flint's water crisis.

The water Flint bought from Detroit was "finished," in other words, safe for humans to drink, but also treated to create a film inside those pipes that kept the lead out. That's called "corrosion control," and Detroit achieved this goal by adding phosphates to the water it pumps from Lake Huron.

Flint doesn't.

It took an unreasonably long time to get a solid answer to this question.

Corrosion control

Since April 2014, treatment at Flint's plant has included adding lime to the water it distributed to customers, largely to make the water less acidic, Liane Shekter Smith, chief of the MDEQ's office of drinking water and municipal assistance, said Tuesday.

"There was no corrosion control plan put forward at the time of the switch," Shekter Smith said. "There was a belief that (acidity) adjustment would provide adequate corrosion control, and that rounds of testing would confirm or refute that."

Any new water supply must be tested at six-month intervals to determine whether it meets the guidelines of the federal lead and copper rule, a standard established by the U.S. Environmental Protection Agency.

Tests of Flint's drinking water showed roughly 6 parts per billion (how the presence of lead in water is reckoned) in water sampled between June and December of 2014, said MDEQ spokesman Brad Wurfel. The U.S. Centers for Disease Control and Prevention said there is no acceptable level of lead exposure, but 6 ppb would, in some cases, fall below the EPA's actionable level of 15 ppb.

But because the community Flint serves is so large, it must meet a different threshold, 5 ppb. If a second round of testing showed that lead levels continued to exceed it, Flint would be required to improve its method of corrosion control.

Water sampled between January and June of 2015 showed an alarming increase: lead levels had risen to 11 ppb.

That kind of testing, Shekter Smith said, is the most reliable way to determine whether corrosion control is working.

"Having it in place is best way to know what is happening out in the system," she said.

Given the elevated blood-lead levels in Flint kids, the damage lead can cause, and the permanence of that damage, is that enough?

"I think that we are following the protocol," she said, "and the protocol got us to the right place, and we're making the right decisions."

“It did?" said Erik Olson, a senior strategy director for the Washington, D.C.-based Natural Resources Defense Council. "It didn’t sound like it."

Because the composition of water varies so greatly, there's no one right way to do corrosion control, Olson said. But Flint's plan to use lime only should have prompted questions before switching to Flint River water.

"They definitely should have said, 'OK, what’s the basis of that decision? What’s your engineering study that shows that that’s optimizing your corrosion control?' " Olson said.

That Flint's river water would pass through pipes with lead components shouldn't have been surprising, Olson said -- the presence of lead in the water and sewage infrastructure is well-documented, and well-known.

So why didn't Flint's engineers account for that, when developing a treatment plan? That's just one of the questions I still can't answer.

http://www.detroitnews.com/story/news/local/michigan/2015/10/08/flint-health-experts-support-detroit-water-reconnection/73568654/

Flint health experts support Detroit water reconnection

Detroit News Staff and wire reports 7:58 a.m. EDT October 8, 2015

Flint — A committee of local experts in health, water and science has recommended that Flint reconnect to Detroit's water system.

Flint administrator Natasha Henderson urged the committee to not think about cost and decide "what's in the best interest" for Flint, which has a water crisis due to elevated levels of lead in children.

The Technical Advisory Committee met Wednesday. It rarely meets, but state officials say it will have a role in Flint's water quality. The committee has no formal role in deciding whether Flint stops using the Flint River for water.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. A Virginia Tech researcher says there would be dramatic reductions in about a month if the Detroit water system is used.

Gov. Rick Snyder's administration last week said it was considering temporarily reconnecting Flint to Detroit's water system temporarily in a bid to tackle the ongoing water quality and lead issues. The state also planned to expedite construction of a new water line to Lake Huron so a planned water authority that would service Flint could operate as soon as possible. An announcement on the Flint water plan was expected Thursday.

Sara Wurfel, a spokeswoman for Snyder, said the recommendation

Wednesday "is an option we're helping thoroughly review and consider with the city, and the technical advisory committee's work is much appreciated in this matter. We're also focused on working hard in collaboration with all and implementing the key action steps outlined on Oct. 2 to help protect public health and ensure safe, accessible drinking water for Flint residents."

Since 2014, the Genesee County city has drawn its drinking water from the Flint River, which has led to major problems for residents.

Last month, the city issued an advisory about its drinking water after concerns surfaced about lead contamination.

On Tuesday, Snyder's administration made free water filters available for residents.

Meanwhile, Uber drivers began collecting donations of bottled water for Flint schools. And Mayor Dayne Walling this week said he gave to Flint Community Schools some 19 palettes Kroger grocers donated.

Uber, others join in efforts to pour clean water into Flint

By Jiquanda Johnson | jjohns16@mlive.com The Flint Journal Follow on Twitter on October 08, 2015 at 5:00 AM, updated October 08, 2015 at 5:06 AM

FLINT, MI -- Businesses, charities and individuals have donated thousands of bottles of water to city of Flint residents and students since last year after controversy erupted over the quality of the city's water. Here is a list of some of the donors.

- The United Way of Genesee County has actively participated in looking at ways to ease water woes in the city of Flint.

- ZeroWater partnered with United Way and Flint Community Schools early October to bring water filters to the school district as a solution instead of having students drink bottled water.

- Uber announced on Oct. 6 that drivers in Detroit will pick up donated bottles of water to bring to Flint throughout the week. People in Detroit just have to use their Uber link to notify drivers that water needs to be picked up. The initiative runs from 2 to 7 p.m. from Oct. 6 - 8.

- There was another donation of more than 4,000 gallons of bottled water through the Flint Diaper Bank and United Way of Genesee County on Oct. 7.

- Donations came in from Flint-area Home Depots and Sam's Club after Hurley Medical Center doctors revealed that lead levels in children in Flint had elevated after the city switched from Detroit's water source to the Flint River.

- Mott Community College issued an Oct. 7 media release saying they are donating bottled water to Pierce Elementary School on the city's north side on Oct. 8.

- Swan Valley High School in Saginaw is collecting bottled water to send to Flint Public Schools. The bottled water drive ends Oct. 9 and school officials are hoping to drop donations off to Flint Community Schools on Oct. 9.

- Bendle High School sophomore Chase Harrison raised money to purchase bottled water for Flint Community Schools.

- Lavish Living, a Flint-based organization, has donated at least 200 cases of water to Flint Community Schools. As of Oct. 6 the organization was still working to collect more water for students.

- The Flint Northwestern football team delivered an estimated 40 cases of water on Oct. 5 to Flint area residents between Dupont, Clio, Carpenter and Pierson roads.

•□□□□□□□□ General Motors Foundation

•□□□□□□□□ In January, Sargent Title Co. collected about 600 cases of water to donated to Flint residents.

•□□□□□□□□ Absopure Water Corp. donated a semi-truck worth of bottled water to Flint residents in January.

•□□□□□□□□ 1st Congregational United Church of Christ in Kalamazoo donated 4,000 bottles of water in September.

•□□□□□□□□ Al Serra Auto Plaza announced Oct. 7 that they will serve as drop off location for bottled water donations. If donors give 12 or more bottles of water, the dealership is offering free tire rotation.

•□□□□□□□□ In March, members of the Michigan National Action Network provided an estimated 10,000 bottles of water to Flint residents.

•□□□□□□□□ District leaders also expect at least 1,000 cases of bottled water to arrive at the Food Bank on Wednesday, Oct. 7, from the Saginaw Chippewa Indian Tribe and Soaring Eagle Waterpark and Hotel and Soaring Eagle Casino and Resort.

The Flint Journal will do updates as more donor names are provided. If anyone has donor information make a note of it in the comments section of this post, or email The Flint Journal at flnews@mlive.com.

Flint water crisis a bitter indictment of dysfunctional emergency manager

By Curt Guyette, Special to The Michigan Chronicle

Stark evidence of how terribly bad things can go when democracy is dismantled can be found in the elevated levels of lead in the children of Flint.

Because of decisions made by an appointed emergency manager, the tragically high costs of trying to balance a budget by switching to an unsafe water source will be borne by kids now forced to struggle with lower IQs, behavioral problems, learning disabilities, and a host of other ill effects.

This is what can happen when people are denied full access to representative government; they get poisoned by appointees with no connection to the community. Under Michigan's emergency manager law – PA 436 — gubernatorial appointees can leave town claiming to have successfully solved a fiscal crisis when in fact what they leave in their wake is a catastrophe of monumental proportions.

In recent days, as the lead problems in Flint have made international news, former Flint emergency manager Darnell Earley – the man in charge when the switch to the Flint River was made, and who is now overseeing the education of the children in Detroit Public Schools – has tried to deny any responsibility for the catastrophe.

According to the Detroit Free Press, Earley claimed in an e-mailed statement "that he was not involved in the decision to use river water."

The governor's office and Earley can rightfully claim that the Flint mayor and City Council initially gave their blessing to the switch made 18 months ago. But that fig leaf provides little real cover for the state officials now trying to run away from their disastrous decision.

For starters, it doesn't matter what the mayor and City Council had to say when the decision was made. The emergency manager, under the sweeping powers granted under Public Act 436, had complete authority to make the switch regardless of what Flint's elected officials wanted.

Moreover, those officials were in essence working for the emergency manager, not the people who elected them. The EM decided how much pay the mayor and council members drew, and how much power they could wield.

How do things go when appointed officials try to buck the control of an EM? As we've seen in Benton Harbor and Detroit Public Schools, the answer is that they get denuded of all power and are completely marginalized.

The message to elected officials under state control has been made perfectly clear: play ball with the EM, or else.

But there is another problem with the EM law as well, one made painfully obvious in Flint. In a normally-functioning democracy, when it came time for a city of Flint to conduct tests to show it is in compliance with federal drinking water regulations, the city would be an independent actor with the Michigan Department of Environmental Quality (MDEQ) serving as a separate check on the system, another independent actor providing oversight to make sure the job is done correctly.

Instead, with Governor Rick Snyder's man being the one in charge when the decision was made to start using river water – a decision that was almost instantly revealed to be fraught with problems – the MDEQ, instead of being a watchdog protecting the citizens of Flint, served as a collaborator, working with the city to do everything in their power to skew results so that their tests would make it appear that the water was safe when it wasn't.

How do we know it wasn't safe? Because grassroots citizen groups worked with researchers at Virginia Tech and the ACLU of Michigan to conduct an independent test of nearly 300 city homes and found that the problem was far worse than the city and state claimed.

When those results were released in mid-September, the response by the state was to try and discredit them. The same was true a week later, when a Hurley Children's Hospital study found the number of children with elevated lead levels doubled after the switch to the Flint River was made.

Those two studies, and the host of problems with the state and city's water testing, last week prompted the ACLU of Michigan, the Natural Resources Defense Council, and an array of civic groups to file a petition with the U.S. EPA, calling upon the federal government to come in and provide the oversight necessary to ensure Flint's water is clean and safe.

Finally, after the state's own data confirmed those findings, and Genesee County officials took the drastic step of declaring a public health emergency, the governor and MDEQ were forced to finally admit the truth and started taking some action.

But even if those measures are enough – and they may well not be, failing as they do to require a switch back to the much cleaner and far less corrosive Detroit system – the damage already caused by this governor and his emergency managers is irreversible for the children who will struggle for the rest of their lives because of the decisions made while Flint was under state control and democracy was suspended.

Gov. Snyder says he'll make announcement on Flint water Thursday

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 07, 2015 at 9:45 PM, updated October 08, 2015 at 8:08 AM

FLINT, MI -- Gov. Rick Snyder says on Twitter that he will make an announcement about Flint water at 10 a.m. Thursday.

The planned announcement comes less than 24 hours after Flint's Technical Advisory Committee recommended the city end its use of the Flint River as its water source.

Since making the switch from using pre-treated Lake Huron water from the city of Detroit to treating river water at its own plant in April 2014, Flint officials have struggled to maintain the quality and safety of water delivered to city residents.

Snyder's Twitter message says, "Watch live tomorrow at 10 a.m. as I make an announcement regarding Flint water" at mi.gov/SnyderLive.

The state's Web site says the governor will be joined by Flint Mayor Dayne Walling, other state officials, and Ridgway White of the Charles Stewart Mott Foundation.

High levels of lead in city water and in the blood of children and infants since the city changed its water source have triggered a public health emergency here, including the mass distribution of lead-clearing faucet filters and bottled water.

Researchers from Virginia Tech university say river water has proven to be far more corrosive than water from the Detroit Water and Sewerage Department, causing lead to leach into homes that have lead service lines.

Flint City Administrator Natasha Henderson said today, Oct. 7, that she believes the position of state officials has been shifting on continued use of the Flint River, a change that was made while Flint was being run by a state-appointed emergency manager.

"We're to the point that the state believes this is a public health emergency," Henderson told the City Council. "From what I see, the state is working very well with us."

The city administrator is among officials who have advocated for a return to buying water from the DWSD since a study was released last month by Hurley Medical Center's director of pediatric residency program.

The study showed the percentage of Flint infants and children with above average lead levels has nearly doubled citywide since the switch to river water, and has nearly tripled among children in "high risk" areas of lead exposure.

Governor plans 10 a.m. announcement on troubled Flint water system

FLINT (AP) — Gov. Rick Snyder plans an announcement about the water system in Flint, which is facing a public health emergency over lead in its water.

A posting on the state's website says Snyder on Thursday morning will be joined for the announcement by officials including Flint Mayor Dayne Walling, state Department of Environmental Quality Director Dan Wyant and state Department of Health and Human Services Director Nick Lyon.

The announcement comes a day after a committee of local experts in health, water and science recommended Flint reconnect to Detroit's water system while it awaits a new pipeline to Lake Huron.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. State government and nonprofit groups are distributing filters and bottled water to Flint homes and schools.

Snyder's announcement can be viewed live at 10 a.m. Thursday, Oct. 8 by visiting http://1.usa.gov/1QapVxk

Flint Officials Are No Longer Saying the Water Is Fine

By MONICA DAVEY, New York Times, OCT. 7, 2015

FLINT, Mich. — All along, through months of complaints from residents of this city about the peculiar colors and odors they said were coming from their faucets, the overriding message from the authorities here was that the water would be just fine.

Yes, there had been a boil order when fecal coliform bacteria turned up in some neighborhoods last year. And yes, the extra chlorine that was pumped in to solve that problem seemed to create another one — increased levels of a different contaminant.

Still, the guidance from Flint officials about the temporary water supply they switched to in 2014 — partly to save money — sounded assuring. In a notice sent to residents in July, city officials declared: “This is not an emergency. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours.”

The soothing talk has vanished. In recent weeks, testing has shown increased levels of lead in the blood of some Flint children — and health officials pointed to the water as a possible source.

First, the city advised residents to run their water for five minutes before using it, to use only cold water for drinking and cooking, and to install lead-removing water filters. Then county officials issued an emergency advisory recommending that people not drink Flint’s water unless it is tested for lead or filtered.

And last Friday, after corroborating that lead levels had risen in some children, state officials called for the water to be tested at all Flint public schools and for stepped-up efforts to replace lead service lines; they also promised $1 million to provide filters.

Officials met here on Wednesday afternoon, and talks were underway, officials said, for additional solutions that could come as early as Thursday. Gov. Rick Snyder said on Twitter late Wednesday that he planned to make an announcement about the situation on Thursday morning.

Private groups have raced to donate bottled water to schools, where the water fountains are now shut off, as well as filters to families who cannot afford them. Saying “we’re just in a heck of a bind,” Robert J. Pickell, the Genesee County sheriff, began serving bottled water and food that need not be cooked in water to hundreds of inmates in the county jail. Some residents have begun washing their children and pets with bottled water.

And Flint’s mayor, Dayne Walling, who had attended a 2014 event to celebrate the switch to the new water supply, called for returning to the city’s old water supply and urged state officials to provide millions of dollars to help pay for it.

The contaminated water was just the latest blow to Flint, an economically battered city that has struggled for years with factory closings, job losses and population decline.

Along Saginaw Street downtown, where at least one business had an “un-leaded” sign posted by a jug of water, residents had lingering questions: Would filters really do enough to make the water safe? What about unfiltered showers? Could they rely on the water at work and at restaurants? And why had it taken so long for leaders to figure out that there was a problem?

“I don’t think people know what’s going on at all,” said Chris Thornton, 49, who described the first blast of water from his faucets some days as looking like urine, smelling like bleach and tasting of metal. After his wife, Ronda, 50, felt sick to her stomach for months, the Thorntons began buying jugs of bottled water, though the price — on top of an already steep water bill — has been overwhelming.

“As far as my family,” Ronda Thornton said, “we’ve just given up on the city’s water.”

Flint’s water problems are tied inextricably to its fiscal woes. In 1960, nearly 200,000 people lived here. But auto plants closed, and the population has dropped by half. By 2011, Flint’s shrunken tax base and seemingly intractable budget problems prompted Mr. Snyder to appoint an emergency manager for the city. Over the next four years, the city had four managers overseeing operations. Along the way, the city switched its water supply.

For decades, the city bought water from Detroit, which treated water from Lake Huron, then piped it here, 70 miles to the northwest. But with the costs mounting, Flint's leaders decided they could save millions by joining a new regional authority that would draw and treat its own water from Lake Huron.

There was one complication: Flint needed an alternative water supply from April 2014 until the new regional system is ready, probably next year. In the interim, Flint switched to using water from the Flint River, which state officials say had been a backup source in the past.

Ask residents about the Flint River, and many of them roll their eyes. They say it was once as a dumping ground for car parts, grocery carts and refrigerators. There have been significant improvements and intensive restoration campaigns in recent years, though a Flint River Fest set for Friday has been postponed, organizers said, given the "current drinking water crisis."

Even now, state officials say that treated Flint River water is safe and capable of meeting state and federal standards. Officials say the problem may be that some of the aging pipes and service lines that carry water into Flint's homes and businesses contain lead and are being corroded by water. The water Flint used to receive from Detroit was treated with chemicals intended to prevent such corrosion.

For months, questions about lead and other risks multiplied. "Everyone kept saying: 'It's safe! It's safe! It's safe!' " recalled Melissa Mays, a Flint resident who says she was sickened by the water and has helped organize residents over the issue.

Then in September, a researcher from Virginia Tech released findings from the water in hundreds of Flint homes showing elevated lead levels. Blood tests released by a local pediatrician — and corroborated last week by state officials analyzing their own testing — showed an increase in lead levels in children in some neighborhoods since 2014, when the city began drawing water from the river.

“We all have a concern about Flint’s drinking water in terms of what we’re seeing in terms of lead,” Mr. Snyder said last week.

Mr. Walling said that the move to river water occurred when an emergency manager controlled the city, though the City Council did vote for the city’s plans for a new, regional water system. He acknowledged supporting the move in a state of the city address, but said that he had not been given sufficient information about the safety risks.

“I had to work with what I knew at the time,” Mr. Walling, who is up for election next month, said in an interview.

But for many residents, the authorities failed the city by taking so long to react. “Anytime you have to weigh money against the health and welfare of people, it always has to be the health and welfare you go with,” said the Rev. Alfred Harris, a local pastor who has stopped conducting baptisms at his church because of concerns about the water. “We’ve been talking about this for the last 14 months, and they did not give a sincere ear to any of us. Shame on you!”

LeeAnne Walters said her son, Gavin, 4, who has immune system issues, had suffered direct consequences. After the switch to river water, which sometimes looked brown in their house, Gavin dropped to 27 pounds, far below the weight of his twin brother, she said. He sometimes seemed unable to pronounce words he knew, she said, and then test results showed an elevated lead level in his blood.

“He is going to deal with the side effects of this for the rest of his life,” Ms. Walters said. “I don’t think there’s a word angry enough to describe my anger. I trusted the city, and I helped the city poison my kid. Who thought this could happen in the United States?”

Waiting for answers, action in Flint water crisis

By Nancy Kaffer, Detroit Free Press Columnist 10:27 p.m. EDT October 7, 2015

They are still waiting for answers about the water in Flint.

And it's hard to say when, or if, those answers are coming.

It has been two weeks since a hospital researcher found that more Flint kids had been lead poisoned since the city switched its municipal water supply. And it has been nearly a week since the State of Michigan abruptly changed its posture, acknowledging, after months of denial and empty assurances, that Flint's water supply was compromised.

Since then, a lot of folks have worked diligently to sort out how things went so badly wrong in this small, impoverished city, and what the State of Michigan is doing to fix it.

But solutions remain elusive.

The state announced Friday that it has devoted $1 million to provide water filters for Flint residents, is expanding water testing and expediting improved water treatment. But two weeks on, Flint hasn't started adding chemicals to its water that would allow it to pass safely through the city's lead service pipes. That plan can likely be ready within a week, and can be enacted as soon as it's approved by the Michigan Department of Environmental Quality. Scientists say it would take roughly a month before those chemicals would begin to effect Flint's drinking water.

That would be the right play, unless the city opts to rejoin the Detroit Water and Sewerage Department -- as water experts have recommended -- a decision that would likely require financial assistance from the State of Michigan but could result in potable water flowing from Flint taps within two weeks. Is it likely to happen? Your guess is as good as mine.

And state officials continue to insist that the rules designed to monitor water systems, to ensure safe drinking water, worked as they're supposed to.

Kids in danger

The effects of lead on children are irreversible. Lead-poisoned kids can experience a host of behavioral and developmental problems, and in two Flint ZIP codes, the percentage of children affected by lead has doubled, reversing a long trend of improving rates.

That's because in 2014, Flint decided to pump untreated water from the Flint River, ending a decades-long relationship with the Detroit Water and Sewerage Department, while a new regional water authority it's joining is under construction. Since then, Flint's been treating its water locally, prompting a rash of problems related to coliform bacteria, a disinfectant and its byproduct, and now, elevated lead.

Both of these decisions were made while Flint was under state oversight, during the appointments of a series of emergency managers appointed by and answerable to Gov. Rick Snyder. The Michigan Department of Environmental Quality, whose director is appointed by the governor, must ensure that water systems are producing safe drinking water. Because

Flint's water decisions were made under Snyder's emergency managers, the governor's decision-making authority is one step closer to Flint's water crisis.

The water Flint bought from Detroit was "finished," in other words, safe for humans to drink, but also treated to create a film inside those pipes that kept the lead out. That's called "corrosion control," and Detroit achieved this goal by adding phosphates to the water it pumps from Lake Huron.

Flint doesn't.

It took an unreasonably long time to get a solid answer to this question.

Corrosion control

Since April 2014, treatment at Flint's plant has included adding lime to the water it distributed to customers, largely to make the water less acidic, Liane Shekter Smith, chief of the MDEQ's office of drinking water and municipal assistance, said Tuesday.

"There was no corrosion control plan put forward at the time of the switch," Shekter Smith said. "There was a belief that (acidity) adjustment would provide adequate corrosion control, and that rounds of testing would confirm or refute that."

Any new water supply must be tested at six-month intervals to determine whether it meets the guidelines of the federal lead and copper rule, a standard established by the U.S. Environmental Protection Agency.

Tests of Flint's drinking water showed roughly 6 parts per billion (how the presence of lead in water is reckoned) in water sampled between June and December of 2014, said MDEQ spokesman Brad Wurfel. The U.S. Centers for Disease Control and Prevention said there is no acceptable level of lead exposure, but 6 ppb would, in some cases, fall below the EPA's actionable level of 15 ppb.

But because the community Flint serves is so large, it must meet a different threshold, 5 ppb. If a second round of testing showed that lead levels continued to exceed it, Flint would be required to improve its method of corrosion control.

Water sampled between January and June of 2015 showed an alarming increase: lead levels had risen to 11 ppb.

That kind of testing, Shekter Smith said, is the most reliable way to determine whether corrosion control is working.

"Having it in place is best way to know what is happening out in the system," she said.

Given the elevated blood-lead levels in Flint kids, the damage lead can cause, and the permanence of that damage, is that enough?

"I think that we are following the protocol," she said, "and the protocol got us to the right place, and we're making the right decisions."

“It did?" said Erik Olson, a senior strategy director for the Washington, D.C.-based Natural Resources Defense Council. "It didn’t sound like it."

Because the composition of water varies so greatly, there's no one right way to do corrosion control, Olson said. But Flint's plan to use lime only should have prompted questions before switching to Flint River water.

"They definitely should have said, 'OK, what's the basis of that decision? What's your engineering study that shows that that's optimizing your corrosion control?' " Olson said.

That Flint's river water would pass through pipes with lead components shouldn't have been surprising, Olson said -- the presence of lead in the water and sewage infrastructure is well-documented, and well-known.

So why didn't Flint's engineers account for that, when developing a treatment plan? That's just one of the questions I still can't answer.

Flint health experts support Detroit water reconnection

Detroit News Staff and wire reports 7:58 a.m. EDT October 8, 2015

Flint — A committee of local experts in health, water and science has recommended that Flint reconnect to Detroit's water system.

Flint administrator Natasha Henderson urged the committee to not think about cost and decide "what's in the best interest" for Flint, which has a water crisis due to elevated levels of lead in children.

The Technical Advisory Committee met Wednesday. It rarely meets, but state officials say it will have a role in Flint's water quality. The committee has no formal role in deciding whether Flint stops using the Flint River for water.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. A Virginia Tech researcher says there would be dramatic reductions in about a month if the Detroit water system is used.

Gov. Rick Snyder's administration last week said it was considering temporarily reconnecting Flint to Detroit's water system temporarily in a bid to tackle the ongoing water quality and lead issues. The state also planned to expedite construction of a new water line to Lake Huron so a planned water authority that would service Flint could operate as soon as possible. An announcement on the Flint water plan was expected Thursday.

Sara Wurfel, a spokeswoman for Snyder, said the recommendation Wednesday "is an option we're helping thoroughly review and consider with the city, and the technical advisory committee's work is much appreciated in this matter. We're also focused on working hard in collaboration with all and implementing the key action steps outlined on Oct. 2 to help protect public health and ensure safe, accessible drinking water for Flint residents."

Since 2014, the Genesee County city has drawn its drinking water from the Flint River, which has led to major problems for residents.

Last month, the city issued an advisory about its drinking water after concerns surfaced about lead contamination.

On Tuesday, Snyder's administration made free water filters available for residents.

Meanwhile, Uber drivers began collecting donations of bottled water for Flint schools. And Mayor Dayne Walling this week said he gave to Flint Community Schools some 19 palettes Kroger grocers donated.

Uber, others join in efforts to pour clean water into Flint

By Jiquanda Johnson | jjohns16@mlive.com The Flint Journal Follow on Twitter on October 08, 2015 at 5:00 AM, updated October 08, 2015 at 5:06 AM

FLINT, MI -- Businesses, charities and individuals have donated thousands of bottles of water to city of Flint residents and students since last year after controversy erupted over the quality of the city's water. Here is a list of some of the donors.

- □□□□□□□□ The United Way of Genesee County has actively participated in looking at ways to ease water woes in the city of Flint.

- □□□□□□□□ ZeroWater partnered with United Way and Flint Community Schools early October to bring water filters to the school district as a solution instead of having students drink bottled water.

- □□□□□□□□ Uber announced on Oct. 6 that drivers in Detroit will pick up donated bottles of water to bring to Flint throughout the week. People in Detroit just have to use their Uber link to notify drivers that water needs to be picked up. The initiative runs from 2 to 7 p.m. from Oct. 6 - 8.

- □□□□□□□□ There was another donation of more than 4,000 gallons of bottled water through the Flint Diaper Bank and United Way of Genesee County on Oct. 7.

- Donations came in from Flint-area Home Depots and Sam's Club after Hurley Medical Center doctors revealed that lead levels in children in Flint had elevated after the city switched from Detroit's water source to the Flint River.

- Mott Community College issued an Oct. 7 media release saying they are donating bottled water to Pierce Elementary School on the city's north side on Oct. 8.

- Swan Valley High School in Saginaw is collecting bottled water to send to Flint Public Schools. The bottled water drive ends Oct. 9 and school officials are hoping to drop donations off to Flint Community Schools on Oct. 9.

- Bendle High School sophomore Chase Harrison raised money to purchase bottled water for Flint Community Schools.

- Lavish Living, a Flint-based organization, has donated at least 200 cases of water to Flint Community Schools. As of Oct. 6 the organization was still working to collect more water for students.

- The Flint Northwestern football team delivered an estimated 40 cases of water on Oct. 5 to Flint area residents between Dupont, Clio, Carpenter and Pierson roads.

- General Motors Foundation

- In January, Sargent Title Co. collected about 600 cases of water to donated to Flint residents.

- Absopure Water Corp. donated a semi-truck worth of bottled water to Flint residents in January.

- 1st Congregational United Church of Christ in Kalamazoo donated 4,000 bottles of water in September.

- Al Serra Auto Plaza announced Oct. 7 that they will serve as drop off location for bottled water donations. If donors give 12 or more bottles of water, the dealership is offering free tire rotation.

- In March, members of the Michigan National Action Network provided an estimated 10,000 bottles of water to Flint residents.

•□□□□□□□□ District leaders also expect at least 1,000 cases of bottled water to arrive at the Food Bank on Wednesday, Oct. 7, from the Saginaw Chippewa Indian Tribe and Soaring Eagle Waterpark and Hotel and Soaring Eagle Casino and Resort.

The Flint Journal will do updates as more donor names are provided. If anyone has donor information make a note of it in the comments section of this post, or email The Flint Journal at flnews@mlive.com.

http://michronicleonline.com/2015/10/07/flint-water-crisis-a-bitter-indictment-of-dysfunctional-emergency-manager/

Flint water crisis a bitter indictment of dysfunctional emergency manager

By Curt Guyette, Special to The Michigan Chronicle

Stark evidence of how terribly bad things can go when democracy is dismantled can be found in the elevated levels of lead in the children of Flint.

Because of decisions made by an appointed emergency manager, the tragically high costs of trying to balance a budget by switching to an unsafe water source will be borne by kids now forced to struggle with lower IQs, behavioral problems, learning disabilities, and a host of other ill effects.

This is what can happen when people are denied full access to representative government; they get poisoned by appointees with no connection to the community. Under Michigan's emergency manager law – PA 436 — gubernatorial appointees can leave town claiming to have successfully solved a fiscal crisis when in fact what they leave in their wake is a catastrophe of monumental proportions.

In recent days, as the lead problems in Flint have made international news, former Flint emergency manager Darnell Earley – the man in charge when the switch to the Flint River was made, and who is now overseeing the education of the children in Detroit Public Schools – has tried to deny any responsibility for the catastrophe.

According to the Detroit Free Press, Earley claimed in an e-mailed statement "that he was not involved in the decision to use river water."

The governor's office and Earley can rightfully claim that the Flint mayor and City Council initially gave their blessing to the switch made 18 months ago. But that fig leaf provides little real cover for the state officials now trying to run away from their disastrous decision.

For starters, it doesn't matter what the mayor and City Council had to say when the decision was made. The emergency manager, under the sweeping powers granted under Public Act 436, had complete authority to make the switch regardless of what Flint's elected officials wanted.

Moreover, those officials were in essence working for the emergency manager, not the people who elected them. The EM decided how much pay the mayor and council members drew, and how much power they could wield.

How do things go when appointed officials try to buck the control of an EM? As we've seen in Benton Harbor and Detroit Public Schools, the answer is that they get denuded of all power and are completely marginalized.

The message to elected officials under state control has been made perfectly clear: play ball with the EM, or else.

But there is another problem with the EM law as well, one made painfully obvious in Flint. In a normally-functioning democracy, when it came time for a city of Flint to conduct tests to show it is in compliance with federal drinking water regulations, the city would be an independent actor with the Michigan Department of Environmental Quality (MDEQ) serving as a separate check on the system, another independent actor providing oversight to make sure the job is done correctly.

Instead, with Governor Rick Snyder's man being the one in charge when the decision was made to start using river water – a decision that was almost instantly revealed to be fraught with problems – the MDEQ, instead of being a watchdog protecting the citizens of Flint, served as a collaborator, working with the city to do everything in their power to skew results so that their tests would make it appear that the water was safe when it wasn't.

How do we know it wasn't safe? Because grassroots citizen groups worked with researchers at Virginia Tech and the ACLU of Michigan to conduct an independent test of nearly 300 city homes and found that the problem was far worse than the city and state claimed.

When those results were released in mid-September, the response by the state was to try and discredit them. The same was true a week later, when a Hurley Children's Hospital study found the number of children with elevated lead levels doubled after the switch to the Flint River was made.

Those two studies, and the host of problems with the state and city's water testing, last week prompted the ACLU of Michigan, the Natural Resources Defense Council, and an array of civic groups to file a petition with the U.S. EPA, calling upon the federal government to come in and provide the oversight necessary to ensure Flint's water is clean and safe.

Finally, after the state's own data confirmed those findings, and Genesee County officials took the drastic step of declaring a public health emergency, the governor and MDEQ were forced to finally admit the truth and started taking some action.

But even if those measures are enough – and they may well not be, failing as they do to require a switch back to the much cleaner and far less corrosive Detroit system – the damage already caused by this governor and his emergency managers is irreversible for the children who will struggle for the rest of their lives because of the decisions made while Flint was under state control and democracy was suspended.

Subject: RE: Notes from Governor’s Flint announcement

Second batch …

Dan Wyant:

- Reporting on some of the test results we received from schools … results from initial screening are consistent with last round of tests … 4 of 37 samples exceeding 15 ppb action level (3 schools). One test was 101 ppb. More sampling needs to occur.

- Data underscores the need for a complete and thorough plumbing evalustion of all Flint schools. We have a protocol (developed with EPA’s Susan Hedman and Tom Burt).

- Will work with county health department to conduct this testing. Protocol based on similar work conducted in Michigan and elsewhere.

- After evaluation, will assist each school to develop a plan to address issues. Schools should continue to use bottled water until after evaluation assessments are complete.

Nick Lyons, MDHHS:

- Providing 8 staff – potentially including toxicologist – to assist.

- □□□□□□□□ Schools should continue to use bottled/filtered water.

- □□□□□□□□ Residents should use filtered water. Have distributed more than 6,000 NSF certified filtered. [Lots of detail about where, when residents should go to get filters]

- □□□□□□□□ Residents should flush pipes, only use cold water for consumption, cooking, etc.

Dr. Eden Wells:

- □□□□□□□□ Rest assured that the filters are NSF certified for lead reduction.

- □□□□□□□□ Ordering replacements for residents … more details to come.

- □□□□□□□□ Lead exposure comes from a number of environmental sources … lead based paint is the predominant source.

- □□□□□□□□ Encourage parents with concerns to seek testing for their children. There are a number of steps parents can take to reduce lead exposure for their children…

State Sen. Ananich:

- □□□□□□□□ Thanks to Marc Edwards, Dr. Mona?, United Way

- □□□□□□□□ “No one has been a louder and more persistent voice than I have been”

[Emcee Harvey? pushes back on State Sen. … we’re all very concerned, many organizations involved]

Mott Foundation:

- □□□□□□□□ We hope the return to Detroit and eventual new pipeline will restore confidence and protect children … that’s why contributing $4 million.

•□□□□□□□□ Cities across the country struggle with aging infrastructure … hope this will spark federal effort

Cc: Hyde, Tinka; Rowan, Anne (rowan.anne@epa.gov)
Subject: Notes from Governor's Flint announcement

Rough notes from the first two speakers … more to come. DEQ up next.

Gov. Snyder:

•□□□□□□□□ Thanking the Mott Foundation … follow up on what we did last week. Continuing to do last week's actions, but some additional action steps we're looking to tangibly take

•□□□□□□□□ Tech advisory committee made a recommendation about switching to Great Lakes Water Authority / Detroit … "I'm in full support of a return to the GLWA" … I support the mayor in his desire to move in that direction

•□□□□□□□□ We believe it will be better for public safety … some financial issues … about a $12 million incremental cost. Will recommend to legislature to provide $6 million toward that cost. Mott Foundation will kick in $4 million. Flint will find $2 million.

•□□□□□□□□ <video froze>

•□□□□□□□□ Asking for $4 million to continue with what was discussed last week … testing, water filters, people for analysis and work, including lead education

•□□□□□□□□ U.S. EPA has been excellent to work with

Dayne Walling:

- City has decided to switch back to Detroit water … fastest way to protect public health and stabilize Flint’s water system.

- City is already working diligently to make the reconnection … discussion around optimal corrosion control has already started

- Monday 2 p.m. press briefing

- EPA technical assistance will be involved from the beginning so best practices will be in place

- Reconnecting to Detroit is a major step toward safe water, but rehab project will take more time and money. State and EPA working with city on immediate and long term steps.

- Lead service lines need to be replaced

- Important lessons from Flint’s experience … need to look at state and federal water rules, etc.

Subject: RE: Notes from Governor's Flint announcement

Last batch, from the Q&A … these are very rough. Let me know if you'd like me to clarify anything.

Was it a mistake to ever switch from Detroit water?

Gov.: We will create an "after action report"

How much was decision rooted in technical decisions vs. public loss of confidence?

Gov.: Both … not one or the other, but are true.

What's the timeline … when can we reconnect? And why weren't schools tested earlier?

Gov.: This is the city of Flint making the decision to reconnect. With respect to school testing, we followed the federal requirements … in after action will likely recommend more testing required for schools.

Mayor: Will provide timeline update on Monday

Is there a need to buy pipes back? What infrastructure is needed to reconnect?

Mayor: Will use transmission line now owned by the county

When did state first find out there was a problem? How did you find out?

Dan Wyant: Tested the plant seven times quarterly when the switch occurred. Ran the lead copper protocol that we run in other communities. First 6 month period showed 6 ppb. Second period was 11 ppb. Consulted with EPA in July 2015. LCR says after two consecutive tests above 5 ppb, need to inform community and take more steps. Letter went out in August 2015. Big issue is lead service lines

What finally pushed recommendation to switch to Detroit water?

Gov.: Wanted to collect facts … scientists/researchers on technical advisory committee met. Also, figuring out the logistics of how to do this.

Last week, you said there were probably things not fully understood at the time of the switch?

Gov.: Protocols were being followed as established by the EPA … what apparently is true, is there needed to be more work. No set protocol from EPA for looking at schools. Will continue analysis … are there recommendations we can make to our federal partners.

You guys have admitted there are some gaps in the testing protocols. What's to say we won't find these same problems in other cities?

Wyant: 800 schools are non-community sources and they are required to test. With respect to surface water, we do test at the plant. Historically there has been EPA guidance for testing at schools. Committed to educating and providing technical assistance. Need to go back and look at all schools.

Broad perception in the public that Flint's financial situation lead to this problem … in hindsight, should the money have been made available from the start?

Gov.: Not necessarily … we don't know what would have happened even with the prior water because there wasn't testing.

Schoolkids who've been drinking 6-7 times the action level for a year … what'll be done for them?

MDHHS: Proposing to send experts in to identify and track kids with elevated blood levels and then take steps to address. There is an existing lead testing program in the state, etc.

Will switch to Detroit fix the problem or will there be long term problems?

Gov.: Yes, will fix problem, but we'll continue the steps announced last week. Longer term, problem is lead service lines … what options are there in partnership with federal partners. Need more investment in water and sewer infrastructure … this needs to be a national effort.

Subject: RE: Notes from Governor's Flint announcement

Second batch …

Dan Wyant:

•□□□□□□□□ Reporting on some of the test results we received from schools … results from initial screening are consistent with last round of tests … 4 of 37 samples exceeding 15 ppb action level (3 schools). One test was 101 ppb. More sampling needs to occur.

•□□□□□□□□ Data underscores the need for a complete and thorough plumbing evalustion of all Flint schools. We have a protocol (developed with EPA's Susan Hedman and Tom Burt).

•□□□□□□□□ Will work with county health department to conduct this testing. Protocol based on similar work conducted in Michigan and elsewhere.

•□□□□□□□□ After evaluation, will assist each school to develop a plan to address issues. Schools should continue to use bottled water until after evaluation assessments are complete.

Nick Lyons, MDHHS:

- Providing 8 staff – potentially including toxicologist – to assist.
- Schools should continue to use bottled/filtered water.
- Residents should use filtered water. Have distributed more than 6,000 NSF certified filtered. [Lots of detail about where, when residents should go to get filters]
- Residents should flush pipes, only use cold water for consumption, cooking, etc.

Dr. Eden Wells:

- Rest assured that the filters are NSF certified for lead reduction.
- Ordering replacements for residents … more details to come.
- Lead exposure comes from a number of environmental sources … lead based paint is the predominant source.
- Encourage parents with concerns to seek testing for their children. There are a number of steps parents can take to reduce lead exposure for their children…

State Sen. Ananich:

- Thanks to Marc Edwards, Dr. Mona?, United Way
- "No one has been a louder and more persistent voice than I have been"

[Emcee Harvey? pushes back on State Sen. … we're all very concerned, many organizations involved]

Mott Foundation:

- We hope the return to Detroit and eventual new pipeline will restore confidence and protect children … that's why contributing $4 million.

•□□□□□□□□ Cities across the country struggle with aging infrastructure … hope this will spark federal effort

•□□□□□□□□ Data underscores the need for a complete and thorough plumbing evalustion of all Flint schools. We have a protocol (developed with EPA's Susan Hedman and Tom Burt).

- Will work with county health department to conduct this testing. Protocol based on similar work conducted in Michigan and elsewhere.

- After evaluation, will assist each school to develop a plan to address issues. Schools should continue to use bottled water until after evaluation assessments are complete.

Nick Lyons, MDHHS:

- Providing 8 staff – potentially including toxicologist – to assist.

- Schools should continue to use bottled/filtered water.

- Residents should use filtered water. Have distributed more than 6,000 NSF certified filtered. [Lots of detail about where, when residents should go to get filters]

- Residents should flush pipes, only use cold water for consumption, cooking, etc.

Dr. Eden Wells:

- Rest assured that the filters are NSF certified for lead reduction.

- Ordering replacements for residents … more details to come.

- Lead exposure comes from a number of environmental sources … lead based paint is the predominant source.

- Encourage parents with concerns to seek testing for their children. There are a number of steps parents can take to reduce lead exposure for their children…

State Sen. Ananich:

- Thanks to Marc Edwards, Dr. Mona?, United Way

- “No one has been a louder and more persistent voice than I have been”

[Emcee Harvey? pushes back on State Sen. … we're all very concerned, many organizations involved]

Mott Foundation:

•□□□□□□□□ We hope the return to Detroit and eventual new pipeline will restore confidence and protect children … that's why contributing $4 million.

•□□□□□□□□ Cities across the country struggle with aging infrastructure … hope this will spark federal effort

Subject: Notes from Governor's Flint announcement

Rough notes from the first two speakers … more to come. DEQ up next.

Gov. Snyder:

•□□□□□□□□ Thanking the Mott Foundation … follow up on what we did last week. Continuing to do last week's actions, but some additional action steps we're looking to tangibly take

•□□□□□□□□ Tech advisory committee made a recommendation about switching to Great Lakes Water Authority / Detroit … "I'm in full support of a return to the GLWA" … I support the mayor in his desire to move in that direction

•□□□□□□□□ We believe it will be better for public safety … some financial issues … about a $12 million incremental cost. Will recommend to legislature to provide $6 million toward that cost. Mott Foundation will kick in $4 million. Flint will find $2 million.

•□□□□□□□□ <video froze>

•□□□□□□□□ Asking for $4 million to continue with what was discussed last week … testing, water filters, people for analysis and work, including lead education

•□□□□□□□□ U.S. EPA has been excellent to work with

Dayne Walling:

•□□□□□□□□ City has decided to switch back to Detroit water … fastest way to protect public health and stabilize Flint's water system.

•□□□□□□□□ City is already working diligently to make the reconnection … discussion around optimal corrosion control has already started

•□□□□□□□□ Monday 2 p.m. press briefing

•□□□□□□□□ EPA technical assistance will be involved from the beginning so best practices will be in place

•□□□□□□□□ Reconnecting to Detroit is a major step toward safe water, but rehab project will take more time and money. State and EPA working with city on immediate and long term steps.

•□□□□□□□□ Lead service lines need to be replaced

•□□□□□□□□ Important lessons from Flint's experience … need to look at state and federal water rules, etc.

Subject: Draft updated Flint statement

Here's a first crack…

Last week's statement:

Actions that the State of Michigan and the City of Flint announced today are important steps to protect public health. The immediate steps being taken to implement corrosion control will reduce lead in drinking water, as required by the Safe Drinking Water Act. US EPA will continue to provide technical assistance to the State of Michigan and the City of Flint to support their joint effort.

Draft updated statement:

U.S. EPA supports the decision of the city of Flint to return to using Detroit water. This, and the other actions announced last week, are important steps to protect public health. Over time, Flint will benefit from the corrosion control treatment already implemented by Detroit, as required by the Safe Drinking Water Act. However, in the near-term the State of Michigan and City of Flint continued efforts to protect public health will be needed. U.S. EPA will continue to provide technical assistance to the State of Michigan and the City of Flint to support their joint effort.

U.S. EPA supports the decision of the city of Flint to return to using Detroit water. This, and the other actions announced last week, are important steps to protect public health. Flint will benefit from the corrosion control treatment already implemented by Detroit, but more steps may be needed to reduce lead in drinking water, as required by the Safe Drinking Water Act. FLINT, MI -- Gov. Rick Snyder says on Twitter that he will make an announcement about Flint water at 10 a.m. Thursday.

The planned announcement comes less than 24 hours after Flint's Technical Advisory Committee recommended the city end its use of the Flint River as its water source.

Since making the switch from using pre-treated Lake Huron water from the city of Detroit to treating river water at its own plant in April 2014, Flint officials have struggled to maintain the quality and safety of water delivered to city residents.

Snyder's Twitter message says, "Watch live tomorrow at 10 a.m. as I make an announcement regarding Flint water" at mi.gov/SnyderLive.

The state's Web site says the governor will be joined by Flint Mayor Dayne Walling, other state officials, and Ridgway White of the Charles Stewart Mott Foundation.

High levels of lead in city water and in the blood of children and infants since the city changed its water source have triggered a public health emergency here, including the mass distribution of lead-clearing faucet filters and bottled water.

Researchers from Virginia Tech university say river water has proven to be far more corrosive than water from the Detroit Water and Sewerage Department, causing lead to leach into homes that have lead service lines.

Flint City Administrator Natasha Henderson said today, Oct. 7, that she believes the position of state officials has been shifting on continued use of the Flint River, a change that was made while Flint was being run by a state-appointed emergency manager.

"We're to the point that the state believes this is a public health emergency," Henderson told the City Council. "From what I see, the state is working very well with us."

The city administrator is among officials who have advocated for a return to buying water from the DWSD since a study was released last month by Hurley Medical Center's director of pediatric residency program.

The study showed the percentage of Flint infants and children with above average lead levels has nearly doubled citywide since the switch to river water, and has nearly tripled among children in "high risk" areas of lead exposure.

Governor plans 10 a.m. announcement on troubled Flint water system

FLINT (AP) — Gov. Rick Snyder plans an announcement about the water system in Flint, which is facing a public health emergency over lead in its water.

A posting on the state's website says Snyder on Thursday morning will be joined for the announcement by officials including Flint Mayor Dayne Walling, state Department of Environmental Quality Director Dan Wyant and state Department of Health and Human Services Director Nick Lyon.

The announcement comes a day after a committee of local experts in health, water and science recommended Flint reconnect to Detroit's water system while it awaits a new pipeline to Lake Huron.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. State government and nonprofit groups are distributing filters and bottled water to Flint homes and schools.

Snyder's announcement can be viewed live at 10 a.m. Thursday, Oct. 8 by visiting http://1.usa.gov/1QapVxk

Flint Officials Are No Longer Saying the Water Is Fine

By MONICA DAVEY, New York Times, OCT. 7, 2015

FLINT, Mich. — All along, through months of complaints from residents of this city about the peculiar colors and odors they said were coming from their faucets, the overriding message from the authorities here was that the water would be just fine.

Yes, there had been a boil order when fecal coliform bacteria turned up in some neighborhoods last year. And yes, the extra chlorine that was pumped in to solve that problem seemed to create another one — increased levels of a different contaminant.

Still, the guidance from Flint officials about the temporary water supply they switched to in 2014 — partly to save money — sounded assuring. In a notice sent to residents in July, city officials declared: "This is not an emergency. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours."

The soothing talk has vanished. In recent weeks, testing has shown increased levels of lead in the blood of some Flint children — and health officials pointed to the water as a possible source.

First, the city advised residents to run their water for five minutes before using it, to use only cold water for drinking and cooking, and to install lead-removing water filters. Then county officials issued an emergency advisory recommending that people not drink Flint's water unless it is tested for lead or filtered.

And last Friday, after corroborating that lead levels had risen in some children, state officials called for the water to be tested at all Flint public schools and for stepped-up efforts to replace lead service lines; they also promised $1 million to provide filters.

Officials met here on Wednesday afternoon, and talks were underway, officials said, for additional solutions that could come as early as Thursday. Gov. Rick Snyder said on Twitter late Wednesday that he planned to make an announcement about the situation on Thursday morning.

Private groups have raced to donate bottled water to schools, where the water fountains are now shut off, as well as filters to families who cannot afford them. Saying "we're just in a heck of a bind," Robert J. Pickell, the Genesee County sheriff, began serving bottled water and food that need not be cooked in water to hundreds of inmates in the county jail. Some residents have begun washing their children and pets with bottled water.

And Flint's mayor, Dayne Walling, who had attended a 2014 event to celebrate the switch to the new water supply, called for returning to the city's old water supply and urged state officials to provide millions of dollars to help pay for it.

The contaminated water was just the latest blow to Flint, an economically battered city that has struggled for years with factory closings, job losses and population decline.

Along Saginaw Street downtown, where at least one business had an “un-leaded” sign posted by a jug of water, residents had lingering questions: Would filters really do enough to make the water safe? What about unfiltered showers? Could they rely on the water at work and at restaurants? And why had it taken so long for leaders to figure out that there was a problem?

“I don’t think people know what’s going on at all,” said Chris Thornton, 49, who described the first blast of water from his faucets some days as looking like urine, smelling like bleach and tasting of metal. After his wife, Ronda, 50, felt sick to her stomach for months, the Thorntons began buying jugs of bottled water, though the price — on top of an already steep water bill — has been overwhelming.

“As far as my family,” Ronda Thornton said, “we’ve just given up on the city’s water.”

Flint’s water problems are tied inextricably to its fiscal woes. In 1960, nearly 200,000 people lived here. But auto plants closed, and the population has dropped by half. By 2011, Flint’s shrunken tax base and seemingly intractable budget problems prompted Mr. Snyder to appoint an emergency manager for the city. Over the next four years, the city had four managers overseeing operations. Along the way, the city switched its water supply.

For decades, the city bought water from Detroit, which treated water from Lake Huron, then piped it here, 70 miles to the northwest. But with the costs mounting, Flint’s leaders decided they could save millions by joining a new regional authority that would draw and treat its own water from Lake Huron.

There was one complication: Flint needed an alternative water supply from April 2014 until the new regional system is ready, probably next year. In the interim, Flint switched to using water from the Flint River, which state officials say had been a backup source in the past.

Ask residents about the Flint River, and many of them roll their eyes. They say it was once as a dumping ground for car parts, grocery carts and refrigerators. There have been significant improvements and intensive restoration campaigns in recent years, though a Flint River Fest set for Friday has been postponed, organizers said, given the “current drinking water crisis.”

Even now, state officials say that treated Flint River water is safe and capable of meeting state and federal standards. Officials say the problem may be that some of the aging pipes and service lines that carry water into Flint’s homes and businesses contain lead and are being corroded by water. The water Flint used to receive from Detroit was treated with chemicals intended to prevent such corrosion.

For months, questions about lead and other risks multiplied. “Everyone kept saying: ‘It’s safe! It’s safe! It’s safe!’ ” recalled Melissa Mays, a Flint resident who says she was sickened by the water and has helped organize residents over the issue.

Then in September, a researcher from Virginia Tech released findings from the water in hundreds of Flint homes showing elevated lead levels. Blood tests released by a local pediatrician — and corroborated last week by state officials analyzing their own testing — showed an increase in lead levels in children in some neighborhoods since 2014, when the city began drawing water from the river.

“We all have a concern about Flint’s drinking water in terms of what we’re seeing in terms of lead,” Mr. Snyder said last week.

Mr. Walling said that the move to river water occurred when an emergency manager controlled the city, though the City Council did vote for the city’s plans for a new, regional water system. He acknowledged supporting the move in a state of the city address, but said that he had not been given sufficient information about the safety risks.

“I had to work with what I knew at the time,” Mr. Walling, who is up for election next month, said in an interview.

But for many residents, the authorities failed the city by taking so long to react. “Anytime you have to weigh money against the health and welfare of people, it always has to be the health and welfare you go with,” said the Rev. Alfred Harris, a local pastor who has stopped conducting baptisms at his church because of concerns about the water. “We’ve been talking about this for the last 14 months, and they did not give a sincere ear to any of us. Shame on you!”

LeeAnne Walters said her son, Gavin, 4, who has immune system issues, had suffered direct consequences. After the switch to river water, which sometimes looked brown in their house, Gavin dropped to 27 pounds, far below the weight of his twin brother, she said. He sometimes seemed unable to pronounce words he knew, she said, and then test results showed an elevated lead level in his blood.

“He is going to deal with the side effects of this for the rest of his life,” Ms. Walters said. “I don’t think there’s a word angry enough to describe my anger. I trusted the city, and I helped the city poison my kid. Who thought this could happen in the United States?”

Waiting for answers, action in Flint water crisis

By Nancy Kaffer, Detroit Free Press Columnist 10:27 p.m. EDT October 7, 2015

They are still waiting for answers about the water in Flint.

And it's hard to say when, or if, those answers are coming.

It has been two weeks since a hospital researcher found that more Flint kids had been lead poisoned since the city switched its municipal water supply. And it has been nearly a week since the State of Michigan abruptly changed its posture, acknowledging, after months of denial and empty assurances, that Flint's water supply was compromised.

Since then, a lot of folks have worked diligently to sort out how things went so badly wrong in this small, impoverished city, and what the State of Michigan is doing to fix it.

But solutions remain elusive.

The state announced Friday that it has devoted $1 million to provide water filters for Flint residents, is expanding water testing and expediting improved water treatment. But two weeks on, Flint hasn't started adding chemicals to its water that would allow it to pass safely through the city's lead service pipes. That plan can likely be ready within a week, and can be enacted as soon as it's approved by the Michigan Department of Environmental Quality. Scientists say it would take roughly a month before those chemicals would begin to effect Flint's drinking water.

That would be the right play, unless the city opts to rejoin the Detroit Water and Sewerage Department -- as water experts have recommended -- a decision that would likely require financial assistance from the State of Michigan but could result in potable water flowing from Flint taps within two weeks. Is it likely to happen? Your guess is as good as mine.

And state officials continue to insist that the rules designed to monitor water systems, to ensure safe drinking water, worked as they're supposed to.

Kids in danger

The effects of lead on children are irreversible. Lead-poisoned kids can experience a host of behavioral and developmental problems, and in two Flint ZIP codes, the percentage of children affected by lead has doubled, reversing a long trend of improving rates.

That's because in 2014, Flint decided to pump untreated water from the Flint River, ending a decades-long relationship with the Detroit Water and Sewerage Department, while a new regional water authority it's joining is under construction. Since then, Flint's been treating its water locally, prompting a rash of problems related to coliform bacteria, a disinfectant and its byproduct, and now, elevated lead.

Both of these decisions were made while Flint was under state oversight, during the appointments of a series of emergency managers appointed by and answerable to Gov. Rick Snyder. The Michigan Department of Environmental Quality, whose director is appointed by the governor, must ensure that water systems are producing safe drinking water. Because Flint's water decisions were made under Snyder's emergency managers, the governor's decision-making authority is one step closer to Flint's water crisis.

The water Flint bought from Detroit was "finished," in other words, safe for humans to drink, but also treated to create a film inside those pipes that kept the lead out. That's called "corrosion control," and Detroit achieved this goal by adding phosphates to the water it pumps from Lake Huron.

Flint doesn't.

It took an unreasonably long time to get a solid answer to this question.

Corrosion control

Since April 2014, treatment at Flint's plant has included adding lime to the water it distributed to customers, largely to make the water less acidic, Liane Shekter Smith, chief of the MDEQ's office of drinking water and municipal assistance, said Tuesday.

"There was no corrosion control plan put forward at the time of the switch," Shekter Smith said. "There was a belief that (acidity) adjustment would provide adequate corrosion control, and that rounds of testing would confirm or refute that."

Any new water supply must be tested at six-month intervals to determine whether it meets the guidelines of the federal lead and copper rule, a standard established by the U.S. Environmental Protection Agency.

Tests of Flint's drinking water showed roughly 6 parts per billion (how the presence of lead in water is reckoned) in water sampled between June and December of 2014, said MDEQ spokesman Brad Wurfel. The U.S. Centers for Disease Control and Prevention said there is no acceptable level of lead exposure, but 6 ppb would, in some cases, fall below the EPA's actionable level of 15 ppb.

But because the community Flint serves is so large, it must meet a different threshold, 5 ppb. If a second round of testing showed that lead levels continued to exceed it, Flint would be required to improve its method of corrosion control.

Water sampled between January and June of 2015 showed an alarming increase: lead levels had risen to 11 ppb.

That kind of testing, Shekter Smith said, is the most reliable way to determine whether corrosion control is working.

"Having it in place is best way to know what is happening out in the system," she said.

Given the elevated blood-lead levels in Flint kids, the damage lead can cause, and the permanence of that damage, is that enough?

"I think that we are following the protocol," she said, "and the protocol got us to the right place, and we're making the right decisions."

“It did?" said Erik Olson, a senior strategy director for the Washington, D.C.-based Natural Resources Defense Council. "It didn’t sound like it."

Because the composition of water varies so greatly, there's no one right way to do corrosion control, Olson said. But Flint's plan to use lime only should have prompted questions before switching to Flint River water.

"They definitely should have said, 'OK, what’s the basis of that decision? What’s your engineering study that shows that that’s optimizing your corrosion control?' " Olson said.

That Flint's river water would pass through pipes with lead components shouldn't have been surprising, Olson said -- the presence of lead in the water and sewage infrastructure is well-documented, and well-known.

So why didn't Flint's engineers account for that, when developing a treatment plan? That's just one of the questions I still can't answer.

http://www.detroitnews.com/story/news/local/michigan/2015/10/08/flint-health-experts-support-detroit-water-reconnection/73568654/

Flint health experts support Detroit water reconnection

Detroit News Staff and wire reports 7:58 a.m. EDT October 8, 2015

Flint — A committee of local experts in health, water and science has recommended that Flint reconnect to Detroit's water system.

Flint administrator Natasha Henderson urged the committee to not think about cost and decide "what's in the best interest" for Flint, which has a water crisis due to elevated levels of lead in children.

The Technical Advisory Committee met Wednesday. It rarely meets, but state officials say it will have a role in Flint's water quality. The committee has no formal role in deciding whether Flint stops using the Flint River for water.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. A Virginia Tech researcher says there would be dramatic reductions in about a month if the Detroit water system is used.

Gov. Rick Snyder's administration last week said it was considering temporarily reconnecting Flint to Detroit's water system temporarily in a bid to tackle the ongoing water quality and lead issues. The state also planned to expedite construction of a new water line to Lake Huron so a planned water authority that would service Flint could operate as soon as possible. An announcement on the Flint water plan was expected Thursday.

Sara Wurfel, a spokeswoman for Snyder, said the recommendation Wednesday "is an option we're helping thoroughly review and consider with the city, and the technical advisory committee's work is much appreciated in this matter. We're also focused on working hard in collaboration with all and implementing the key action steps outlined on Oct. 2 to help protect public health and ensure safe, accessible drinking water for Flint residents."

Since 2014, the Genesee County city has drawn its drinking water from the Flint River, which has led to major problems for residents.

Last month, the city issued an advisory about its drinking water after concerns surfaced about lead contamination.

On Tuesday, Snyder's administration made free water filters available for residents.

Meanwhile, Uber drivers began collecting donations of bottled water for Flint schools. And Mayor Dayne Walling this week said he gave to Flint Community Schools some 19 palettes Kroger grocers donated.

Uber, others join in efforts to pour clean water into Flint

By Jiquanda Johnson | jjohns16@mlive.com The Flint Journal Follow on Twitter on October 08, 2015 at 5:00 AM, updated October 08, 2015 at 5:06 AM

FLINT, MI -- Businesses, charities and individuals have donated thousands of bottles of water to city of Flint residents and students since last year after controversy erupted over the quality of the city's water. Here is a list of some of the donors.

•□□□□□□□□ The United Way of Genesee County has actively participated in looking at ways to ease water woes in the city of Flint.

•□□□□□□□□ ZeroWater partnered with United Way and Flint Community Schools early October to bring water filters to the school district as a solution instead of having students drink bottled water.

•□□□□□□□□ Uber announced on Oct. 6 that drivers in Detroit will pick up donated bottles of water to bring to Flint throughout the week. People in Detroit just have to use their Uber link to notify drivers that water needs to be picked up. The initiative runs from 2 to 7 p.m. from Oct. 6 - 8.

•□□□□□□□□ There was another donation of more than 4,000 gallons of bottled water through the Flint Diaper Bank and United Way of Genesee County on Oct. 7.

•□□□□□□□□ Donations came in from Flint-area Home Depots and Sam's Club after Hurley Medical Center doctors revealed that lead levels in children in Flint had elevated after the city switched from Detroit's water source to the Flint River.

•□□□□□□□□ Mott Community College issued an Oct. 7 media release saying they are donating bottled water to Pierce Elementary School on the city's north side on Oct. 8.

•□□□□□□□□ Swan Valley High School in Saginaw is collecting bottled water to send to Flint Public Schools. The bottled water drive ends Oct. 9 and school officials are hoping to drop donations off to Flint Community Schools on Oct. 9.

•□□□□□□□□ Bendle High School sophomore Chase Harrison raised money to purchase bottled water for Flint Community Schools.

•□□□□□□□□ Lavish Living, a Flint-based organization, has donated at least 200 cases of water to Flint Community Schools. As of Oct. 6 the organization was still working to collect more water for students.

•□□□□□□□□ The Flint Northwestern football team delivered an estimated 40 cases of water on Oct. 5 to Flint area residents between Dupont, Clio, Carpenter and Pierson roads.

•□□□□□□□□ General Motors Foundation

•□□□□□□□□ In January, Sargent Title Co. collected about 600 cases of water to donated to Flint residents.

•□□□□□□□□ Absopure Water Corp. donated a semi-truck worth of bottled water to Flint residents in January.

•□□□□□□□□ 1st Congregational United Church of Christ in Kalamazoo donated 4,000 bottles of water in September.

•□□□□□□□□ Al Serra Auto Plaza announced Oct. 7 that they will serve as drop off location for bottled water donations. If donors give 12 or more bottles of water, the dealership is offering free tire rotation.

•□□□□□□□□ In March, members of the Michigan National Action Network provided an estimated 10,000 bottles of water to Flint residents.

•□□□□□□□□ District leaders also expect at least 1,000 cases of bottled water to arrive at the Food Bank on Wednesday, Oct. 7, from the Saginaw Chippewa Indian Tribe and Soaring Eagle Waterpark and Hotel and Soaring Eagle Casino and Resort.

The Flint Journal will do updates as more donor names are provided. If anyone has donor information make a note of it in the comments section of this post, or email The Flint Journal at flnews@mlive.com.

Flint water crisis a bitter indictment of dysfunctional emergency manager

By Curt Guyette, Special to The Michigan Chronicle

Stark evidence of how terribly bad things can go when democracy is dismantled can be found in the elevated levels of lead in the children of Flint.

Because of decisions made by an appointed emergency manager, the tragically high costs of trying to balance a budget by switching to an unsafe water source will be borne by kids now forced to struggle with lower IQs, behavioral problems, learning disabilities, and a host of other ill effects.

This is what can happen when people are denied full access to representative government; they get poisoned by appointees with no connection to the community. Under Michigan's emergency manager law – PA 436 — gubernatorial appointees can leave town claiming to have successfully solved a fiscal crisis when in fact what they leave in their wake is a catastrophe of monumental proportions.

In recent days, as the lead problems in Flint have made international news, former Flint emergency manager Darnell Earley – the man in charge when the switch to the Flint River was made, and who is now overseeing the education of the children in Detroit Public Schools – has tried to deny any responsibility for the catastrophe.

According to the Detroit Free Press, Earley claimed in an e-mailed statement "that he was not involved in the decision to use river water."

The governor's office and Earley can rightfully claim that the Flint mayor and City Council initially gave their blessing to the switch made 18 months ago. But that fig leaf provides little real cover for the state officials now trying to run away from their disastrous decision.

For starters, it doesn't matter what the mayor and City Council had to say when the decision was made. The emergency manager, under the sweeping powers granted under Public Act 436, had complete authority to make the switch regardless of what Flint's elected officials wanted.

Moreover, those officials were in essence working for the emergency manager, not the people who elected them. The EM decided how much pay the mayor and council members drew, and how much power they could wield.

How do things go when appointed officials try to buck the control of an EM? As we've seen in Benton Harbor and Detroit Public Schools, the answer is that they get denuded of all power and are completely marginalized.

The message to elected officials under state control has been made perfectly clear: play ball with the EM, or else.

But there is another problem with the EM law as well, one made painfully obvious in Flint. In a normally-functioning democracy, when it came time for a city of Flint to conduct tests to show it is in compliance with federal drinking water regulations, the city would be an independent actor with the Michigan Department of Environmental Quality (MDEQ) serving as a separate check on the system, another independent actor providing oversight to make sure the job is done correctly.

Instead, with Governor Rick Snyder's man being the one in charge when the decision was made to start using river water – a decision that was almost instantly revealed to be fraught with problems – the MDEQ, instead of being a watchdog protecting the citizens of Flint, served as a collaborator, working with the city to do everything in their power to skew results so that their tests would make it appear that the water was safe when it wasn't.

How do we know it wasn't safe? Because grassroots citizen groups worked with researchers at Virginia Tech and the ACLU of Michigan to conduct an independent test of nearly 300 city homes and found that the problem was far worse than the city and state claimed.

When those results were released in mid-September, the response by the state was to try and discredit them. The same was true a week later, when a Hurley Children's Hospital study found the number of children with elevated lead levels doubled after the switch to the Flint River was made.

Those two studies, and the host of problems with the state and city's water testing, last week prompted the ACLU of Michigan, the Natural Resources Defense Council, and an array of civic groups to file a petition with the U.S. EPA, calling upon the federal government to come in and provide the oversight necessary to ensure Flint's water is clean and safe.

Finally, after the state's own data confirmed those findings, and Genesee County officials took the drastic step of declaring a public health emergency, the governor and MDEQ were forced to finally admit the truth and started taking some action.

But even if those measures are enough – and they may well not be, failing as they do to require a switch back to the much cleaner and far less corrosive Detroit system – the damage already caused by this governor and his emergency managers is irreversible for the children who will struggle for the rest of their lives because of the decisions made while Flint was under state control and democracy was suspended.

Here's a draft revised statement:

U.S. EPA supports the city of Flint's decision to return to using Detroit water. This, and the other actions announced last week, are important steps to protect public health. Over time, Flint will benefit from the corrosion control treatment already implemented by Detroit, as required by the Safe Drinking Water Act. U.S. EPA will continue to provide technical assistance to the State of Michigan and the City of Flint to support their joint effort.

Gov. Snyder says he'll make announcement on Flint water Thursday

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 07, 2015 at 9:45 PM, updated October 08, 2015 at 8:08 AM

FLINT, MI -- Gov. Rick Snyder says on Twitter that he will make an announcement about Flint water at 10 a.m. Thursday.

The planned announcement comes less than 24 hours after Flint's Technical Advisory Committee recommended the city end its use of the Flint River as its water source.

Since making the switch from using pre-treated Lake Huron water from the city of Detroit to treating river water at its own plant in April 2014, Flint officials have struggled to maintain the quality and safety of water delivered to city residents.

Snyder's Twitter message says, "Watch live tomorrow at 10 a.m. as I make an announcement regarding Flint water" at mi.gov/SnyderLive.

The state's Web site says the governor will be joined by Flint Mayor Dayne Walling, other state officials, and Ridgway White of the Charles Stewart Mott Foundation.

High levels of lead in city water and in the blood of children and infants since the city changed its water source have triggered a public health emergency here, including the mass distribution of lead-clearing faucet filters and bottled water.

Researchers from Virginia Tech university say river water has proven to be far more corrosive than water from the Detroit Water and Sewerage Department, causing lead to leach into homes that have lead service lines.

Flint City Administrator Natasha Henderson said today, Oct. 7, that she believes the position of state officials has been shifting on continued use of the Flint River, a change that was made while Flint was being run by a state-appointed emergency manager.

"We're to the point that the state believes this is a public health emergency," Henderson told the City Council. "From what I see, the state is working very well with us."

The city administrator is among officials who have advocated for a return to buying water from the DWSD since a study was released last month by Hurley Medical Center's director of pediatric residency program.

The study showed the percentage of Flint infants and children with above average lead levels has nearly doubled citywide since the switch to river water, and has nearly tripled among children in "high risk" areas of lead exposure.

Governor plans 10 a.m. announcement on troubled Flint water system

FLINT (AP) — Gov. Rick Snyder plans an announcement about the water system in Flint, which is facing a public health emergency over lead in its water.

A posting on the state's website says Snyder on Thursday morning will be joined for the announcement by officials including Flint Mayor Dayne Walling, state Department of Environmental Quality Director Dan Wyant and state Department of Health and Human Services Director Nick Lyon.

The announcement comes a day after a committee of local experts in health, water and science recommended Flint reconnect to Detroit's water system while it awaits a new pipeline to Lake Huron.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. State government and nonprofit groups are distributing filters and bottled water to Flint homes and schools.

Snyder's announcement can be viewed live at 10 a.m. Thursday, Oct. 8 by visiting http://1.usa.gov/1QapVxk

Flint Officials Are No Longer Saying the Water Is Fine

By MONICA DAVEY, New York Times, OCT. 7, 2015

FLINT, Mich. — All along, through months of complaints from residents of this city about the peculiar colors and odors they said were coming from their faucets, the overriding message from the authorities here was that the water would be just fine.

Yes, there had been a boil order when fecal coliform bacteria turned up in some neighborhoods last year. And yes, the extra chlorine that was pumped in to solve that problem seemed to create another one — increased levels of a different contaminant.

Still, the guidance from Flint officials about the temporary water supply they switched to in 2014 — partly to save money — sounded assuring. In a notice sent to residents in July, city officials declared: “This is not an emergency. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours.”

The soothing talk has vanished. In recent weeks, testing has shown increased levels of lead in the blood of some Flint children — and health officials pointed to the water as a possible source.

First, the city advised residents to run their water for five minutes before using it, to use only cold water for drinking and cooking, and to install lead-removing water filters. Then county officials issued an emergency advisory recommending that people not drink Flint’s water unless it is tested for lead or filtered.

And last Friday, after corroborating that lead levels had risen in some children, state officials called for the water to be tested at all Flint public schools and for stepped-up efforts to replace lead service lines; they also promised $1 million to provide filters.

Officials met here on Wednesday afternoon, and talks were underway, officials said, for additional solutions that could come as early as Thursday. Gov. Rick Snyder said on Twitter late Wednesday that he planned to make an announcement about the situation on Thursday morning.

Private groups have raced to donate bottled water to schools, where the water fountains are now shut off, as well as filters to families who cannot afford them. Saying “we’re just in a heck of a bind,” Robert J. Pickell, the Genesee County sheriff, began serving bottled water and food that need not be cooked in water to hundreds of inmates in the county jail. Some residents have begun washing their children and pets with bottled water.

And Flint’s mayor, Dayne Walling, who had attended a 2014 event to celebrate the switch to the new water supply, called for returning to the city’s old water supply and urged state officials to provide millions of dollars to help pay for it.

The contaminated water was just the latest blow to Flint, an economically battered city that has struggled for years with factory closings, job losses and population decline.

Along Saginaw Street downtown, where at least one business had an “un-leaded” sign posted by a jug of water, residents had lingering questions: Would filters really do enough to make the water safe? What about unfiltered showers? Could they rely on the water at work and at restaurants? And why had it taken so long for leaders to figure out that there was a problem?

“I don’t think people know what’s going on at all,” said Chris Thornton, 49, who described the first blast of water from his faucets some days as looking like urine, smelling like bleach and tasting of metal. After his wife, Ronda, 50, felt sick to her stomach for months, the Thorntons began buying jugs of bottled water, though the price — on top of an already steep water bill — has been overwhelming.

“As far as my family,” Ronda Thornton said, “we’ve just given up on the city’s water.”

Flint’s water problems are tied inextricably to its fiscal woes. In 1960, nearly 200,000 people lived here. But auto plants closed, and the population has dropped by half. By 2011, Flint’s shrunken tax base and seemingly intractable budget problems prompted Mr. Snyder to appoint an emergency manager for the city. Over the next four years, the city had four managers overseeing operations. Along the way, the city switched its water supply.

For decades, the city bought water from Detroit, which treated water from Lake Huron, then piped it here, 70 miles to the northwest. But with the costs mounting, Flint’s leaders decided they could save millions by joining a new regional authority that would draw and treat its own water from Lake Huron.

There was one complication: Flint needed an alternative water supply from April 2014 until the new regional system is ready, probably next year. In the interim, Flint switched to using water from the Flint River, which state officials say had been a backup source in the past.

Ask residents about the Flint River, and many of them roll their eyes. They say it was once as a dumping ground for car parts, grocery carts and refrigerators. There have been significant improvements and intensive restoration campaigns in recent years, though a Flint River Fest set for Friday has been postponed, organizers said, given the “current drinking water crisis.”

Even now, state officials say that treated Flint River water is safe and capable of meeting state and federal standards. Officials say the problem may be that some of the aging pipes and service lines that carry water into Flint's homes and businesses contain lead and are being corroded by water. The water Flint used to receive from Detroit was treated with chemicals intended to prevent such corrosion.

For months, questions about lead and other risks multiplied. "Everyone kept saying: 'It's safe! It's safe! It's safe!' " recalled Melissa Mays, a Flint resident who says she was sickened by the water and has helped organize residents over the issue.

Then in September, a researcher from Virginia Tech released findings from the water in hundreds of Flint homes showing elevated lead levels. Blood tests released by a local pediatrician — and corroborated last week by state officials analyzing their own testing — showed an increase in lead levels in children in some neighborhoods since 2014, when the city began drawing water from the river.

"We all have a concern about Flint's drinking water in terms of what we're seeing in terms of lead," Mr. Snyder said last week.

Mr. Walling said that the move to river water occurred when an emergency manager controlled the city, though the City Council did vote for the city's plans for a new, regional water system. He acknowledged supporting the move in a state of the city address, but said that he had not been given sufficient information about the safety risks.

"I had to work with what I knew at the time," Mr. Walling, who is up for election next month, said in an interview.

But for many residents, the authorities failed the city by taking so long to react. "Anytime you have to weigh money against the health and welfare of people, it always has to be the health and welfare you go with," said the Rev. Alfred Harris, a local pastor who has stopped conducting baptisms at his church because of concerns about the water. "We've been talking about this for the last 14 months, and they did not give a sincere ear to any of us. Shame on you!"

LeeAnne Walters said her son, Gavin, 4, who has immune system issues, had suffered direct consequences. After the switch to river water, which sometimes looked brown in their house, Gavin dropped to 27 pounds, far below the weight of his twin brother, she said. He sometimes seemed unable to pronounce words he knew, she said, and then test results showed an elevated lead level in his blood.

“He is going to deal with the side effects of this for the rest of his life,” Ms. Walters said. “I don’t think there’s a word angry enough to describe my anger. I trusted the city, and I helped the city poison my kid. Who thought this could happen in the United States?”

Waiting for answers, action in Flint water crisis

By Nancy Kaffer, Detroit Free Press Columnist 10:27 p.m. EDT October 7, 2015

They are still waiting for answers about the water in Flint.

And it's hard to say when, or if, those answers are coming.

It has been two weeks since a hospital researcher found that more Flint kids had been lead poisoned since the city switched its municipal water supply. And it has been nearly a week since the State of Michigan abruptly changed its posture, acknowledging, after months of denial and empty assurances, that Flint's water supply was compromised.

Since then, a lot of folks have worked diligently to sort out how things went so badly wrong in this small, impoverished city, and what the State of Michigan is doing to fix it.

But solutions remain elusive.

The state announced Friday that it has devoted $1 million to provide water filters for Flint residents, is expanding water testing and expediting improved water treatment. But two weeks on, Flint hasn't started adding chemicals to its water that would allow it to pass safely through the city's lead service pipes. That plan can likely be ready within a week, and can be enacted as soon as it's approved by the Michigan Department of Environmental Quality. Scientists say it would take roughly a month before those chemicals would begin to effect Flint's drinking water.

That would be the right play, unless the city opts to rejoin the Detroit Water and Sewerage Department -- as water experts have recommended -- a decision that would likely require financial assistance from the State of Michigan but could result in potable water flowing from Flint taps within two weeks. Is it likely to happen? Your guess is as good as mine.

And state officials continue to insist that the rules designed to monitor water systems, to ensure safe drinking water, worked as they're supposed to.

Kids in danger

The effects of lead on children are irreversible. Lead-poisoned kids can experience a host of behavioral and developmental problems, and in two Flint ZIP codes, the percentage of children affected by lead has doubled, reversing a long trend of improving rates.

That's because in 2014, Flint decided to pump untreated water from the Flint River, ending a decades-long relationship with the Detroit Water and Sewerage Department, while a new regional water authority it's joining is under construction. Since then, Flint's been treating its water locally, prompting a rash of problems related to coliform bacteria, a disinfectant and its byproduct, and now, elevated lead.

Both of these decisions were made while Flint was under state oversight, during the appointments of a series of emergency managers appointed by and answerable to Gov. Rick Snyder. The Michigan Department of Environmental Quality, whose director is appointed by the governor, must ensure that water systems are producing safe drinking water. Because Flint's water decisions were made under Snyder's emergency managers, the governor's decision-making authority is one step closer to Flint's water crisis.

The water Flint bought from Detroit was "finished," in other words, safe for humans to drink, but also treated to create a film inside those pipes that kept the lead out. That's called "corrosion control," and Detroit achieved this goal by adding phosphates to the water it pumps from Lake Huron.

Flint doesn't.

It took an unreasonably long time to get a solid answer to this question.

Corrosion control

Since April 2014, treatment at Flint's plant has included adding lime to the water it distributed to customers, largely to make the water less acidic, Liane Shekter Smith, chief of the MDEQ's office of drinking water and municipal assistance, said Tuesday.

"There was no corrosion control plan put forward at the time of the switch," Shekter Smith said. "There was a belief that (acidity) adjustment would provide adequate corrosion control, and that rounds of testing would confirm or refute that."

Any new water supply must be tested at six-month intervals to determine whether it meets the guidelines of the federal lead and copper rule, a standard established by the U.S. Environmental Protection Agency.

Tests of Flint's drinking water showed roughly 6 parts per billion (how the presence of lead in water is reckoned) in water sampled between June and December of 2014, said MDEQ spokesman Brad Wurfel. The U.S. Centers for Disease Control and Prevention said there is no acceptable level of lead exposure, but 6 ppb would, in some cases, fall below the EPA's actionable level of 15 ppb.

But because the community Flint serves is so large, it must meet a different threshold, 5 ppb. If a second round of testing showed that lead levels continued to exceed it, Flint would be required to improve its method of corrosion control.

Water sampled between January and June of 2015 showed an alarming increase: lead levels had risen to 11 ppb.

That kind of testing, Shekter Smith said, is the most reliable way to determine whether corrosion control is working.

"Having it in place is best way to know what is happening out in the system," she said.

Given the elevated blood-lead levels in Flint kids, the damage lead can cause, and the permanence of that damage, is that enough?

"I think that we are following the protocol," she said, "and the protocol got us to the right place, and we're making the right decisions."

“It did?" said Erik Olson, a senior strategy director for the Washington, D.C.-based Natural Resources Defense Council. "It didn’t sound like it."

Because the composition of water varies so greatly, there's no one right way to do corrosion control, Olson said. But Flint's plan to use lime only should have prompted questions before switching to Flint River water.

"They definitely should have said, 'OK, what’s the basis of that decision? What’s your engineering study that shows that that’s optimizing your corrosion control?' " Olson said.

That Flint's river water would pass through pipes with lead components shouldn't have been surprising, Olson said -- the presence of lead in the water and sewage infrastructure is well-documented, and well-known.

So why didn't Flint's engineers account for that, when developing a treatment plan? That's just one of the questions I still can't answer.

http://www.detroitnews.com/story/news/local/michigan/2015/10/08/flint-health-experts-support-detroit-water-reconnection/73568654/

Flint health experts support Detroit water reconnection

Detroit News Staff and wire reports 7:58 a.m. EDT October 8, 2015

Flint — A committee of local experts in health, water and science has recommended that Flint reconnect to Detroit’s water system.

Flint administrator Natasha Henderson urged the committee to not think about cost and decide “what’s in the best interest” for Flint, which has a water crisis due to elevated levels of lead in children.

The Technical Advisory Committee met Wednesday. It rarely meets, but state officials say it will have a role in Flint’s water quality. The committee has no formal role in deciding whether Flint stops using the Flint River for water.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. A Virginia Tech researcher says there would be dramatic reductions in about a month if the Detroit water system is used.

Gov. Rick Snyder’s administration last week said it was considering temporarily reconnecting Flint to Detroit’s water system temporarily in a bid to tackle the ongoing water quality and lead issues. The state also planned to expedite construction of a new water line to Lake Huron so a planned water authority that would service Flint could operate as soon as possible. An announcement on the Flint water plan was expected Thursday.

Sara Wurfel, a spokeswoman for Snyder, said the recommendation Wednesday “is an option we’re helping thoroughly review and consider with the city, and the technical advisory committee’s work is much appreciated in this matter. We’re also focused on working hard in collaboration with all and implementing the key action steps outlined on Oct. 2 to help protect public health and ensure safe, accessible drinking water for Flint residents.”

Since 2014, the Genesee County city has drawn its drinking water from the Flint River, which has led to major problems for residents.

Last month, the city issued an advisory about its drinking water after concerns surfaced about lead contamination.

On Tuesday, Snyder’s administration made free water filters available for residents.

Meanwhile, Uber drivers began collecting donations of bottled water for Flint schools. And Mayor Dayne Walling this week said he gave to Flint Community Schools some 19 palettes Kroger grocers donated.

Uber, others join in efforts to pour clean water into Flint

By Jiquanda Johnson | jjohns16@mlive.com The Flint Journal Follow on Twitter on October 08, 2015 at 5:00 AM, updated October 08, 2015 at 5:06 AM

FLINT, MI -- Businesses, charities and individuals have donated thousands of bottles of water to city of Flint residents and students since last year after controversy erupted over the quality of the city's water. Here is a list of some of the donors.

- The United Way of Genesee County has actively participated in looking at ways to ease water woes in the city of Flint.
- ZeroWater partnered with United Way and Flint Community Schools early October to bring water filters to the school district as a solution instead of having students drink bottled water.
- Uber announced on Oct. 6 that drivers in Detroit will pick up donated bottles of water to bring to Flint throughout the week. People in Detroit just have to use their Uber link to notify drivers that water needs to be picked up. The initiative runs from 2 to 7 p.m. from Oct. 6 - 8.

- □□□□□□□□ There was another donation of more than 4,000 gallons of bottled water through the Flint Diaper Bank and United Way of Genesee County on Oct. 7.

- □□□□□□□□ Donations came in from Flint-area Home Depots and Sam's Club after Hurley Medical Center doctors revealed that lead levels in children in Flint had elevated after the city switched from Detroit's water source to the Flint River.

- □□□□□□□□ Mott Community College issued an Oct. 7 media release saying they are donating bottled water to Pierce Elementary School on the city's north side on Oct. 8.

- □□□□□□□□ Swan Valley High School in Saginaw is collecting bottled water to send to Flint Public Schools. The bottled water drive ends Oct. 9 and school officials are hoping to drop donations off to Flint Community Schools on Oct. 9.

- □□□□□□□□ Bendle High School sophomore Chase Harrison raised money to purchase bottled water for Flint Community Schools.

- □□□□□□□□ Lavish Living, a Flint-based organization, has donated at least 200 cases of water to Flint Community Schools. As of Oct. 6 the organization was still working to collect more water for students.

- □□□□□□□□ The Flint Northwestern football team delivered an estimated 40 cases of water on Oct. 5 to Flint area residents between Dupont, Clio, Carpenter and Pierson roads.

- □□□□□□□□ General Motors Foundation

- □□□□□□□□ In January, Sargent Title Co. collected about 600 cases of water to donated to Flint residents.

- □□□□□□□□ Absopure Water Corp. donated a semi-truck worth of bottled water to Flint residents in January.

- □□□□□□□□ 1st Congregational United Church of Christ in Kalamazoo donated 4,000 bottles of water in September.

- □□□□□□□□ Al Serra Auto Plaza announced Oct. 7 that they will serve as drop off location for bottled water donations. If donors give 12 or more bottles of water, the dealership is offering free tire rotation.

- □□□□□□□□ In March, members of the Michigan National Action Network provided an estimated 10,000 bottles of water to Flint residents.

•□□□□□□□□ District leaders also expect at least 1,000 cases of bottled water to arrive at the Food Bank on Wednesday, Oct. 7, from the Saginaw Chippewa Indian Tribe and Soaring Eagle Waterpark and Hotel and Soaring Eagle Casino and Resort.

The Flint Journal will do updates as more donor names are provided. If anyone has donor information make a note of it in the comments section of this post, or email The Flint Journal at flnews@mlive.com.

Flint water crisis a bitter indictment of dysfunctional emergency manager

By Curt Guyette, Special to The Michigan Chronicle

Stark evidence of how terribly bad things can go when democracy is dismantled can be found in the elevated levels of lead in the children of Flint.

Because of decisions made by an appointed emergency manager, the tragically high costs of trying to balance a budget by switching to an unsafe water source will be borne by kids now forced to struggle with lower IQs, behavioral problems, learning disabilities, and a host of other ill effects.

This is what can happen when people are denied full access to representative government; they get poisoned by appointees with no connection to the community. Under Michigan's emergency manager law – PA 436 — gubernatorial appointees can leave town claiming to have successfully solved a fiscal crisis when in fact what they leave in their wake is a catastrophe of monumental proportions.

In recent days, as the lead problems in Flint have made international news, former Flint emergency manager Darnell Earley – the man in charge when the switch to the Flint River was made, and who is now overseeing the education of the children in Detroit Public Schools – has tried to deny any responsibility for the catastrophe.

According to the Detroit Free Press, Earley claimed in an e-mailed statement “that he was not involved in the decision to use river water.”

The governor’s office and Earley can rightfully claim that the Flint mayor and City Council initially gave their blessing to the switch made 18 months ago. But that fig leaf provides little real cover for the state officials now trying to run away from their disastrous decision.

For starters, it doesn’t matter what the mayor and City Council had to say when the decision was made. The emergency manager, under the sweeping powers granted under Public Act 436, had complete authority to make the switch regardless of what Flint’s elected officials wanted.

Moreover, those officials were in essence working for the emergency manager, not the people who elected them. The EM decided how much pay the mayor and council members drew, and how much power they could wield.

How do things go when appointed officials try to buck the control of an EM? As we’ve seen in Benton Harbor and Detroit Public Schools, the answer is that they get denuded of all power and are completely marginalized.

The message to elected officials under state control has been made perfectly clear: play ball with the EM, or else.

But there is another problem with the EM law as well, one made painfully obvious in

Flint. In a normally-functioning democracy, when it came time for a city of Flint to conduct tests to show it is in compliance with federal drinking water regulations, the city would be an independent actor with the Michigan Department of Environmental Quality (MDEQ) serving as a separate check on the system, another independent actor providing oversight to make sure the job is done correctly.

Instead, with Governor Rick Snyder's man being the one in charge when the decision was made to start using river water – a decision that was almost instantly revealed to be fraught with problems – the MDEQ, instead of being a watchdog protecting the citizens of Flint, served as a collaborator, working with the city to do everything in their power to skew results so that their tests would make it appear that the water was safe when it wasn't.

How do we know it wasn't safe? Because grassroots citizen groups worked with researchers at Virginia Tech and the ACLU of Michigan to conduct an independent test of nearly 300 city homes and found that the problem was far worse than the city and state claimed.

When those results were released in mid-September, the response by the state was to try and discredit them. The same was true a week later, when a Hurley Children's Hospital study found the number of children with elevated lead levels doubled after the switch to the Flint River was made.

Those two studies, and the host of problems with the state and city's water testing, last week prompted the ACLU of Michigan, the Natural Resources Defense Council, and an array of civic groups to file a petition with the U.S. EPA, calling upon the federal government to come in and provide the oversight necessary to ensure Flint's water is clean and safe.

Finally, after the state's own data confirmed those findings, and Genesee County officials took the drastic step of declaring a public health emergency, the governor and MDEQ were forced to finally admit the truth and started taking some action.

But even if those measures are enough – and they may well not be, failing as they do to require a switch back to the much cleaner and far less corrosive Detroit system – the damage already caused by this governor and his emergency managers is irreversible for the children who will struggle for the rest of their lives because of the decisions made while Flint was under state control and democracy was suspended.

> Gov.: Both … not one or the other, but are true.

What's the timeline … when can we reconnect? And why weren't schools tested earlier?

Gov.: This is the city of Flint making the decision to reconnect. With respect to school testing, we followed the federal requirements … in after action will likely recommend more testing required for schools.

Mayor: Will provide timeline update on Monday

Is there a need to buy pipes back? What infrastructure is needed to reconnect?

Mayor: Will use transmission line now owned by the county

When did state first find out there was a problem? How did you find out?

Dan Wyant: Tested the plant seven times quarterly when the switch occurred. Ran the lead copper protocol that we run in other communities. First 6 month period showed 6 ppb. Second period was 11 ppb. Consulted with EPA in July 2015. LCR says after two consecutive tests above 5 ppb, need to inform community and take more steps. Letter went out in August 2015. Big issue is lead service lines

What finally pushed recommendation to switch to Detroit water?

Gov.: Wanted to collect facts … scientists/researchers on technical advisory committee met. Also, figuring out the logistics of how to do this.

Last week, you said there were probably things not fully understood at the time of the switch?

Gov.: Protocols were being followed as established by the EPA … what apparently is true, is there needed to be more work. No set protocol from EPA for looking at schools. Will continue analysis … are there recommendations we can make to our federal partners.

You guys have admitted there are some gaps in the testing protocols. What's to say we won't find these same problems in other cities?

Wyant: 800 schools are non-community sources and they are required to test. With respect to surface water, we do test at the plant. Historically there has been EPA guidance for testing at schools. Committed to educating and providing technical assistance. Need to go back and look at all schools.

Broad perception in the public that Flint's financial situation lead to this problem … in hindsight, should the money have been made available from the start?

Gov.: Not necessarily … we don't know what would have happened even with the prior water because there wasn't testing.

Schoolkids who've been drinking 6-7 times the action level for a year … what'll be done for them?

MDHHS: Proposing to send experts in to identify and track kids with elevated blood levels and then take steps to address. There is an existing lead testing program in the state, etc.

Will switch to Detroit fix the problem or will there be long term problems?

Gov.: Yes, will fix problem, but we'll continue the steps announced last week. Longer term, problem is lead service lines … what options are there in partnership with federal partners. Need more investment in water and sewer infrastructure … this needs to be a national effort.

Second batch …

Dan Wyant:

•□□□□□□□□ Reporting on some of the test results we received from schools … results from initial screening are consistent with last round of tests … 4 of 37 samples exceeding 15 ppb action level (3 schools). One test was 101 ppb. More sampling needs to occur.

•□□□□□□□□ Data underscores the need for a complete and thorough plumbing evalustion of all Flint schools. We have a protocol (developed with EPA's Susan Hedman and Tom Burt).

•□□□□□□□□ Will work with county health department to conduct this testing. Protocol based on similar work conducted in Michigan and elsewhere.

•□□□□□□□□ After evaluation, will assist each school to develop a plan to address issues. Schools should continue to use bottled water until after evaluation assessments are complete.

Nick Lyons, MDHHS:

•□□□□□□□□ Providing 8 staff – potentially including toxicologist – to assist.

•□□□□□□□□ Schools should continue to use bottled/filtered water.

•□□□□□□□□ Residents should use filtered water. Have distributed more than 6,000 NSF certified filtered. [Lots of detail about where, when residents should go to get filters]

•□□□□□□□□ Residents should flush pipes, only use cold water for consumption, cooking, etc.

Dr. Eden Wells:

•□□□□□□□□ Rest assured that the filters are NSF certified for lead reduction.

•□□□□□□□□ Ordering replacements for residents … more details to come.

•□□□□□□□□ Lead exposure comes from a number of environmental sources … lead based paint is the predominant source.

•□□□□□□□□ Encourage parents with concerns to seek testing for their children. There are a number of steps parents can take to reduce lead exposure for their children…

State Sen. Ananich:

•□□□□□□□□ Thanks to Marc Edwards, Dr. Mona?, United Way

•□□□□□□□□ “No one has been a louder and more persistent voice than I have been”

[Emcee Harvey? pushes back on State Sen. … we’re all very concerned, many organizations involved]

Mott Foundation:

•□□□□□□□□ We hope the return to Detroit and eventual new pipeline will restore confidence and protect children … that’s why contributing $4 million.

•□□□□□□□□ Cities across the country struggle with aging infrastructure … hope this will spark federal effort

Subject: Notes from Governor's Flint announcement

Rough notes from the first two speakers … more to come. DEQ up next.

Gov. Snyder:

•□□□□□□□□ Thanking the Mott Foundation … follow up on what we did last week. Continuing to do last week's actions, but some additional action steps we're looking to tangibly take

•□□□□□□□□ Tech advisory committee made a recommendation about switching to Great Lakes Water Authority / Detroit … "I'm in full support of a return to the GLWA" … I support the mayor in his desire to move in that direction

•□□□□□□□□ We believe it will be better for public safety … some financial issues … about a $12 million incremental cost. Will recommend to legislature to provide $6 million toward that cost. Mott Foundation will kick in $4 million. Flint will find $2 million.

•□□□□□□□□ <video froze>

•□□□□□□□□ Asking for $4 million to continue with what was discussed last week … testing, water filters, people for analysis and work, including lead education

•□□□□□□□□ U.S. EPA has been excellent to work with

Dayne Walling:

•□□□□□□□□ City has decided to switch back to Detroit water … fastest way to protect public health and stabilize Flint's water system.

•□□□□□□□□ City is already working diligently to make the reconnection … discussion around optimal corrosion control has already started

•□□□□□□□□ Monday 2 p.m. press briefing

•□□□□□□□□ EPA technical assistance will be involved from the beginning so best practices will be in place

•□□□□□□□□ Reconnecting to Detroit is a major step toward safe water, but rehab project will take more time and money. State and EPA working with city on immediate and long term steps.

•□□□□□□□□ Lead service lines need to be replaced

•□□□□□□□□ Important lessons from Flint's experience … need to look at state and federal water rules, etc.

Here's a different version to consider:

> U.S. EPA will continue to provide technical assistance to the State of Michigan and the City of Flint to support their joint effort to supply drinking water from the Great Lakes Water Authority to Flint residents. US EPA will also provide technical assistance during the transition to the new Karagondi Water Authority next year.

If we use this option -- please check spelling of Karagondi!

Gov. Snyder says he'll make announcement on Flint water Thursday

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 07, 2015 at 9:45 PM, updated October 08, 2015 at 8:08 AM

FLINT, MI -- Gov. Rick Snyder says on Twitter that he will make an announcement about Flint water at 10 a.m. Thursday.

The planned announcement comes less than 24 hours after Flint's Technical Advisory Committee recommended the city end its use of the Flint River as its water source.

Since making the switch from using pre-treated Lake Huron water from the city of Detroit to treating river water at its own plant in April 2014, Flint officials have struggled to maintain the quality and safety of water delivered to city residents.

Snyder's Twitter message says, "Watch live tomorrow at 10 a.m. as I make an announcement regarding Flint water" at mi.gov/SnyderLive.

The state's Web site says the governor will be joined by Flint Mayor Dayne Walling, other state officials, and Ridgway White of the Charles Stewart Mott Foundation.

High levels of lead in city water and in the blood of children and infants since the city changed its water source have triggered a public health emergency here, including the mass distribution of lead-clearing faucet filters and bottled water.

Researchers from Virginia Tech university say river water has proven to be far more corrosive than water from the Detroit Water and Sewerage Department, causing lead to leach into homes that have lead service lines.

Flint City Administrator Natasha Henderson said today, Oct. 7, that she believes the position of state officials has been shifting on continued use of the Flint River, a change that was made while Flint was being run by a state-appointed emergency manager.

"We're to the point that the state believes this is a public health emergency," Henderson told the City Council. "From what I see, the state is working very well with us."

The city administrator is among officials who have advocated for a return to buying water from the DWSD since a study was released last month by Hurley Medical Center's director of pediatric residency program.

The study showed the percentage of Flint infants and children with above average lead levels has nearly doubled citywide since the switch to river water, and has nearly tripled among children in "high risk" areas of lead exposure.

Governor plans 10 a.m. announcement on troubled Flint water system

FLINT (AP) — Gov. Rick Snyder plans an announcement about the water system in Flint, which is facing a public health emergency over lead in its water.

A posting on the state's website says Snyder on Thursday morning will be joined for the announcement by officials including Flint Mayor Dayne Walling, state Department of Environmental Quality Director Dan Wyant and state Department of Health and Human Services Director Nick Lyon.

The announcement comes a day after a committee of local experts in health, water and science recommended Flint reconnect to Detroit's water system while it awaits a new pipeline to Lake Huron.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. State government and nonprofit groups are distributing filters and bottled water to Flint homes and schools.

Snyder's announcement can be viewed live at 10 a.m. Thursday, Oct. 8 by visiting http://1.usa.gov/1QapVxk

Flint Officials Are No Longer Saying the Water Is Fine

By MONICA DAVEY, New York Times, OCT. 7, 2015

FLINT, Mich. — All along, through months of complaints from residents of this city about the peculiar colors and odors they said were coming from their faucets, the overriding message from the authorities here was that the water would be just fine.

Yes, there had been a boil order when fecal coliform bacteria turned up in some neighborhoods last year. And yes, the extra chlorine that was pumped in to solve that problem seemed to create another one — increased levels of a different contaminant.

Still, the guidance from Flint officials about the temporary water supply they switched to in 2014 — partly to save money — sounded assuring. In a notice sent to residents in July, city officials declared: “This is not an emergency. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours.”

The soothing talk has vanished. In recent weeks, testing has shown increased levels of lead in the blood of some Flint children — and health officials pointed to the water as a possible source.

First, the city advised residents to run their water for five minutes before using it, to use only cold water for drinking and cooking, and to install lead-removing water filters. Then county officials issued an emergency advisory recommending that people not drink Flint’s water unless it is tested for lead or filtered.

And last Friday, after corroborating that lead levels had risen in some children, state officials called for the water to be tested at all Flint public schools and for stepped-up efforts to replace lead service lines; they also promised $1 million to provide filters.

Officials met here on Wednesday afternoon, and talks were underway, officials said, for additional solutions that could come as early as Thursday. Gov. Rick Snyder said on Twitter late Wednesday that he planned to make an announcement about the situation on Thursday morning.

Private groups have raced to donate bottled water to schools, where the water fountains are now shut off, as well as filters to families who cannot afford them. Saying “we’re just in a heck of a bind,” Robert J. Pickell, the Genesee County sheriff, began serving bottled water and food that need not be cooked in water to hundreds of inmates in the county jail. Some residents have begun washing their children and pets with bottled water.

And Flint’s mayor, Dayne Walling, who had attended a 2014 event to celebrate the switch to the new water supply, called for returning to the city’s old water supply and urged state officials to provide millions of dollars to help pay for it.

The contaminated water was just the latest blow to Flint, an economically battered city that has struggled for years with factory closings, job losses and population decline.

Along Saginaw Street downtown, where at least one business had an “un-leaded” sign posted by a jug of water, residents had lingering questions: Would filters really do enough to make the water safe? What about unfiltered showers? Could they rely on the water at work and at restaurants? And why had it taken so long for leaders to figure out that there was a problem?

“I don’t think people know what’s going on at all,” said Chris Thornton, 49, who described the first blast of water from his faucets some days as looking like urine, smelling like bleach and tasting of metal. After his wife, Ronda, 50, felt sick to her stomach for months, the Thorntons began buying jugs of bottled water, though the price — on top of an already steep water bill — has been overwhelming.

“As far as my family,” Ronda Thornton said, “we’ve just given up on the city’s water.”

Flint’s water problems are tied inextricably to its fiscal woes. In 1960, nearly 200,000 people lived here. But auto plants closed, and the population has dropped by half. By 2011, Flint’s shrunken tax base and seemingly intractable budget problems prompted Mr. Snyder to appoint an emergency manager for the city. Over the next four years, the city had four managers overseeing operations. Along the way, the city switched its water supply.

For decades, the city bought water from Detroit, which treated water from Lake Huron, then piped it here, 70 miles to the northwest. But with the costs mounting, Flint’s leaders decided they could save millions by joining a new regional authority that would draw and treat its own water from Lake Huron.

There was one complication: Flint needed an alternative water supply from April 2014 until the new regional system is ready, probably next year. In the interim, Flint switched to using water from the Flint River, which state officials say had been a backup source in the past.

Ask residents about the Flint River, and many of them roll their eyes. They say it was once as a dumping ground for car parts, grocery carts and refrigerators. There have been significant improvements and intensive restoration campaigns in recent years, though a Flint River Fest set for Friday has been postponed, organizers said, given the “current drinking water crisis.”

Even now, state officials say that treated Flint River water is safe and capable of meeting state and federal standards. Officials say the problem may be that some of the aging pipes and service lines that carry water into Flint's homes and businesses contain lead and are being corroded by water. The water Flint used to receive from Detroit was treated with chemicals intended to prevent such corrosion.

For months, questions about lead and other risks multiplied. "Everyone kept saying: 'It's safe! It's safe! It's safe!' " recalled Melissa Mays, a Flint resident who says she was sickened by the water and has helped organize residents over the issue.

Then in September, a researcher from Virginia Tech released findings from the water in hundreds of Flint homes showing elevated lead levels. Blood tests released by a local pediatrician — and corroborated last week by state officials analyzing their own testing — showed an increase in lead levels in children in some neighborhoods since 2014, when the city began drawing water from the river.

"We all have a concern about Flint's drinking water in terms of what we're seeing in terms of lead," Mr. Snyder said last week.

Mr. Walling said that the move to river water occurred when an emergency manager controlled the city, though the City Council did vote for the city's plans for a new, regional water system. He acknowledged supporting the move in a state of the city address, but said that he had not been given sufficient information about the safety risks.

"I had to work with what I knew at the time," Mr. Walling, who is up for election next month, said in an interview.

But for many residents, the authorities failed the city by taking so long to react. "Anytime you have to weigh money against the health and welfare of people, it always has to be the health and welfare you go with," said the Rev. Alfred Harris, a local pastor who has stopped conducting baptisms at his church because of concerns about the water. "We've been talking about this for the last 14 months, and they did not give a sincere ear to any of us. Shame on you!"

LeeAnne Walters said her son, Gavin, 4, who has immune system issues, had suffered direct consequences. After the switch to river water, which sometimes looked brown in their house, Gavin dropped to 27 pounds, far below the weight of his twin brother, she said. He sometimes seemed unable to pronounce words he knew, she said, and then test results showed an elevated lead level in his blood.

"He is going to deal with the side effects of this for the rest of his life," Ms. Walters said. "I don't think there's a word angry enough to describe my anger. I trusted the city, and I helped the city poison my kid. Who thought this could happen in the United States?"

---

http://www.freep.com/story/opinion/columnists/nancy-kaffer/2015/10/07/flint-water-crisis/73534078/

Waiting for answers, action in Flint water crisis

By Nancy Kaffer, Detroit Free Press Columnist 10:27 p.m. EDT October 7, 2015

They are still waiting for answers about the water in Flint.

And it's hard to say when, or if, those answers are coming.

It has been two weeks since a hospital researcher found that more Flint kids had been lead poisoned since the city switched its municipal water supply. And it has been nearly a week since the State of Michigan abruptly changed its posture, acknowledging, after months of denial and empty assurances, that Flint's water supply was compromised.

Since then, a lot of folks have worked diligently to sort out how things went so badly wrong in this small, impoverished city, and what the State of Michigan is doing to fix it.

But solutions remain elusive.

The state announced Friday that it has devoted $1 million to provide water filters for Flint residents, is expanding water testing and expediting improved water treatment. But two weeks on, Flint hasn't started adding chemicals to its water that would allow it to pass safely through the city's lead service pipes. That plan can likely be ready within a week, and can be enacted as soon as it's approved by the Michigan Department of Environmental Quality. Scientists say it would take roughly a month before those chemicals would begin to effect Flint's drinking water.

That would be the right play, unless the city opts to rejoin the Detroit Water and Sewerage Department -- as water experts have recommended -- a decision that would likely require financial assistance from the State of Michigan but could result in potable water flowing from Flint taps within two weeks. Is it likely to happen? Your guess is as good as mine.

And state officials continue to insist that the rules designed to monitor water systems, to ensure safe drinking water, worked as they're supposed to.

Kids in danger

The effects of lead on children are irreversible. Lead-poisoned kids can experience a host of behavioral and developmental problems, and in two Flint ZIP codes, the percentage of children affected by lead has doubled, reversing a long trend of improving rates.

That's because in 2014, Flint decided to pump untreated water from the Flint River, ending a decades-long relationship with the Detroit Water and Sewerage Department, while a new regional water authority it's joining is under construction. Since then, Flint's been treating its water locally, prompting a rash of problems related to coliform bacteria, a disinfectant and its byproduct, and now, elevated lead.

Both of these decisions were made while Flint was under state oversight, during the appointments of a series of emergency managers appointed by and answerable to Gov. Rick Snyder. The Michigan Department of Environmental Quality, whose director is appointed by the governor, must ensure that water systems are producing safe drinking water. Because Flint's water decisions were made under Snyder's emergency managers, the governor's decision-making authority is one step closer to Flint's water crisis.

The water Flint bought from Detroit was "finished," in other words, safe for humans to drink, but also treated to create a film inside those pipes that kept the lead out. That's called "corrosion control," and Detroit achieved this goal by adding phosphates to the water it pumps from Lake Huron.

Flint doesn't.

It took an unreasonably long time to get a solid answer to this question.

Corrosion control

Since April 2014, treatment at Flint's plant has included adding lime to the water it distributed to customers, largely to make the water less acidic, Liane Shekter Smith, chief of the MDEQ's office of drinking water and municipal assistance, said Tuesday.

"There was no corrosion control plan put forward at the time of the switch," Shekter Smith said. "There was a belief that (acidity) adjustment would provide adequate corrosion control, and that rounds of testing would confirm or refute that."

Any new water supply must be tested at six-month intervals to determine whether it meets the guidelines of the federal lead and copper rule, a standard established by the U.S. Environmental Protection Agency.

Tests of Flint's drinking water showed roughly 6 parts per billion (how the presence of lead in water is reckoned) in water sampled between June and December of 2014, said MDEQ spokesman Brad Wurfel. The U.S. Centers for Disease Control and Prevention said there is no acceptable level of lead exposure, but 6 ppb would, in some cases, fall below the EPA's actionable level of 15 ppb.

But because the community Flint serves is so large, it must meet a different threshold, 5 ppb. If a second round of testing showed that lead levels continued to exceed it, Flint would be required to improve its method of corrosion control.

Water sampled between January and June of 2015 showed an alarming increase: lead levels had risen to 11 ppb.

That kind of testing, Shekter Smith said, is the most reliable way to determine whether corrosion control is working.

"Having it in place is best way to know what is happening out in the system," she said.

Given the elevated blood-lead levels in Flint kids, the damage lead can cause, and the permanence of that damage, is that enough?

"I think that we are following the protocol," she said, "and the protocol got us to the right place, and we're making the right decisions."

“It did?" said Erik Olson, a senior strategy director for the Washington, D.C.-based Natural Resources Defense Council. "It didn’t sound like it."

Because the composition of water varies so greatly, there's no one right way to do corrosion control, Olson said. But Flint's plan to use lime only should have prompted questions before switching to Flint River water.

"They definitely should have said, 'OK, what’s the basis of that decision? What’s your engineering study that shows that that’s optimizing your corrosion control?' " Olson said.

That Flint's river water would pass through pipes with lead components shouldn't have been surprising, Olson said -- the presence of lead in the water and sewage infrastructure is well-documented, and well-known.

So why didn't Flint's engineers account for that, when developing a treatment plan? That's just one of the questions I still can't answer.

http://www.detroitnews.com/story/news/local/michigan/2015/10/08/flint-health-experts-support-detroit-water-reconnection/73568654/

Flint health experts support Detroit water reconnection

Detroit News Staff and wire reports 7:58 a.m. EDT October 8, 2015

Flint — A committee of local experts in health, water and science has recommended that Flint reconnect to Detroit's water system.

Flint administrator Natasha Henderson urged the committee to not think about cost and decide "what's in the best interest" for Flint, which has a water crisis due to elevated levels of lead in children.

The Technical Advisory Committee met Wednesday. It rarely meets, but state officials say it will have a role in Flint's water quality. The committee has no formal role in deciding whether Flint stops using the Flint River for water.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. A Virginia Tech researcher says there would be dramatic reductions in about a month if the Detroit water system is used.

Gov. Rick Snyder's administration last week said it was considering temporarily reconnecting Flint to Detroit's water system temporarily in a bid to tackle the ongoing water quality and lead issues. The state also planned to expedite construction of a new water line to Lake Huron so a planned water authority that would service Flint could operate as soon as possible. An announcement on the Flint water plan was expected Thursday.

Sara Wurfel, a spokeswoman for Snyder, said the recommendation Wednesday "is an option we're helping thoroughly review and consider with the city, and the technical advisory committee's work is much appreciated in this matter. We're also focused on working hard in collaboration with all and implementing the key action steps outlined on Oct. 2 to help protect public health and ensure safe, accessible drinking water for Flint residents."

Since 2014, the Genesee County city has drawn its drinking water from the Flint River, which has led to major problems for residents.

Last month, the city issued an advisory about its drinking water after concerns surfaced about lead contamination.

On Tuesday, Snyder's administration made free water filters available for residents.

Meanwhile, Uber drivers began collecting donations of bottled water for Flint schools. And Mayor Dayne Walling this week said he gave to Flint Community Schools some 19 palettes Kroger grocers donated.

Uber, others join in efforts to pour clean water into Flint

By Jiquanda Johnson | jjohns16@mlive.com The Flint Journal Follow on Twitter on October 08, 2015 at 5:00 AM, updated October 08, 2015 at 5:06 AM

FLINT, MI -- Businesses, charities and individuals have donated thousands of bottles of water to city of Flint residents and students since last year after controversy erupted over the quality of the city's water. Here is a list of some of the donors.

- The United Way of Genesee County has actively participated in looking at ways to ease water woes in the city of Flint.

- ZeroWater partnered with United Way and Flint Community Schools early October to bring water filters to the school district as a solution instead of having students drink bottled water.

- Uber announced on Oct. 6 that drivers in Detroit will pick up donated bottles of water to bring to Flint throughout the week. People in Detroit just have to use their Uber link to notify drivers that water needs to be picked up. The initiative runs from 2 to 7 p.m. from Oct. 6 - 8.

- There was another donation of more than 4,000 gallons of bottled water through the Flint Diaper Bank and United Way of Genesee County on Oct. 7.

- Donations came in from Flint-area Home Depots and Sam's Club after Hurley Medical Center doctors revealed that lead levels in children in Flint had elevated after the city switched from Detroit's water source to the Flint River.

- Mott Community College issued an Oct. 7 media release saying they are donating bottled water to Pierce Elementary School on the city's north side on Oct. 8.

- Swan Valley High School in Saginaw is collecting bottled water to send to Flint Public Schools. The bottled water drive ends Oct. 9 and school officials are hoping to drop donations off to Flint Community Schools on Oct. 9.

- Bendle High School sophomore Chase Harrison raised money to purchase bottled water for Flint Community Schools.

- Lavish Living, a Flint-based organization, has donated at least 200 cases of water to Flint Community Schools. As of Oct. 6 the organization was still working to collect more water for students.

- The Flint Northwestern football team delivered an estimated

40 cases of water on Oct. 5 to Flint area residents between Dupont, Clio, Carpenter and Pierson roads.

•□□□□□□□□ General Motors Foundation

•□□□□□□□□ In January, Sargent Title Co. collected about 600 cases of water to donated to Flint residents.

•□□□□□□□□ Absopure Water Corp. donated a semi-truck worth of bottled water to Flint residents in January.

•□□□□□□□□ 1st Congregational United Church of Christ in Kalamazoo donated 4,000 bottles of water in September.

•□□□□□□□□ Al Serra Auto Plaza announced Oct. 7 that they will serve as drop off location for bottled water donations. If donors give 12 or more bottles of water, the dealership is offering free tire rotation.

•□□□□□□□□ In March, members of the Michigan National Action Network provided an estimated 10,000 bottles of water to Flint residents.

•□□□□□□□□ District leaders also expect at least 1,000 cases of bottled water to arrive at the Food Bank on Wednesday, Oct. 7, from the Saginaw Chippewa Indian Tribe and Soaring Eagle Waterpark and Hotel and Soaring Eagle Casino and Resort.

The Flint Journal will do updates as more donor names are provided. If anyone has donor information make a note of it in the comments section of this post, or email The Flint Journal at flnews@mlive.com.

Flint water crisis a bitter indictment of dysfunctional emergency manager

By Curt Guyette, Special to The Michigan Chronicle

Stark evidence of how terribly bad things can go when democracy is dismantled can be found in the elevated levels of lead in the children of Flint.

Because of decisions made by an appointed emergency manager, the tragically high costs of trying to balance a budget by switching to an unsafe water source will be borne by kids now forced to struggle with lower IQs, behavioral problems, learning disabilities, and a host of other ill effects.

This is what can happen when people are denied full access to representative government; they get poisoned by appointees with no connection to the community. Under Michigan's emergency manager law – PA 436 — gubernatorial appointees can leave town claiming to have successfully solved a fiscal crisis when in fact what they leave in their wake is a catastrophe of monumental proportions.

In recent days, as the lead problems in Flint have made international news, former Flint emergency manager Darnell Earley – the man in charge when the switch to the Flint River was made, and who is now overseeing the education of the children in Detroit Public Schools – has tried to deny any responsibility for the catastrophe.

According to the Detroit Free Press, Earley claimed in an e-mailed statement "that he was not involved in the decision to use river water."

The governor's office and Earley can rightfully claim that the Flint mayor and City Council initially gave their blessing to the switch made 18 months ago. But that fig leaf provides little real cover for the state officials now trying to run away from their disastrous decision.

For starters, it doesn't matter what the mayor and City Council had to say when the decision was made. The emergency manager, under the sweeping powers granted under Public Act 436, had complete authority to make the switch regardless of what Flint's elected officials wanted.

Moreover, those officials were in essence working for the emergency manager, not the people who elected them. The EM decided how much pay the mayor and council members drew, and how much power they could wield.

How do things go when appointed officials try to buck the control of an EM? As we've seen in Benton Harbor and Detroit Public Schools, the answer is that they get denuded of all power and are completely marginalized.

The message to elected officials under state control has been made perfectly clear: play ball with the EM, or else.

But there is another problem with the EM law as well, one made painfully obvious in Flint. In a normally-functioning democracy, when it came time for a city of Flint to conduct tests to show it is in compliance with federal drinking water regulations, the city would be an independent actor with the Michigan Department of Environmental Quality (MDEQ) serving as a separate check on the system, another independent actor providing oversight to make sure the job is done correctly.

Instead, with Governor Rick Snyder's man being the one in charge when the decision was made to start using river water – a decision that was almost instantly revealed to be fraught with problems – the MDEQ, instead of being a watchdog protecting the citizens of Flint, served as a collaborator, working with the city to do everything in their power to skew results so that their tests would make it appear that the water was safe when it wasn't.

How do we know it wasn't safe? Because grassroots citizen groups worked with researchers at Virginia Tech and the ACLU of Michigan to conduct an independent test of nearly 300 city homes and found that the problem was far worse than the city and state claimed.

When those results were released in mid-September, the response by the state was to try and discredit them. The same was true a week later, when a Hurley Children's Hospital study found the number of children with elevated lead levels doubled after the switch to the Flint River was made.

Those two studies, and the host of problems with the state and city's water testing, last week prompted the ACLU of Michigan, the Natural Resources Defense Council, and an array of civic groups to file a petition with the U.S. EPA, calling upon the federal government to come in and provide the oversight necessary to ensure Flint's water is clean and safe.

Finally, after the state's own data confirmed those findings, and Genesee County officials took the drastic step of declaring a public health emergency, the governor and MDEQ were forced to finally admit the truth and started taking some action.

But even if those measures are enough – and they may well not be, failing as they do to require a switch back to the much cleaner and far less corrosive Detroit system – the damage already caused by this governor and his emergency managers is irreversible for the children who will struggle for the rest of their lives because of the decisions made while Flint was under state control and democracy was suspended.

Snyder says Flint should reconnect to Detroit water

By John Wisely, Detroit Free Press 10:30 a.m. EDT October 8, 2015

Gov. Rick Snyder said today that Flint should reconnect to Detroit's water system to address the elevated lead levels in its drinking water system.

The connection would give Flint a better source than the Flint River, where it has been drawing its water since last year when it disconnected from Detroit. Flint has joined Genesee County in building a new pipeline from Lake Huron as part of the Karegnondi Water Authority, but that project isn't expect to come online until next year.

William Wolfson of the Detroit Water and Sewerage Department told the Free Press earlier this week that Detroit wouldn't charge any reconnection fee other than the labor costs associated with joining the pipes again.

At a news conference this morning, Snyder brought with him Dan Wyant of the Department of Health and Human Services and Dr. Eden Wells, chief medical executive at the department. Ridgway White of the Charles Stewart Mott Foundation also attended along with Flint Mayor Dayne Walling.

"I could hardly sleep knowing that our youngest and most vulnerable children were at risk," Walling said.

He said public confidence is an important part of public safety. He said the switch back to Detroit would be the fastest way to provide safe water.

Flint has been battling problems with its municipal drinking water system for more than year after disconnecting from the Detroit Water and Sewerage Department.

Flint had purchased water from Detroit for years, but long complained about the cost, which it hopes to reduce by piping its own water supply from Lake Huron and treating at its own plant.

The pipeline is under construction but in the meantime, the city has been drawing water from the Flint River to treat at its plant. Flint had been using the river as a backup source whenever there were disturbances in service from Detroit, but problems arose when it began using river water as its primary source.

Last year, the city found E. coli in the water and later rust and other materials that discolored it. Now the water coming into homes has been found to have elevated lead levels, prompting the current crisis, which has led to distribution of water filters across the city to avoid lead poisoning.

The water leaving the Flint Water Plant contains no lead, but experts believe its chemical composition causes corrosion in pipes and plumbing fixtures that do contain lead. That lead then comes out of faucets in homes and business across Flint, experts say.

On Wednesday, a technical advisory committee made up of experts in engineering, chemistry, public health and other fields recommended to the city that it reconnect to the Detroit water system until its own Lake Huron supply comes online.

http://www.mlive.com/news/flint/index.ssf/2015/10/governor_calls_for_16-million.html

Governor calls for $16M plan for Flint water crisis, switch to Detroit

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 08, 2015 at 11:44 AM, updated October 08, 2015 at 11:46 AM

FLINT, MI -- Gov. Rick Snyder has announced a $16-million plan to reduce lead in the city's drinking water, with most of the funding to reconnect Flint to the Detroit water system in as soon as two weeks.

"We believe it will be better for the citizens of Flint ... This is the city of Flint making the decision ... We're supporting that fully," said Snyder, who said he would ask the state Legislature for a total of $10 million to address the Flint water crisis.

The governor's plan calls for buying nine months of water from the Detroit Water and Sewerage Department with at least $6 million coming from the state, a $4-million grant from the Charles Stewart Mott Foundation, and $2 million from the city.

An additional $4 million will be requested from the state for efforts to address immediate lead issues, including further testing of children in Flint school buildings where the state this week found three buildings that tested above the federal limits for lead in the drinking water. One school tested at more than six times the limit.

Snyder's announcement comes on the heels of a recommendation by Flint's Technical Advisory Committee Wednesday, Oct. 8, to change the city's drinking water source and the declaration of a public health emergency last week because of rising levels of lead in both water and the blood of children and infants here.

Flint Mayor Dayne Walling said he will ask the City Council and Flint's Receivership Transition Advisory Board to approve the city's contribution to switch to Detroit-supplied water.

Walling said he "could hardly sleep" once he found out the extent of the city's lead problem two weeks ago.

It was two weeks ago that a Hurley Medical Center doctor released a study showing the percentage of Flint infants and children with above average lead levels has nearly doubled citywide since the switch to river water, and has nearly tripled among children in "high risk" areas of lead exposure.

Gov. Snyder moves to come up with $12 million to switch Flint's water back to Detroit's supply

Mark Brush, Michigan Radio • 30 minutes ago

Gov. Rick Snyder this morning held a press conference in which he said he supports reconnecting the city of Flint's water supply back to Detroit's water system.

Snyder said he will ask the Legislature to provide half ($6 million) of the $12 million bill to reconnect the system. The city of Flint will pay $2 million, and the Charles Stewart Mott Foundation will contribute $4 million.

Mayor Dayne Walling said he expects the city to reconnect to the Detroit system in two weeks.

Last year, Flint's state-appointed emergency manager, in a money saving move, ended the city's connection to Detroit's water supply and instead started using the Flint River for the city's water source.

Multiple problems with the city's water supply started soon after.

Independent research that found increasing lead levels in children in the city of Flint prompted government officials to act. The finding coincided with other independent findings of elevated levels of lead in the city's drinking water supply.

Virginia Tech researchers found Flint River water to be more corrosive to the city's old infrastructure. Lead leached from the old pipes into homes, schools, and businesses.

They say water from Detroit, which comes from Lake Huron, is less corrosive.

Snyder said the state is following the recommendation of the Flint water technical advisory committee that met yesterday. The committee recommended switching back to the Detroit system.

Detroit's water supply has been "optimized" to control for corrosion of drinking water supply pipes.

But switching over will not immediately resolve the problem. More from the state's press release:

However, reconnecting with the authority will not completely resolve the city's problem with lead service lines or aging infrastructure. It will take time for pipes in Flint to become coated with the phosphate corrosion control. Additionally, some households in the city could experience lead in their drinking water until all lead pipes and plumbing are replaced.

Marc Edwards, a water quality expert from Virginia Tech University and one of the main researchers who brought the city's lead problem to light, says he would expect lead levels to drop in one month after the switch back to Detroit water. However, as the lining of the water pipes has changed by running Flint River water through the system, the system will have to continually monitored.

In a statement, Flint Mayor Dayne Walling said making the switch is the quickest way to resolve the problem.

"Reconnecting to Detroit is the fastest way to deliver clean, safe water to Flint and stabilize the infrastructure system," Flint Mayor Dayne Walling said. "I appreciate the state, the Mott Foundation, Detroit, and the county's participation in a solution for Flint's water problems. The health and safety of Flint's families, children and seniors is my top priority, and reconnecting to Detroit is a major step that the city could not take alone given budget constraints."

In addition to the switch, state officials say they will continue to supply water filters to people in the city, offer free lead tests to Flint water customers, and hire more staff to continue health exposure monitoring in the city.

http://www.themorningsun.com/general-news/20151008/gov-rick-snyder-supports-switching-flint-water-system-back-to-detroit

Gov. Rick Snyder supports switching Flint water system back to Detroit

FLINT (AP) >> Michigan Gov. Rick Snyder called Thursday for Flint to switch back to Detroit's water system to address a public health emergency over the city's water supply.

Flint stopped using water from the Detroit system last year as a cost-cutting measure, opting instead for a supply direct from the Flint River. But since the swap, residents have complained of the water's funky smell, taste and appearance, and doctors discovered that the corrosive river water was drawing lead from aging pipes in some homes.

The governor announced Thursday that he would ask state lawmakers for $6 million, half of the $12 million need to reconnect Flint to Detroit's system through next summer. Then the city would transition to a new regional water authority drawing water from Lake Huron.

Snyder said Flint would provide $2 million and the Charles Stewart Mott Foundation has committed $4 million.

“It will be better for the citizens of Flint, in terms of public safety, which is our paramount concern,” he said at a news conference at the foundation’s office in Flint.

It is the “fastest way to protect public health and stabilize Flint’s water system,” Flint Mayor Dayne Walling said.

The announcement came a day after local experts in health, water and science recommended that Flint reconnect to Detroit’s water system while it awaits a new pipeline to Lake Huron.

The Snyder administration released results from a lead-screening program in schools and homes. Of 37 samples at 13 buildings, four samples spread over three buildings exceeded the federal action level of 15 parts per billion. Flint is under a public health emergency due to lead in the water supply.

State government and nonprofit groups have been distributing filters and bottled water to Flint homes and schools.

Snyder on Thursday also committed $3.5 million more for filters, free lead testing and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

Gov. Snyder says Flint should move back to Detroit water

10:44 AM, Oct 8, 2015

1 hour ago

LANSING, Mich. (WXYZ) - As the water crisis in Flint continues, Michigan Gov. Rick Snyder announced on Thursday that he believes Flint should move back to the Detroit water system.

According to the governor's office, Snyder said the city should use the Great Lakes Water Authority as the source of the drinking water until the Karegnondi Water Authority Pipeline is completed. The KWA controls the water system in Flint, and the pipeline is expected to be completed next summer.

Snyder said he would ask the state legislature to provide half of the $12 million that is needed to reconnect Flint with the Great Lakes Water Authority.

On top of that, Flint city government would have to provide $2 million and the Charles Stewart Mott Foundation has committed the other $4 million needed.

“All Flint residents need clean, safe drinking water,” Snyder said in a release. “The technical experts helping the city on its water advisory all agree this move back to the Great Lakes Water Authority provides the best public health protection for children and families.

Right now, Flint is under a public health emergency because of corrosive water with lead from old pipes.

According to Flint Mayor Dayne Walling, reconnecting back to Detroit is the "fastest way to deliver clean, safe water to Flint and stabilize the infrastructure system."

Reconnecting to the GLWA will not solve all of Flint's problems, according to Snyder. It will take time for the pipes to get coated with the phosphate corrosion control. Because of that, some houses in the city could have lead in their drinking water until all pipes and plumbing are replaced.

Free water filters are available for Flint residents. For those enrolled in Michigan Department of Health and Human Services assistance programs, you can get them at the 125 E. Union St. or 4809 Clio Rd. MDHHS locations.

Anyone not enrolled in MDHHS assistance programs can get the filters t the Genesee County Community Action Resource Department offices at 2727 Lippincott and 601 N. Saginaw in Flint.

Flint returning to Detroit water amid lead concerns

By Jason Hanna, CNN, Updated 10:39 AM ET, Thu October 8, 2015

(CNN)The Michigan city of Flint will return to Detroit's water system because of concerns over water quality -- including lead exposure -- after the city made a switch last year, Flint's mayor said Thursday.

Michigan Gov. Rick Snyder said he will ask the state legislature to provide $6 million to cover the estimated $12 million cost to reconnect Flint to Detroit's water system.

This is "the fastest way" to protect public health, Flint Mayor Dayne Walling told reporters at a news conference.

Thursday's announcement comes more than two weeks after a medical study, according to CNN affiliate WDIV, showed that the percentage of Flint children with elevated lead levels nearly doubled after Flint stopped using the Detroit water system.

The fight for clean water in Flint, Michigan

It isn't the government, but private citizens and researchers who have been battling to reveal dangerous lead levels

Azure Gilman, al Jazeera, October 8, 2015 8:18PM ET

Officials declared a public health emergency this month for Flint, Michigan, advising residents not to use the city's tap water without filtering after studies showed elevated lead levels in the water — and in children's blood.

But it was a handful of citizen activists and independent researchers who finally got the danger acknowledged, even as some officials denied there was a problem.

At a press conference on Thursday morning, Michigan governor Rick Snyder announced that after meeting with a technical advisory council, he was in full support of Flint returning to the Great Lakes Water Authority, from which the city previously got its water. Snyder said that the change would cost $12 million, and that he would ask the Michigan legislature to provide $6 million towards that cost. The Mott Foundation has said that they will cover $4 million, and the City of Flint will provide $2 million.

In April 2014, economically battered Flint switched its water source from Lake Huron to the less-expensive Flint River. Researchers at Virginia Tech say the new water is more corrosive and is leaching lead from pipes into the drinking water. After the switch, the number of children with elevated lead levels rose to 4 percent in 2015, from 2.1 percent in 2013, according to a study by a pediatrician at Hurley Medical Center in Flint. In some areas, that number rose as high as 6.3 percent from 2.5 percent.

One of the residents to raise an early alarm was LeeAnne Walters, after her 4-year-old son Gavin started breaking out in rashes in July 2014. He had to take Benadryl every time he took a bath, and Gavin was diagnosed with lead poisoning in April of 2015, Walters said.

The City of Flint, along with the Michigan Department of Environmental Quality (MDEQ), tested the water in Walters' home and found elevated lead levels. But Walters said that the city government denied anything was wrong with Flint's water.

"They went around and had meetings telling everyone that the problem was specific to my home due to my internal plumbing," Walters said. "It's infuriating. You're paying to be poisoned. And you're paying for this, and you're being called a liar and stupid by the emergency manager and the DEQ in a public meeting."

The MDEQ said Walters "had an unusually long lead service line, which appears to have contributed to her situation. However, this question is better addressed by the city." The City of Flint had not responded to a request for comment at the time of publication.

Flint Mayor Dayne Walling drank tap water on TV in July 2015 in an attempt to ease residents' concerns. He said that he and his family drink the city's water every day.

The City of Flint and the MDEQ tested the water after the switch to the Flint River, and said it was fine. But there were problems with those tests, residents and researchers said.

The MDEQ lowered the number of samples required to 60 from 100, according to Marc Edwards, who lead the water testing research team at Virginia Tech, and Curt Guyette, an investigative reporter with the American Civil Liberties Union of Michigan. A spokesman for the MDEQ, Brad Wurfel, said that the sample requirements are based on population, and that the requirement was lowered because new census data showed Flint's population had dropped below 100,000. He also cited difficulty in getting enough people to send in water sample kits for testing. "Participation has historically been a well-documented challenge in Flint," he said.

In a report [PDF] obtained through a Freedom of Information Act request, the City of Flint said that the homes they tested had lead pipes. But when Guyette confronted officials in September 2015 about how they were able to determine that every house tested had lead service lines, which run under city streets, a utilities administrator for the City of Flint said on camera: "We're not, really. We threw bottles out everywhere just to collect as many as we can to try to hit our number." He was referring to bottles used to collect water samples, and the number of homes they were required to sample.

"In essence they did their testing, and they got high lead, even though they didn't look at the homes they were supposed to," Edwards said. "They were supposed to look at homes with lead pipes, and they just randomly sent bottles out, which would make lead look lower than it is."

In late April of this year, LeeAnne Walters called Edwards, who said he then tested her water independently. In one sample, he said he found that she had lead levels of 13,200 parts per billion. The EPA allows a lead level of 15 parts per billion in tap water.

Along with fellow Flint resident Melissa Mays, Walters started an advocacy group called Water You Fighting For? Together with the ACLU of Michigan, Concerned Pastors for Social Action, and the Democracy Defense League, the activists helped get Edwards to come to Flint and conduct an independent analysis of the water.

Edwards said he paid for over $40,000 worth of testing out of his own pocket. He eventually got funding from the National Science Foundation to cover the cost. He said he sent water test kits to hundreds of homes, expecting to get 25 percent of the kits returned. But Water You Fighting For? and the other activist groups helped promote and organize the testing, and 90 percent came back.

"Achieving a 90 percent return rate was something I never thought possible," said Edwards.

Meanwhile, Dr. Mona Hanna-Attisha at Hurley Medical Center did her own study of blood lead levels in the children of Flint, and announced the results on Sept. 24. The study was not requested by the city or the state. Rather, Hanna-Attisha said she had heard from a friend at a dinner party that Flint had water problems. When she asked someone from Genesee County Health Department about it, she said she was told that that the department didn't control water.

“That's when I started my crusade,” she said.

The long-term repercussions of Flint's water problems could be devastating. The U.S. Centers for Disease Control and Prevention says that lead exposure in children is “particularly harmful to the developing brain,” and is associated with decreased intelligence, among many other symptoms. Hanna-Attisha said that Flint children could have long-term problems because of early lead poisoning.

“In five years there's going to be more kids who need early intervention and special education,” Hanna-Attisha said. “And in 15 to 20 years, there may be more kids that are going to be in the criminal justice system. The costs are tremendous… a whole generation of kids.”

As late as Sept. 28, The Associated Press quoted MDEQ spokesman Brad Wurfel as saying, “Flint's drinking water is safe in that it's meeting state and federal standards.”

In response to questions from Al Jazeera, Wurfel said that “the city, the state and the U.S. EPA are taking necessary steps to address lead concerns in Flint. Free lead filters for all Flint residents are a precautionary step to ensure public health while we look more closely at exposure concerns.”

Virginia Tech water expert Edwards said he is ashamed that Flint's water situation was allowed to happen in the United States. "I shudder to think what would have happened if the residents hadn't figured this out," Edwards said. "Because the kids would still be drinking this lead water, being encouraged to drink this lead water when it was not safe."

Gov. Snyder says he'll make announcement on Flint water Thursday

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 07, 2015 at 9:45 PM, updated October 08, 2015 at 8:08 AM

FLINT, MI -- Gov. Rick Snyder says on Twitter that he will make an announcement about Flint water at 10 a.m. Thursday.

The planned announcement comes less than 24 hours after Flint's Technical Advisory Committee recommended the city end its use of the Flint River as its water source.

Since making the switch from using pre-treated Lake Huron water from the city of Detroit to treating river water at its own plant in April 2014, Flint officials have struggled to maintain the quality and safety of water delivered to city residents.

Snyder's Twitter message says, "Watch live tomorrow at 10 a.m. as I make an announcement regarding Flint water" at mi.gov/SnyderLive.

The state's Web site says the governor will be joined by Flint Mayor Dayne Walling, other state officials, and Ridgway White of the Charles Stewart Mott Foundation.

High levels of lead in city water and in the blood of children and infants since the city changed its water source have triggered a public health emergency here, including the mass distribution of lead-clearing faucet filters and bottled water.

Researchers from Virginia Tech university say river water has proven to be far more corrosive than water from the Detroit Water and Sewerage Department, causing lead to leach into homes that have lead service lines.

Flint City Administrator Natasha Henderson said today, Oct. 7, that she believes the position of state officials has been shifting on continued use of the Flint River, a change that was made while Flint was being run by a state-appointed emergency manager.

"We're to the point that the state believes this is a public health emergency," Henderson told the City Council. "From what I see, the state is working very well with us."

The city administrator is among officials who have advocated for a return to buying water from the DWSD since a study was released last month by Hurley Medical Center's director of pediatric residency program.

The study showed the percentage of Flint infants and children with above average lead levels has nearly doubled citywide since the switch to river water, and has nearly tripled among children in "high risk" areas of lead exposure.

http://www.macombdaily.com/general-news/20151008/governor-plans-10-am-announcement-on-troubled-flint-water-system

Governor plans 10 a.m. announcement on troubled Flint water system

FLINT (AP) — Gov. Rick Snyder plans an announcement about the water system in Flint, which is facing a public health emergency over lead in its water.

A posting on the state's website says Snyder on Thursday morning will be joined for the announcement by officials including Flint Mayor Dayne Walling, state Department of Environmental Quality Director Dan Wyant and state Department of Health and Human Services Director Nick Lyon.

The announcement comes a day after a committee of local experts in health, water and science recommended Flint reconnect to Detroit's water system while it awaits a new pipeline to Lake Huron.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. State government and nonprofit groups are distributing filters and bottled water to Flint homes and schools.

Snyder's announcement can be viewed live at 10 a.m. Thursday, Oct. 8 by visiting http://1.usa.gov/1QapVxk

http://www.nytimes.com/2015/10/08/us/reassurances-end-in-flint-after-months-of-concern.html

Flint Officials Are No Longer Saying the Water Is Fine

By MONICA DAVEY, New York Times, OCT. 7, 2015

FLINT, Mich. — All along, through months of complaints from residents of this city about the peculiar colors and odors they said were coming from their faucets, the overriding message from the authorities here was that the water would be just fine.

Yes, there had been a boil order when fecal coliform bacteria turned up in some neighborhoods last year. And yes, the extra chlorine that was pumped in to solve that problem seemed to create another one — increased levels of a different contaminant.

Still, the guidance from Flint officials about the temporary water supply they switched to in 2014 — partly to save money — sounded assuring. In a notice sent to residents in July, city officials declared: "This is not an emergency. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours."

The soothing talk has vanished. In recent weeks, testing has shown increased levels of lead in the blood of some Flint children — and health officials pointed to the water as a possible source.

First, the city advised residents to run their water for five minutes before using it, to use only cold water for drinking and cooking, and to install lead-removing water filters. Then county officials issued an emergency advisory recommending that people not drink Flint's water unless it is tested for lead or filtered.

And last Friday, after corroborating that lead levels had risen in some children, state officials called for the water to be tested at all Flint public schools and for stepped-up efforts to replace lead service lines; they also promised $1 million to provide filters.

Officials met here on Wednesday afternoon, and talks were underway, officials said, for additional solutions that could come as early as Thursday. Gov. Rick Snyder said on Twitter late Wednesday that he planned to make an announcement about the situation on Thursday morning.

Private groups have raced to donate bottled water to schools, where the water fountains are now shut off, as well as filters to families who cannot afford them. Saying "we're just in a heck of a bind," Robert J. Pickell, the Genesee County sheriff, began serving bottled water and food that need not be cooked in water to hundreds of inmates in the county jail. Some residents have begun washing their children and pets with bottled water.

And Flint's mayor, Dayne Walling, who had attended a 2014 event to celebrate the switch to the new water supply, called for returning to the city's old water supply and urged state officials to provide millions of dollars to help pay for it.

The contaminated water was just the latest blow to Flint, an economically battered city that has struggled for years with factory closings, job losses and population decline.

Along Saginaw Street downtown, where at least one business had an “un-leaded” sign posted by a jug of water, residents had lingering questions: Would filters really do enough to make the water safe? What about unfiltered showers? Could they rely on the water at work and at restaurants? And why had it taken so long for leaders to figure out that there was a problem?

“I don’t think people know what’s going on at all,” said Chris Thornton, 49, who described the first blast of water from his faucets some days as looking like urine, smelling like bleach and tasting of metal. After his wife, Ronda, 50, felt sick to her stomach for months, the Thorntons began buying jugs of bottled water, though the price — on top of an already steep water bill — has been overwhelming.

“As far as my family,” Ronda Thornton said, “we’ve just given up on the city’s water.”

Flint’s water problems are tied inextricably to its fiscal woes. In 1960, nearly 200,000 people lived here. But auto plants closed, and the population has dropped by half. By 2011, Flint’s shrunken tax base and seemingly intractable budget problems prompted Mr. Snyder to appoint an emergency manager for the city. Over the next four years, the city had four managers overseeing operations. Along the way, the city switched its water supply.

For decades, the city bought water from Detroit, which treated water from Lake Huron, then piped it here, 70 miles to the northwest. But with the costs mounting, Flint’s leaders decided they could save millions by joining a new regional authority that would draw and treat its own water from Lake Huron.

There was one complication: Flint needed an alternative water supply from April 2014 until the new regional system is ready, probably next year. In the interim, Flint switched to using water from the Flint River, which state officials say had been a backup source in the past.

Ask residents about the Flint River, and many of them roll their eyes. They say it was once as a dumping ground for car parts, grocery carts and refrigerators. There have been significant improvements and intensive restoration campaigns in recent years, though a Flint River Fest set for Friday has been postponed, organizers said, given the “current drinking water crisis.”

Even now, state officials say that treated Flint River water is safe and capable of meeting state and federal standards. Officials say the problem may be that some of the aging pipes and service lines that carry water into Flint’s homes and businesses contain lead and are being corroded by water. The water Flint used to receive from Detroit was treated with chemicals intended to prevent such corrosion.

For months, questions about lead and other risks multiplied. “Everyone kept saying: ‘It’s safe! It’s safe! It’s safe!’ ” recalled Melissa Mays, a Flint resident who says she was sickened by the water and has helped organize residents over the issue.

Then in September, a researcher from Virginia Tech released findings from the water in hundreds of Flint homes showing elevated lead levels. Blood tests released by a local pediatrician — and corroborated last week by state officials analyzing their own testing — showed an increase in lead levels in children in some neighborhoods since 2014, when the city began drawing water from the river.

“We all have a concern about Flint’s drinking water in terms of what we’re seeing in terms of lead,” Mr. Snyder said last week.

Mr. Walling said that the move to river water occurred when an emergency manager controlled the city, though the City Council did vote for the city’s plans for a new, regional water system. He acknowledged supporting the move in a state of the city address, but said that he had not been given sufficient information about the safety risks.

“I had to work with what I knew at the time,” Mr. Walling, who is up for election next month, said in an interview.

But for many residents, the authorities failed the city by taking so long to react. “Anytime you have to weigh money against the health and welfare of people, it always has to be the health and welfare you go with,” said the Rev. Alfred Harris, a local pastor who has stopped conducting baptisms at his church because of concerns about the water. “We’ve been talking about this for the last 14 months, and they did not give a sincere ear to any of us. Shame on you!”

LeeAnne Walters said her son, Gavin, 4, who has immune system issues, had suffered direct consequences. After the switch to river water, which sometimes looked brown in their house, Gavin dropped to 27 pounds, far below the weight of his twin brother, she said. He sometimes seemed unable to pronounce words he knew, she said, and then test results showed an elevated lead level in his blood.

“He is going to deal with the side effects of this for the rest of his life,” Ms. Walters said. “I don’t think there’s a word angry enough to describe my anger. I trusted the city, and I helped the city poison my kid. Who thought this could happen in the United States?”

Waiting for answers, action in Flint water crisis

By Nancy Kaffer, Detroit Free Press Columnist 10:27 p.m. EDT October 7, 2015

They are still waiting for answers about the water in Flint.

And it's hard to say when, or if, those answers are coming.

It has been two weeks since a hospital researcher found that more Flint kids had been lead poisoned since the city switched its municipal water supply. And it has been nearly a week since the State of Michigan abruptly changed its posture, acknowledging, after months of denial and empty assurances, that Flint's water supply was compromised.

Since then, a lot of folks have worked diligently to sort out how things went so badly wrong in this small, impoverished city, and what the State of Michigan is doing to fix it.

But solutions remain elusive.

The state announced Friday that it has devoted $1 million to provide water filters for Flint residents, is expanding water testing and expediting improved water treatment. But two weeks on, Flint hasn't started adding chemicals to its water that would allow it to pass safely through the city's lead service pipes. That plan can likely be ready within a week, and can be enacted as soon as it's approved by the Michigan Department of Environmental Quality. Scientists say it would take roughly a month before those chemicals would begin to effect Flint's drinking water.

That would be the right play, unless the city opts to rejoin the Detroit Water and Sewerage Department -- as water experts have recommended -- a decision that would likely require financial assistance from the State of Michigan but could result in potable water flowing from Flint taps within two weeks. Is it likely to happen? Your guess is as good as mine.

And state officials continue to insist that the rules designed to monitor water systems, to ensure safe drinking water, worked as they're supposed to.

Kids in danger

The effects of lead on children are irreversible. Lead-poisoned kids can experience a host of behavioral and developmental problems, and in two Flint ZIP codes, the percentage of children affected by lead has doubled, reversing a long trend of improving rates.

That's because in 2014, Flint decided to pump untreated water from the Flint River, ending a decades-long relationship with the Detroit Water and Sewerage Department, while a new regional water authority it's joining is under construction. Since then, Flint's been treating its water locally, prompting a rash of problems related to coliform bacteria, a disinfectant and its byproduct, and now, elevated lead.

Both of these decisions were made while Flint was under state oversight, during the appointments of a series of emergency managers appointed by and answerable to Gov. Rick Snyder. The Michigan Department of Environmental Quality, whose director is appointed by the governor, must ensure that water systems are producing safe drinking water. Because Flint's water decisions were made under Snyder's emergency managers, the governor's decision-making authority is one step closer to Flint's water crisis.

The water Flint bought from Detroit was "finished," in other words, safe for humans to drink, but also treated to create a film inside those pipes that kept the lead out. That's called "corrosion control," and Detroit achieved this goal by adding phosphates to the water it pumps from Lake Huron.

Flint doesn't.

It took an unreasonably long time to get a solid answer to this question.

Corrosion control

Since April 2014, treatment at Flint's plant has included adding lime to the water it distributed to customers, largely to make the water less acidic, Liane Shekter Smith, chief of the MDEQ's office of drinking water and municipal assistance, said Tuesday.

"There was no corrosion control plan put forward at the time of the switch," Shekter Smith said. "There was a belief that (acidity) adjustment would provide adequate corrosion control, and that rounds of testing would confirm or refute that."

Any new water supply must be tested at six-month intervals to determine whether it meets the guidelines of the federal lead and copper rule, a standard established by the U.S. Environmental Protection Agency.

Tests of Flint's drinking water showed roughly 6 parts per billion (how the presence of lead in water is reckoned) in water sampled between June and December of 2014, said MDEQ spokesman Brad Wurfel. The U.S. Centers for Disease Control and Prevention said there is no acceptable level of lead exposure, but 6 ppb would, in some cases, fall below the EPA's actionable level of 15 ppb.

But because the community Flint serves is so large, it must meet a different threshold, 5 ppb. If a second round of testing showed that lead levels continued to exceed it, Flint would be required to improve its method of corrosion control.

Water sampled between January and June of 2015 showed an alarming increase: lead levels had risen to 11 ppb.

That kind of testing, Shekter Smith said, is the most reliable way to determine whether corrosion control is working.

"Having it in place is best way to know what is happening out in the system," she said.

Given the elevated blood-lead levels in Flint kids, the damage lead can cause, and the permanence of that damage, is that enough?

"I think that we are following the protocol," she said, "and the protocol got us to the right place, and we're making the right decisions."

“It did?" said Erik Olson, a senior strategy director for the Washington, D.C.-based Natural Resources Defense Council. "It didn’t sound like it."

Because the composition of water varies so greatly, there's no one right way to do corrosion control, Olson said. But Flint's plan to use lime only should have prompted questions before switching to Flint River water.

"They definitely should have said, 'OK, what’s the basis of that decision? What’s your engineering study that shows that that’s optimizing your corrosion control?' " Olson said.

That Flint's river water would pass through pipes with lead components shouldn't have been surprising, Olson said -- the presence of lead in the water and sewage infrastructure is well-documented, and well-known.

So why didn't Flint's engineers account for that, when developing a treatment plan? That's just one of the questions I still can't answer.

Flint health experts support Detroit water reconnection

Detroit News Staff and wire reports 7:58 a.m. EDT October 8, 2015

Flint — A committee of local experts in health, water and science has recommended that Flint reconnect to Detroit's water system.

Flint administrator Natasha Henderson urged the committee to not think about cost and decide "what's in the best interest" for Flint, which has a water crisis due to elevated levels of lead in children.

The Technical Advisory Committee met Wednesday. It rarely meets, but state officials say it will have a role in Flint's water quality. The committee has no formal role in deciding whether Flint stops using the Flint River for water.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. A Virginia Tech researcher says there would be dramatic reductions in about a month if the Detroit water system is used.

Gov. Rick Snyder's administration last week said it was considering temporarily reconnecting Flint to Detroit's water system temporarily in a bid to tackle the ongoing water quality and lead issues. The state also planned to expedite construction of a new water line to Lake Huron so a planned water authority that would service Flint could operate as soon as possible. An announcement on the Flint water plan was expected Thursday.

Sara Wurfel, a spokeswoman for Snyder, said the recommendation Wednesday "is an option we're helping thoroughly review and consider with the city, and the technical advisory committee's work is much appreciated in this matter. We're also focused on working hard in collaboration with all and implementing the key action steps outlined on Oct. 2 to help protect public health and ensure safe, accessible drinking water for Flint residents."

Since 2014, the Genesee County city has drawn its drinking water from the Flint River, which has led to major problems for residents.

Last month, the city issued an advisory about its drinking water after concerns surfaced about lead contamination.

On Tuesday, Snyder’s administration made free water filters available for residents.

Meanwhile, Uber drivers began collecting donations of bottled water for Flint schools. And Mayor Dayne Walling this week said he gave to Flint Community Schools some 19 palettes Kroger grocers donated.

Uber, others join in efforts to pour clean water into Flint

By Jiquanda Johnson | jjohns16@mlive.com The Flint Journal Follow on Twitter on October 08, 2015 at 5:00 AM, updated October 08, 2015 at 5:06 AM

FLINT, MI -- Businesses, charities and individuals have donated thousands of bottles of water to city of Flint residents and students since last year after controversy erupted over the quality of the city's water. Here is a list of some of the donors.

•□□□□□□□□ The United Way of Genesee County has actively participated in looking at ways to ease water woes in the city of Flint.

•□□□□□□□□ ZeroWater partnered with United Way and Flint Community Schools early October to bring water filters to the school district as a solution instead of having students drink bottled water.

•□□□□□□□□ Uber announced on Oct. 6 that drivers in Detroit will pick up donated bottles of water to bring to Flint throughout the week. People in Detroit just have to use their Uber link to notify drivers that water needs to be picked up. The initiative runs from 2 to 7 p.m. from Oct. 6 - 8.

- There was another donation of more than 4,000 gallons of bottled water through the Flint Diaper Bank and United Way of Genesee County on Oct. 7.

- Donations came in from Flint-area Home Depots and Sam's Club after Hurley Medical Center doctors revealed that lead levels in children in Flint had elevated after the city switched from Detroit's water source to the Flint River.

- Mott Community College issued an Oct. 7 media release saying they are donating bottled water to Pierce Elementary School on the city's north side on Oct. 8.

- Swan Valley High School in Saginaw is collecting bottled water to send to Flint Public Schools. The bottled water drive ends Oct. 9 and school officials are hoping to drop donations off to Flint Community Schools on Oct. 9.

- Bendle High School sophomore Chase Harrison raised money to purchase bottled water for Flint Community Schools.

- Lavish Living, a Flint-based organization, has donated at least 200 cases of water to Flint Community Schools. As of Oct. 6 the organization was still working to collect more water for students.

- The Flint Northwestern football team delivered an estimated 40 cases of water on Oct. 5 to Flint area residents between Dupont, Clio, Carpenter and Pierson roads.

- General Motors Foundation

- In January, Sargent Title Co. collected about 600 cases of water to donated to Flint residents.

- Absopure Water Corp. donated a semi-truck worth of bottled water to Flint residents in January.

- 1st Congregational United Church of Christ in Kalamazoo donated 4,000 bottles of water in September.

- Al Serra Auto Plaza announced Oct. 7 that they will serve as drop off location for bottled water donations. If donors give 12 or more bottles of water, the dealership is offering free tire rotation.

- In March, members of the Michigan National Action Network provided an estimated 10,000 bottles of water to Flint residents.

•□□□□□□□□ District leaders also expect at least 1,000 cases of bottled water to arrive at the Food Bank on Wednesday, Oct. 7, from the Saginaw Chippewa Indian Tribe and Soaring Eagle Waterpark and Hotel and Soaring Eagle Casino and Resort.

The Flint Journal will do updates as more donor names are provided. If anyone has donor information make a note of it in the comments section of this post, or email The Flint Journal at flnews@mlive.com.

http://michronicleonline.com/2015/10/07/flint-water-crisis-a-bitter-indictment-of-dysfunctional-emergency-manager/

Flint water crisis a bitter indictment of dysfunctional emergency manager

By Curt Guyette, Special to The Michigan Chronicle

Stark evidence of how terribly bad things can go when democracy is dismantled can be found in the elevated levels of lead in the children of Flint.

Because of decisions made by an appointed emergency manager, the tragically high costs of trying to balance a budget by switching to an unsafe water source will be borne by kids now forced to struggle with lower IQs, behavioral problems, learning disabilities, and a host of other ill effects.

This is what can happen when people are denied full access to representative government; they get poisoned by appointees with no connection to the community. Under Michigan's emergency manager law – PA 436 — gubernatorial appointees can leave town claiming to have successfully solved a fiscal crisis when in fact what they leave in their wake is a catastrophe of monumental proportions.

In recent days, as the lead problems in Flint have made international news, former Flint emergency manager Darnell Earley – the man in charge when the switch to the Flint River was made, and who is now overseeing the education of the children in Detroit Public Schools – has tried to deny any responsibility for the catastrophe.

According to the Detroit Free Press, Earley claimed in an e-mailed statement “that he was not involved in the decision to use river water.”

The governor’s office and Earley can rightfully claim that the Flint mayor and City Council initially gave their blessing to the switch made 18 months ago. But that fig leaf provides little real cover for the state officials now trying to run away from their disastrous decision.

For starters, it doesn’t matter what the mayor and City Council had to say when the decision was made. The emergency manager, under the sweeping powers granted under Public Act 436, had complete authority to make the switch regardless of what Flint’s elected officials wanted.

Moreover, those officials were in essence working for the emergency manager, not the people who elected them. The EM decided how much pay the mayor and council members drew, and how much power they could wield.

How do things go when appointed officials try to buck the control of an EM? As we’ve seen in Benton Harbor and Detroit Public Schools, the answer is that they get denuded of all power and are completely marginalized.

The message to elected officials under state control has been made perfectly clear: play ball with the EM, or else.

But there is another problem with the EM law as well, one made painfully obvious in

Flint. In a normally-functioning democracy, when it came time for a city of Flint to conduct tests to show it is in compliance with federal drinking water regulations, the city would be an independent actor with the Michigan Department of Environmental Quality (MDEQ) serving as a separate check on the system, another independent actor providing oversight to make sure the job is done correctly.

Instead, with Governor Rick Snyder's man being the one in charge when the decision was made to start using river water – a decision that was almost instantly revealed to be fraught with problems – the MDEQ, instead of being a watchdog protecting the citizens of Flint, served as a collaborator, working with the city to do everything in their power to skew results so that their tests would make it appear that the water was safe when it wasn't.

How do we know it wasn't safe? Because grassroots citizen groups worked with researchers at Virginia Tech and the ACLU of Michigan to conduct an independent test of nearly 300 city homes and found that the problem was far worse than the city and state claimed.

When those results were released in mid-September, the response by the state was to try and discredit them. The same was true a week later, when a Hurley Children's Hospital study found the number of children with elevated lead levels doubled after the switch to the Flint River was made.

Those two studies, and the host of problems with the state and city's water testing, last week prompted the ACLU of Michigan, the Natural Resources Defense Council, and an array of civic groups to file a petition with the U.S. EPA, calling upon the federal government to come in and provide the oversight necessary to ensure Flint's water is clean and safe.

Finally, after the state's own data confirmed those findings, and Genesee County officials took the drastic step of declaring a public health emergency, the governor and MDEQ were forced to finally admit the truth and started taking some action.

But even if those measures are enough – and they may well not be, failing as they do to require a switch back to the much cleaner and far less corrosive Detroit system – the damage already caused by this governor and his emergency managers is irreversible for the children who will struggle for the rest of their lives because of the decisions made while Flint was under state control and democracy was suspended.

Snyder says Flint should reconnect to Detroit water

By John Wisely, Detroit Free Press 10:30 a.m. EDT October 8, 2015

Gov. Rick Snyder said today that Flint should reconnect to Detroit's water system to address the elevated lead levels in its drinking water system.

The connection would give Flint a better source than the Flint River, where it has been drawing its water since last year when it disconnected from Detroit. Flint has joined Genesee County in building a new pipeline from Lake Huron as part of the Karegnondi Water Authority, but that project isn't expect to come online until next year.

William Wolfson of the Detroit Water and Sewerage Department told the Free Press earlier this week that Detroit wouldn't charge any reconnection fee other than the labor costs associated with joining the pipes again.

At a news conference this morning, Snyder brought with him Dan Wyant of the Department of Health and Human Services and Dr. Eden Wells, chief medical executive at the department. Ridgway White of the Charles Stewart Mott Foundation also attended along with Flint Mayor Dayne Walling.

"I could hardly sleep knowing that our youngest and most vulnerable children were at risk," Walling said.

He said public confidence is an important part of public safety. He said the switch back to Detroit would be the fastest way to provide safe water.

Flint has been battling problems with its municipal drinking water system for more than year after disconnecting from the Detroit Water and Sewerage Department.

Flint had purchased water from Detroit for years, but long complained about the cost, which it hopes to reduce by piping its own water supply from Lake Huron and treating at its own plant.

The pipeline is under construction but in the meantime, the city has been drawing water from the Flint River to treat at its plant. Flint had been using the river as a backup source whenever there were disturbances in service from Detroit, but problems arose when it began using river water as its primary source.

Last year, the city found E. coli in the water and later rust and other materials that discolored it. Now the water coming into homes has been found to have elevated lead levels, prompting the current crisis, which has led to distribution of water filters across the city to avoid lead poisoning.

The water leaving the Flint Water Plant contains no lead, but experts believe its chemical composition causes corrosion in pipes and plumbing fixtures that do contain lead. That lead then comes out of faucets in homes and business across Flint, experts say.

On Wednesday, a technical advisory committee made up of experts in engineering, chemistry, public health and other fields recommended to the city that it reconnect to the Detroit water system until its own Lake Huron supply comes online.

http://www.mlive.com/news/flint/index.ssf/2015/10/governor_calls_for_16-million.html

Governor calls for $16M plan for Flint water crisis, switch to Detroit

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 08, 2015 at 11:44 AM, updated October 08, 2015 at 11:46 AM

FLINT, MI -- Gov. Rick Snyder has announced a $16-million plan to reduce lead in the city's drinking water, with most of the funding to reconnect Flint to the Detroit water system in as soon as two weeks.

"We believe it will be better for the citizens of Flint ... This is the city of Flint making the decision ... We're supporting that fully," said Snyder, who said he would ask the state Legislature for a total of $10 million to address the Flint water crisis.

The governor's plan calls for buying nine months of water from the Detroit Water and Sewerage Department with at least $6 million coming from the state, a $4-million grant from the Charles Stewart Mott Foundation, and $2 million from the city.

An additional $4 million will be requested from the state for efforts to address immediate lead issues, including further testing of children in Flint school buildings where the state this week found three buildings that tested above the federal limits for lead in the drinking water. One school tested at more than six times the limit.

Snyder's announcement comes on the heels of a recommendation by Flint's Technical Advisory Committee Wednesday, Oct. 8, to change the city's drinking water source and the declaration of a public health emergency last week because of rising levels of lead in both water and the blood of children and infants here.

Flint Mayor Dayne Walling said he will ask the City Council and Flint's Receivership Transition Advisory Board to approve the city's contribution to switch to Detroit-supplied water.

Walling said he "could hardly sleep" once he found out the extent of the city's lead problem two weeks ago.

It was two weeks ago that a Hurley Medical Center doctor released a study showing the percentage of Flint infants and children with above average lead levels has nearly doubled citywide since the switch to river water, and has nearly tripled among children in "high risk" areas of lead exposure.

http://michiganradio.org/post/gov-snyder-moves-come-12-million-switch-flints-water-back-detroits-supply#stream/0

Gov. Snyder moves to come up with $12 million to switch Flint's water back to Detroit's supply

Mark Brush, Michigan Radio • 30 minutes ago

Gov. Rick Snyder this morning held a press conference in which he said he supports reconnecting the city of Flint's water supply back to Detroit's water system.

Snyder said he will ask the Legislature to provide half ($6 million) of the $12 million bill to reconnect the system. The city of Flint will pay $2 million, and the Charles Stewart Mott Foundation will contribute $4 million.

Mayor Dayne Walling said he expects the city to reconnect to the Detroit system in two weeks.

Last year, Flint's state-appointed emergency manager, in a money saving move, ended the city's connection to Detroit's water supply and instead started using the Flint River for the city's water source.

Multiple problems with the city's water supply started soon after.

Independent research that found increasing lead levels in children in the city of Flint prompted government officials to act. The finding coincided with other independent findings of elevated levels of lead in the city's drinking water supply.

Virginia Tech researchers found Flint River water to be more corrosive to the city's old infrastructure. Lead leached from the old pipes into homes, schools, and businesses.

They say water from Detroit, which comes from Lake Huron, is less corrosive.

Snyder said the state is following the recommendation of the Flint water technical advisory committee that met yesterday. The committee recommended switching back to the Detroit system.

Detroit's water supply has been "optimized" to control for corrosion of drinking water supply pipes.

But switching over will not immediately resolve the problem. More from the state's press release:

However, reconnecting with the authority will not completely resolve the city's problem with lead service lines or aging infrastructure. It will take time for pipes in Flint to become coated with the phosphate corrosion control. Additionally, some households in the city could experience lead in their drinking water until all lead pipes and plumbing are replaced.

Marc Edwards, a water quality expert from Virginia Tech University and one of the main researchers who brought the city's lead problem to light, says he would expect lead levels to drop in one month after the switch back to Detroit water. However, as the lining of the water pipes has changed by running Flint River water through the system, the system will have to continually monitored.

In a statement, Flint Mayor Dayne Walling said making the switch is the quickest way to resolve the problem.

"Reconnecting to Detroit is the fastest way to deliver clean, safe water to Flint and stabilize the infrastructure system," Flint Mayor Dayne Walling said. "I appreciate the state, the Mott Foundation, Detroit, and the county's participation in a solution for Flint's water problems. The health and safety of Flint's families, children and seniors is my top priority, and reconnecting to Detroit is a major step that the city could not take alone given budget constraints."

In addition to the switch, state officials say they will continue to supply water filters to people in the city, offer free lead tests to Flint water customers, and hire more staff to continue health exposure monitoring in the city.

http://www.themorningsun.com/general-news/20151008/gov-rick-snyder-supports-switching-flint-water-system-back-to-detroit

Gov. Rick Snyder supports switching Flint water system back to Detroit

FLINT (AP) >> Michigan Gov. Rick Snyder called Thursday for Flint to switch back to Detroit's water system to address a public health emergency over the city's water supply.

Flint stopped using water from the Detroit system last year as a cost-cutting measure, opting instead for a supply direct from the Flint River. But since the swap, residents have complained of the water's funky smell, taste and appearance, and doctors discovered that the corrosive river water was drawing lead from aging pipes in some homes.

The governor announced Thursday that he would ask state lawmakers for $6 million, half of the $12 million need to reconnect Flint to Detroit's system through next summer. Then the city would transition to a new regional water authority drawing water from Lake Huron.

Snyder said Flint would provide $2 million and the Charles Stewart Mott Foundation has committed $4 million.

"It will be better for the citizens of Flint, in terms of public safety, which is our paramount concern," he said at a news conference at the foundation's office in Flint.

It is the "fastest way to protect public health and stabilize Flint's water system," Flint Mayor Dayne Walling said.

The announcement came a day after local experts in health, water and science recommended that Flint reconnect to Detroit's water system while it awaits a new pipeline to Lake Huron.

The Snyder administration released results from a lead-screening program in schools and homes. Of 37 samples at 13 buildings, four samples spread over three buildings exceeded the federal action level of 15 parts per billion. Flint is under a public health emergency due to lead in the water supply.

State government and nonprofit groups have been distributing filters and bottled water to Flint homes and schools.

Snyder on Thursday also committed $3.5 million more for filters, free lead testing and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

Gov. Snyder says Flint should move back to Detroit water

10:44 AM, Oct 8, 2015

1 hour ago

LANSING, Mich. (WXYZ) - As the water crisis in Flint continues, Michigan Gov. Rick Snyder announced on Thursday that he believes Flint should move back to the Detroit water system.

According to the governor's office, Snyder said the city should use the Great Lakes Water Authority as the source of the drinking water until the Karegnondi Water Authority Pipeline is completed. The KWA controls the water system in Flint, and the pipeline is expected to be completed next summer.

Snyder said he would ask the state legislature to provide half of the $12 million that is needed to reconnect Flint with the Great Lakes Water Authority.

On top of that, Flint city government would have to provide $2 million and the Charles Stewart Mott Foundation has committed the other $4 million needed.

“All Flint residents need clean, safe drinking water,” Snyder said in a release. “The technical experts helping the city on its water advisory all agree this move back to the Great Lakes Water Authority provides the best public health protection for children and families.

Right now, Flint is under a public health emergency because of corrosive water with lead from old pipes.

According to Flint Mayor Dayne Walling, reconnecting back to Detroit is the "fastest way to deliver clean, safe water to Flint and stabilize the infrastructure system."

Reconnecting to the GLWA will not solve all of Flint's problems, according to Snyder. It will take time for the pipes to get coated with the phosphate corrosion control. Because of that, some houses in the city could have lead in their drinking water until all pipes and plumbing are replaced.

Free water filters are available for Flint residents. For those enrolled in Michigan Department of Health and Human Services assistance programs, you can get them at the 125 E. Union St. or 4809 Clio Rd. MDHHS locations.

Anyone not enrolled in MDHHS assistance programs can get the filters t the Genesee County Community Action Resource Department offices at 2727 Lippincott and 601 N. Saginaw in Flint.

Flint returning to Detroit water amid lead concerns

By Jason Hanna, CNN, Updated 10:39 AM ET, Thu October 8, 2015

(CNN)The Michigan city of Flint will return to Detroit's water system because of concerns over water quality -- including lead exposure -- after the city made a switch last year, Flint's mayor said Thursday.

Michigan Gov. Rick Snyder said he will ask the state legislature to provide $6 million to cover the estimated $12 million cost to reconnect Flint to Detroit's water system.

This is "the fastest way" to protect public health, Flint Mayor Dayne Walling told reporters at a news conference.

Thursday's announcement comes more than two weeks after a medical study, according to CNN affiliate WDIV, showed that the percentage of Flint children with elevated lead levels nearly doubled after Flint stopped using the Detroit water system.

The fight for clean water in Flint, Michigan

It isn't the government, but private citizens and researchers who have been battling to reveal dangerous lead levels

Azure Gilman, al Jazeera, October 8, 2015 8:18PM ET

Officials declared a public health emergency this month for Flint, Michigan, advising residents not to use the city's tap water without filtering after studies showed elevated lead levels in the water — and in children's blood.

But it was a handful of citizen activists and independent researchers who finally got the danger acknowledged, even as some officials denied there was a problem.

At a press conference on Thursday morning, Michigan governor Rick Snyder announced that after meeting with a technical advisory council, he was in full support of Flint returning to the Great Lakes Water Authority, from which the city previously got its water. Snyder said that the change would cost $12 million, and that he would ask the Michigan legislature to provide $6 million towards that cost. The Mott Foundation has said that they will cover $4 million, and the City of Flint will provide $2 million.

In April 2014, economically battered Flint switched its water source from Lake Huron to the less-expensive Flint River. Researchers at Virginia Tech say the new water is more corrosive and is leaching lead from pipes into the drinking water. After the switch, the number of children with elevated lead levels rose to 4 percent in 2015, from 2.1 percent in 2013, according to a study by a pediatrician at Hurley Medical Center in Flint. In some areas, that number rose as high as 6.3 percent from 2.5 percent.

One of the residents to raise an early alarm was LeeAnne Walters, after her 4-year-old son Gavin started breaking out in rashes in July 2014. He had to take Benadryl every time he took a bath, and Gavin was diagnosed with lead poisoning in April of 2015, Walters said.

The City of Flint, along with the Michigan Department of Environmental Quality (MDEQ), tested the water in Walters' home and found elevated lead levels. But Walters said that the city government denied anything was wrong with Flint's water.

“They went around and had meetings telling everyone that the problem was specific to my home due to my internal plumbing,” Walters said. "It’s infuriating. You're paying to be poisoned. And you're paying for this, and you're being called a liar and stupid by the emergency manager and the DEQ in a public meeting."

The MDEQ said Walters “had an unusually long lead service line, which appears to have contributed to her situation. However, this question is better addressed by the city.” The City of Flint had not responded to a request for comment at the time of publication.

Flint Mayor Dayne Walling drank tap water on TV in July 2015 in an attempt to ease residents’ concerns. He said that he and his family drink the city’s water every day.

The City of Flint and the MDEQ tested the water after the switch to the Flint River, and said it was fine. But there were problems with those tests, residents and researchers said.

The MDEQ lowered the number of samples required to 60 from 100, according to Marc Edwards, who lead the water testing research team at Virginia Tech, and Curt Guyette, an investigative reporter with the American Civil Liberties Union of Michigan. A spokesman for the MDEQ, Brad Wurfel, said that the sample requirements are based on population, and that the requirement was lowered because new census data showed Flint’s population had dropped below 100,000. He also cited difficulty in getting enough people to send in water sample kits for testing. “Participation has historically been a well-documented challenge in Flint,” he said.

In a report [PDF] obtained through a Freedom of Information Act request, the City of Flint said that the homes they tested had lead pipes. But when Guyette confronted officials in September 2015 about how they were able to determine that every house tested had lead service lines, which run under city streets, a utilities administrator for the City of Flint said on camera: “We’re not, really. We threw bottles out everywhere just to collect as many as we can to try to hit our number.” He was referring to bottles used to collect water samples, and the number of homes they were required to sample.

“In essence they did their testing, and they got high lead, even though they didn’t look at the homes they were supposed to,” Edwards said. “They were supposed to look at homes with lead pipes, and they just randomly sent bottles out, which would make lead look lower than it is.”

In late April of this year, LeeAnne Walters called Edwards, who said he then tested her water independently. In one sample, he said he found that she had lead levels of 13,200 parts per billion. The EPA allows a lead level of 15 parts per billion in tap water.

Along with fellow Flint resident Melissa Mays, Walters started an advocacy group called Water You Fighting For? Together with the ACLU of Michigan, Concerned Pastors for Social Action, and the Democracy Defense League, the activists helped get Edwards to come to Flint and conduct an independent analysis of the water.

Edwards said he paid for over $40,000 worth of testing out of his own pocket. He eventually got funding from the National Science Foundation to cover the cost. He said he sent water test kits to hundreds of homes, expecting to get 25 percent of the kits returned. But Water You Fighting For? and the other activist groups helped promote and organize the testing, and 90 percent came back.

"Achieving a 90 percent return rate was something I never thought possible," said Edwards.

Meanwhile, Dr. Mona Hanna-Attisha at Hurley Medical Center did her own study of blood lead levels in the children of Flint, and announced the results on Sept. 24. The study was not requested by the city or the state. Rather, Hanna-Attisha said she had heard from a friend at a dinner party that Flint had water problems. When she asked someone from Genesee County Health Department about it, she said she was told that that the department didn’t control water.

“That’s when I started my crusade,” she said.

The long-term repercussions of Flint's water problems could be devastating. The U.S. Centers for Disease Control and Prevention says that lead exposure in children is "particularly harmful to the developing brain," and is associated with decreased intelligence, among many other symptoms. Hanna-Attisha said that Flint children could have long-term problems because of early lead poisoning.

"In five years there's going to be more kids who need early intervention and special education," Hanna-Attisha said. "And in 15 to 20 years, there may be more kids that are going to be in the criminal justice system. The costs are tremendous… a whole generation of kids."

As late as Sept. 28, The Associated Press quoted MDEQ spokesman Brad Wurfel as saying, "Flint's drinking water is safe in that it's meeting state and federal standards."

In response to questions from Al Jazeera, Wurfel said that "the city, the state and the U.S. EPA are taking necessary steps to address lead concerns in Flint. Free lead filters for all Flint residents are a precautionary step to ensure public health while we look more closely at exposure concerns."

Virginia Tech water expert Edwards said he is ashamed that Flint's water situation was allowed to happen in the United States. "I shudder to think what would have happened if the residents hadn't figured this out," Edwards said. "Because the kids would still be drinking this lead water, being encouraged to drink this lead water when it was not safe."

Gov. Snyder says he'll make announcement on Flint water Thursday

By Ron Fonger | rfonger1@mlive.com The Flint Journal on October 07, 2015 at 9:45 PM, updated October 08, 2015 at 8:08 AM

FLINT, MI -- Gov. Rick Snyder says on Twitter that he will make an announcement about Flint water at 10 a.m. Thursday.

The planned announcement comes less than 24 hours after Flint's Technical Advisory Committee recommended the city end its use of the Flint River as its water source.

Since making the switch from using pre-treated Lake Huron water from the city of Detroit to treating river water at its own plant in April 2014, Flint officials have struggled to maintain the quality and safety of water delivered to city residents.

Snyder's Twitter message says, "Watch live tomorrow at 10 a.m. as I make an announcement regarding Flint water" at mi.gov/SnyderLive.

The state's Web site says the governor will be joined by Flint Mayor Dayne Walling, other state officials, and Ridgway White of the Charles Stewart Mott Foundation.

High levels of lead in city water and in the blood of children and infants since the city changed its water source have triggered a public health emergency here, including the mass distribution of lead-clearing faucet filters and bottled water.

Researchers from Virginia Tech university say river water has proven to be far more corrosive than water from the Detroit Water and Sewerage Department, causing lead to leach into homes that have lead service lines.

Flint City Administrator Natasha Henderson said today, Oct. 7, that she believes the position of state officials has been shifting on continued use of the Flint River, a change that was made while Flint was being run by a state-appointed emergency manager.

"We're to the point that the state believes this is a public health emergency," Henderson told the City Council. "From what I see, the state is working very well with us."

The city administrator is among officials who have advocated for a return to buying water from the DWSD since a study was released last month by Hurley Medical Center's director of pediatric residency program.

The study showed the percentage of Flint infants and children with above average lead levels has nearly doubled citywide since the switch to river water, and has nearly tripled among children in "high risk" areas of lead exposure.

Governor plans 10 a.m. announcement on troubled Flint water system

FLINT (AP) — Gov. Rick Snyder plans an announcement about the water system in Flint, which is facing a public health emergency over lead in its water.

A posting on the state's website says Snyder on Thursday morning will be joined for the announcement by officials including Flint Mayor Dayne Walling, state Department of Environmental Quality Director Dan Wyant and state Department of Health and Human Services Director Nick Lyon.

The announcement comes a day after a committee of local experts in health, water and science recommended Flint reconnect to Detroit's water system while it awaits a new pipeline to Lake Huron.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. State government and nonprofit groups are distributing filters and bottled water to Flint homes and schools.

Snyder's announcement can be viewed live at 10 a.m. Thursday, Oct. 8 by visiting http://1.usa.gov/1QapVxk

Flint Officials Are No Longer Saying the Water Is Fine

By MONICA DAVEY, New York Times, OCT. 7, 2015

FLINT, Mich. — All along, through months of complaints from residents of this city about the peculiar colors and odors they said were coming from their faucets, the overriding message from the authorities here was that the water would be just fine.

Yes, there had been a boil order when fecal coliform bacteria turned up in some neighborhoods last year. And yes, the extra chlorine that was pumped in to solve that problem seemed to create another one — increased levels of a different contaminant.

Still, the guidance from Flint officials about the temporary water supply they switched to in 2014 — partly to save money — sounded assuring. In a notice sent to residents in July, city officials declared: “This is not an emergency. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours.”

The soothing talk has vanished. In recent weeks, testing has shown increased levels of lead in the blood of some Flint children — and health officials pointed to the water as a possible source.

First, the city advised residents to run their water for five minutes before using it, to use only cold water for drinking and cooking, and to install lead-removing water filters. Then county officials issued an emergency advisory recommending that people not drink Flint’s water unless it is tested for lead or filtered.

And last Friday, after corroborating that lead levels had risen in some children, state officials called for the water to be tested at all Flint public schools and for stepped-up efforts to replace lead service lines; they also promised $1 million to provide filters.

Officials met here on Wednesday afternoon, and talks were underway, officials said, for additional solutions that could come as early as Thursday. Gov. Rick Snyder said on Twitter late Wednesday that he planned to make an announcement about the situation on Thursday morning.

Private groups have raced to donate bottled water to schools, where the water fountains are now shut off, as well as filters to families who cannot afford them. Saying “we’re just in a heck of a bind,” Robert J. Pickell, the Genesee County sheriff, began serving bottled water and food that need not be cooked in water to hundreds of inmates in the county jail. Some residents have begun washing their children and pets with bottled water.

And Flint’s mayor, Dayne Walling, who had attended a 2014 event to celebrate the switch to the new water supply, called for returning to the city’s old water supply and urged state officials to provide millions of dollars to help pay for it.

The contaminated water was just the latest blow to Flint, an economically battered city that has struggled for years with factory closings, job losses and population decline.

Along Saginaw Street downtown, where at least one business had an “un-leaded” sign posted by a jug of water, residents had lingering questions: Would filters really do enough to make the water safe? What about unfiltered showers? Could they rely on the water at work and at restaurants? And why had it taken so long for leaders to figure out that there was a problem?

“I don’t think people know what’s going on at all,” said Chris Thornton, 49, who described the first blast of water from his faucets some days as looking like urine, smelling like bleach and tasting of metal. After his wife, Ronda, 50, felt sick to her stomach for months, the Thorntons began buying jugs of bottled water, though the price — on top of an already steep water bill — has been overwhelming.

“As far as my family,” Ronda Thornton said, “we’ve just given up on the city’s water.”

Flint’s water problems are tied inextricably to its fiscal woes. In 1960, nearly 200,000 people lived here. But auto plants closed, and the population has dropped by half. By 2011, Flint’s shrunken tax base and seemingly intractable budget problems prompted Mr. Snyder to appoint an emergency manager for the city. Over the next four years, the city had four managers overseeing operations. Along the way, the city switched its water supply.

For decades, the city bought water from Detroit, which treated water from Lake Huron, then piped it here, 70 miles to the northwest. But with the costs mounting, Flint’s leaders decided they could save millions by joining a new regional authority that would draw and treat its own water from Lake Huron.

There was one complication: Flint needed an alternative water supply from April 2014 until the new regional system is ready, probably next year. In the interim, Flint switched to using water from the Flint River, which state officials say had been a backup source in the past.

Ask residents about the Flint River, and many of them roll their eyes. They say it was once as a dumping ground for car parts, grocery carts and refrigerators. There have been significant improvements and intensive restoration campaigns in recent years, though a Flint River Fest set for Friday has been postponed, organizers said, given the “current drinking water crisis.”

Even now, state officials say that treated Flint River water is safe and capable of meeting state and federal standards. Officials say the problem may be that some of the aging pipes and service lines that carry water into Flint’s homes and businesses contain lead and are being corroded by water. The water Flint used to receive from Detroit was treated with chemicals intended to prevent such corrosion.

For months, questions about lead and other risks multiplied. “Everyone kept saying: ‘It’s safe! It’s safe! It’s safe!’ ” recalled Melissa Mays, a Flint resident who says she was sickened by the water and has helped organize residents over the issue.

Then in September, a researcher from Virginia Tech released findings from the water in hundreds of Flint homes showing elevated lead levels. Blood tests released by a local pediatrician — and corroborated last week by state officials analyzing their own testing — showed an increase in lead levels in children in some neighborhoods since 2014, when the city began drawing water from the river.

“We all have a concern about Flint’s drinking water in terms of what we’re seeing in terms of lead,” Mr. Snyder said last week.

Mr. Walling said that the move to river water occurred when an emergency manager controlled the city, though the City Council did vote for the city’s plans for a new, regional water system. He acknowledged supporting the move in a state of the city address, but said that he had not been given sufficient information about the safety risks.

“I had to work with what I knew at the time,” Mr. Walling, who is up for election next month, said in an interview.

But for many residents, the authorities failed the city by taking so long to react. “Anytime you have to weigh money against the health and welfare of people, it always has to be the health and welfare you go with,” said the Rev. Alfred Harris, a local pastor who has stopped conducting baptisms at his church because of concerns about the water. “We’ve been talking about this for the last 14 months, and they did not give a sincere ear to any of us. Shame on you!”

LeeAnne Walters said her son, Gavin, 4, who has immune system issues, had suffered direct consequences. After the switch to river water, which sometimes looked brown in their house, Gavin dropped to 27 pounds, far below the weight of his twin brother, she said. He sometimes seemed unable to pronounce words he knew, she said, and then test results showed an elevated lead level in his blood.

“He is going to deal with the side effects of this for the rest of his life,” Ms. Walters said. “I don’t think there’s a word angry enough to describe my anger. I trusted the city, and I helped the city poison my kid. Who thought this could happen in the United States?”

http://www.freep.com/story/opinion/columnists/nancy-kaffer/2015/10/07/flint-water-crisis/73534078/

Waiting for answers, action in Flint water crisis

By Nancy Kaffer, Detroit Free Press Columnist 10:27 p.m. EDT October 7, 2015

They are still waiting for answers about the water in Flint.

And it's hard to say when, or if, those answers are coming.

It has been two weeks since a hospital researcher found that more Flint kids had been lead poisoned since the city switched its municipal water supply. And it has been nearly a week since the State of Michigan abruptly changed its posture, acknowledging, after months of denial and empty assurances, that Flint's water supply was compromised.

Since then, a lot of folks have worked diligently to sort out how things went so badly wrong in this small, impoverished city, and what the State of Michigan is doing to fix it.

But solutions remain elusive.

The state announced Friday that it has devoted $1 million to provide water filters for Flint residents, is expanding water testing and expediting improved water treatment. But two weeks on, Flint hasn't started adding chemicals to its water that would allow it to pass safely through the city's lead service pipes. That plan can likely be ready within a week, and can be enacted as soon as it's approved by the Michigan Department of Environmental Quality. Scientists say it would take roughly a month before those chemicals would begin to effect Flint's drinking water.

That would be the right play, unless the city opts to rejoin the Detroit Water and Sewerage Department -- as water experts have recommended -- a decision that would likely require financial assistance from the State of Michigan but could result in potable water flowing from Flint taps within two weeks. Is it likely to happen? Your guess is as good as mine.

And state officials continue to insist that the rules designed to monitor water systems, to ensure safe drinking water, worked as they're supposed to.

Kids in danger

The effects of lead on children are irreversible. Lead-poisoned kids can experience a host of behavioral and developmental problems, and in two Flint ZIP codes, the percentage of children affected by lead has doubled, reversing a long trend of improving rates.

That's because in 2014, Flint decided to pump untreated water from the Flint River, ending a decades-long relationship with the Detroit Water and Sewerage Department, while a new regional water authority it's joining is under construction. Since then, Flint's been treating its water locally, prompting a rash of problems related to coliform bacteria, a disinfectant and its byproduct, and now, elevated lead.

Both of these decisions were made while Flint was under state oversight, during the appointments of a series of emergency managers appointed by and answerable to Gov. Rick Snyder. The Michigan Department of Environmental Quality, whose director is appointed by the governor, must ensure that water systems are producing safe drinking water. Because Flint's water decisions were made under Snyder's emergency managers, the governor's decision-making authority is one step closer to Flint's water crisis.

The water Flint bought from Detroit was "finished," in other words, safe for humans to drink, but also treated to create a film inside those pipes that kept the lead out. That's called "corrosion control," and Detroit achieved this goal by adding phosphates to the water it pumps from Lake Huron.

Flint doesn't.

It took an unreasonably long time to get a solid answer to this question.

Corrosion control

Since April 2014, treatment at Flint's plant has included adding lime to the water it distributed to customers, largely to make the water less acidic, Liane Shekter Smith, chief of the MDEQ's office of drinking water and municipal assistance, said Tuesday.

"There was no corrosion control plan put forward at the time of the switch," Shekter Smith said. "There was a belief that (acidity) adjustment would provide adequate corrosion control, and that rounds of testing would confirm or refute that."

Any new water supply must be tested at six-month intervals to determine whether it meets the guidelines of the federal lead and copper rule, a standard established by the U.S. Environmental Protection Agency.

Tests of Flint's drinking water showed roughly 6 parts per billion (how the presence of lead in water is reckoned) in water sampled between June and December of 2014, said MDEQ spokesman Brad Wurfel. The U.S. Centers for Disease Control and Prevention said there is no acceptable level of lead exposure, but 6 ppb would, in some cases, fall below the EPA's actionable level of 15 ppb.

But because the community Flint serves is so large, it must meet a different threshold, 5 ppb. If a second round of testing showed that lead levels continued to exceed it, Flint would be required to improve its method of corrosion control.

Water sampled between January and June of 2015 showed an alarming increase: lead levels had risen to 11 ppb.

That kind of testing, Shekter Smith said, is the most reliable way to determine whether corrosion control is working.

"Having it in place is best way to know what is happening out in the system," she said.

Given the elevated blood-lead levels in Flint kids, the damage lead can cause, and the permanence of that damage, is that enough?

"I think that we are following the protocol," she said, "and the protocol got us to the right place, and we're making the right decisions."

“It did?" said Erik Olson, a senior strategy director for the Washington, D.C.-based Natural Resources Defense Council. "It didn’t sound like it."

Because the composition of water varies so greatly, there's no one right way to do corrosion control, Olson said. But Flint's plan to use lime only should have prompted questions before switching to Flint River water.

"They definitely should have said, 'OK, what's the basis of that decision? What's your engineering study that shows that that's optimizing your corrosion control?' " Olson said.

That Flint's river water would pass through pipes with lead components shouldn't have been surprising, Olson said -- the presence of lead in the water and sewage infrastructure is well-documented, and well-known.

So why didn't Flint's engineers account for that, when developing a treatment plan? That's just one of the questions I still can't answer.

Flint health experts support Detroit water reconnection

Detroit News Staff and wire reports 7:58 a.m. EDT October 8, 2015

Flint — A committee of local experts in health, water and science has recommended that Flint reconnect to Detroit's water system.

Flint administrator Natasha Henderson urged the committee to not think about cost and decide "what's in the best interest" for Flint, which has a water crisis due to elevated levels of lead in children.

The Technical Advisory Committee met Wednesday. It rarely meets, but state officials say it will have a role in Flint's water quality. The committee has no formal role in deciding whether Flint stops using the Flint River for water.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. A Virginia Tech researcher says there would be dramatic reductions in about a month if the Detroit water system is used.

Gov. Rick Snyder's administration last week said it was considering temporarily reconnecting Flint to Detroit's water system temporarily in a bid to tackle the ongoing water quality and lead issues. The state also planned to expedite construction of a new water line to Lake Huron so a planned water authority that would service Flint could operate as soon as possible. An announcement on the Flint water plan was expected Thursday.

Sara Wurfel, a spokeswoman for Snyder, said the recommendation Wednesday "is an option we're helping thoroughly review and consider with the city, and the technical advisory committee's work is much appreciated in this matter. We're also focused on working hard in collaboration with all and implementing the key action steps outlined on Oct. 2 to help protect public health and ensure safe, accessible drinking water for Flint residents."

Since 2014, the Genesee County city has drawn its drinking water from the Flint River, which has led to major problems for residents.

Last month, the city issued an advisory about its drinking water after concerns surfaced about lead contamination.

On Tuesday, Snyder's administration made free water filters available for residents.

Meanwhile, Uber drivers began collecting donations of bottled water for Flint schools. And Mayor Dayne Walling this week said he gave to Flint Community Schools some 19 palettes Kroger grocers donated.

Uber, others join in efforts to pour clean water into Flint

By Jiquanda Johnson | jjohns16@mlive.com The Flint Journal Follow on Twitter on October 08, 2015 at 5:00 AM, updated October 08, 2015 at 5:06 AM

FLINT, MI -- Businesses, charities and individuals have donated thousands of bottles of water to city of Flint residents and students since last year after controversy erupted over the quality of the city's water. Here is a list of some of the donors.

- □□□□□□□□ The United Way of Genesee County has actively participated in looking at ways to ease water woes in the city of Flint.

- □□□□□□□□ ZeroWater partnered with United Way and Flint Community Schools early October to bring water filters to the school district as a solution instead of having students drink bottled water.

- □□□□□□□□ Uber announced on Oct. 6 that drivers in Detroit will pick up donated bottles of water to bring to Flint throughout the week. People in Detroit just have to use their Uber link to notify drivers that water needs to be picked up. The initiative runs from 2 to 7 p.m. from Oct. 6 - 8.

- □□□□□□□□ There was another donation of more than 4,000 gallons of bottled water through the Flint Diaper Bank and United Way of Genesee County on Oct. 7.

- □□□□□□□□ Donations came in from Flint-area Home Depots and Sam's Club after Hurley Medical Center doctors revealed that lead levels in children in Flint had elevated after the city switched from Detroit's water source to the Flint River.

- □□□□□□□□ Mott Community College issued an Oct. 7 media release saying they are donating bottled water to Pierce Elementary School on the city's north side on Oct. 8.

- □□□□□□□□ Swan Valley High School in Saginaw is collecting bottled water to send to Flint Public Schools. The bottled water drive ends Oct. 9 and school officials are hoping to drop donations off to Flint Community Schools on Oct. 9.

•□□□□□□□□ Bendle High School sophomore Chase Harrison raised money to purchase bottled water for Flint Community Schools.

•□□□□□□□□ Lavish Living, a Flint-based organization, has donated at least 200 cases of water to Flint Community Schools. As of Oct. 6 the organization was still working to collect more water for students.

•□□□□□□□□ The Flint Northwestern football team delivered an estimated 40 cases of water on Oct. 5 to Flint area residents between Dupont, Clio, Carpenter and Pierson roads.

•□□□□□□□□ General Motors Foundation

•□□□□□□□□ In January, Sargent Title Co. collected about 600 cases of water to donated to Flint residents.

•□□□□□□□□ Absopure Water Corp. donated a semi-truck worth of bottled water to Flint residents in January.

•□□□□□□□□ 1st Congregational United Church of Christ in Kalamazoo donated 4,000 bottles of water in September.

•□□□□□□□□ Al Serra Auto Plaza announced Oct. 7 that they will serve as drop off location for bottled water donations. If donors give 12 or more bottles of water, the dealership is offering free tire rotation.

•□□□□□□□□ In March, members of the Michigan National Action Network provided an estimated 10,000 bottles of water to Flint residents.

•□□□□□□□□ District leaders also expect at least 1,000 cases of bottled water to arrive at the Food Bank on Wednesday, Oct. 7, from the Saginaw Chippewa Indian Tribe and Soaring Eagle Waterpark and Hotel and Soaring Eagle Casino and Resort.

The Flint Journal will do updates as more donor names are provided. If anyone has donor information make a note of it in the comments section of this post, or email The Flint Journal at flnews@mlive.com.

Flint water crisis a bitter indictment of dysfunctional emergency manager

By Curt Guyette, Special to The Michigan Chronicle

Stark evidence of how terribly bad things can go when democracy is dismantled can be found in the elevated levels of lead in the children of Flint.

Because of decisions made by an appointed emergency manager, the tragically high costs of trying to balance a budget by switching to an unsafe water source will be borne by kids now forced to struggle with lower IQs, behavioral problems, learning disabilities, and a host of other ill effects.

This is what can happen when people are denied full access to representative government; they get poisoned by appointees with no connection to the community. Under Michigan's emergency manager law – PA 436 — gubernatorial appointees can leave town claiming to have successfully solved a fiscal crisis when in fact what they leave in their wake is a catastrophe of monumental proportions.

In recent days, as the lead problems in Flint have made international news, former Flint emergency manager Darnell Earley – the man in charge when the switch to the Flint River was made, and who is now overseeing the education of the children in Detroit Public Schools – has tried to deny any responsibility for the catastrophe.

According to the Detroit Free Press, Earley claimed in an e-mailed statement "that he was not involved in the decision to use river water."

The governor's office and Earley can rightfully claim that the Flint mayor and City Council initially gave their blessing to the switch made 18 months ago. But that fig leaf provides little real cover for the state officials now trying to run away from their disastrous decision.

For starters, it doesn't matter what the mayor and City Council had to say when the decision was made. The emergency manager, under the sweeping powers granted under Public Act 436, had complete authority to make the switch regardless of what Flint's elected officials wanted.

Moreover, those officials were in essence working for the emergency manager, not the people who elected them. The EM decided how much pay the mayor and council members drew, and how much power they could wield.

How do things go when appointed officials try to buck the control of an EM? As we've seen in Benton Harbor and Detroit Public Schools, the answer is that they get denuded of all power and are completely marginalized.

The message to elected officials under state control has been made perfectly clear: play ball with the EM, or else.

But there is another problem with the EM law as well, one made painfully obvious in Flint. In a normally-functioning democracy, when it came time for a city of Flint to conduct tests to show it is in compliance with federal drinking water regulations, the city would be an independent actor with the Michigan Department of Environmental Quality (MDEQ) serving as a separate check on the system, another independent actor providing oversight to make sure the job is done correctly.

Instead, with Governor Rick Snyder's man being the one in charge when the decision was made to start using river water – a decision that was almost instantly revealed to be fraught with problems – the MDEQ, instead of being a watchdog protecting the citizens of Flint, served as a collaborator, working with the city to do everything in their power to skew results so that their tests would make it appear that the water was safe when it wasn't.

How do we know it wasn't safe? Because grassroots citizen groups worked with researchers at Virginia Tech and the ACLU of Michigan to conduct an independent test of nearly 300 city homes and found that the problem was far worse than the city and state claimed.

When those results were released in mid-September, the response by the state was to try and discredit them. The same was true a week later, when a Hurley Children's Hospital study found the number of children with elevated lead levels doubled after the switch to the Flint River was made.

Those two studies, and the host of problems with the state and city's water testing, last week prompted the ACLU of Michigan, the Natural Resources Defense Council, and an array of civic groups to file a petition with the U.S. EPA, calling upon the federal government to come in and provide the oversight necessary to ensure Flint's water is clean and safe.

Finally, after the state's own data confirmed those findings, and Genesee County officials took the drastic step of declaring a public health emergency, the governor and MDEQ were forced to finally admit the truth and started taking some action.

But even if those measures are enough – and they may well not be, failing as they do to require a switch back to the much cleaner and far less corrosive Detroit system – the damage already caused by this governor and his emergency managers is irreversible for the children who will struggle for the rest of their lives because of the decisions made while Flint was under state control and democracy was suspended.

Snyder supports switching Flint water system back to Detroit

Show Transcript

FLINT, Mich. -

Flint will connect with Detroit's water system amid a public health emergency over lead in its water.

The plan was announced Thursday by Gov. Rick Snyder, Flint Mayor Dayne Walling and other state officials.

"This the fastest way to protect public health," Walling said.

Quick Clicks

Flint advisory group supports reconnecting to Detroit water

Flint advisory group supports reconnecting to Detroit water

State begins distributing water filters in Flint

Flint River Fest postponed amid drinking water problems

Snyder said he will ask state lawmakers for $6 million, half of the $12 million need to reconnect with the Great Lakes Water Authority (GLWA) through next summer. The Charles Stewart Mott Foundation will provide $4 million and the city of Flint will provide $2 million.

Then, Flint would transition next summer to the new Karegnondi Water Authority pipeline.

The announcement comes a day after a committee of local experts in health, water and science recommended Flint reconnect to Detroit's water system while it awaits the new pipeline to Lake Huron.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. State government and nonprofit groups are distributing filters and bottled water to Flint homes and schools.

"The efforts to continue providing filters will continue to ensure that every home has a line of defense against the problems in the infrastructure, service lines, and older plumbing while changes continue to be made," Walling said.

Flint mayor speaks at news conference:

Read: State begins distributing water filters in Flint

Snyder said state and local authorities will continue to carry out preventative steps that include continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure. The Michigan Departments of Environmental Quality and Health and Human Services today also committed an additional $3.5 million for water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

"The Detroit Water and Sewerage Department welcomes the opportunity to work with Governor Rick Snyder and the city of Flint to provide residents with clean, safe drinking water. The Great Lakes Water Authority is committed to continue providing that service to Flint while the city implements a new drinking water system," said Sue F. McCormick, Interim CEO of the GLWA.

Snyder speaks at news conference:

School test results released; more investigation planned

The state today also released the first results from its lead screening program in schools and homes. Of 37 total samples taken at 13 buildings, four samples spread over three buildings exceeded the federal action level of 15 parts per billion.

However, this sampling provides only an initial screen, and the state is committing to further testing water and inspecting plumbing at these schools. Until testing is complete, schools are advised to continue using bottled water and filtration as a precaution to protect children.

In addition, free testing is still available for any other Flint school, including daycares and Head Starts. Free testing is also available for any Flint resident.

Additional information, including more detailed lead screening results, is available at www.michigan.gov/flintwater.

Mott Foundation hoping for ‘dramatic results’ in Flint (Detroit News)

(Photo: Todd McInturf / The Detroit News)

There was no more watching from the sidelines, C. S. Mott Foundation president Ridgway H. White said.

Not after tests revealed that some children in Flint had elevated lead levels since the switch from Detroit’s water system in April 2014.

It was time for the Mott Foundation to step in and help in a way few organizations can: in just a matter of days, it made a $4 million grant to help defray the cost to reconnect Flint with the Detroit Water and Sewerage Department, which ultimately will cost $12 million. Gov. Rick Snyder on Thursday announced the plan, which also includes $6 million from the state and $4 million from the city of Flint..

"Flint has been dealing with water issues for the past 18 months. We've looked at it and merely monitored. It's not traditional for philanthropy to get involved in government," White said Thursday afternoon.

"But after last week when the lead levels in children study was released, we felt we couldn't sit on the sidelines and watch," he said.

So White called Snyder and Flint Mayor Dayne Walling last week to offer the assistance of the foundation, a private grant-making organization with $2.7 billion in assets that in 2014 provided 400 grants totaling more than $101 million.

"We always try to innovate as a foundation," White said. "This is moving fast ... and we hope we will see dramatic results."

Established in 1926 in Flint by its namesake automotive pioneer Charles Stewart Mott, the foundation focuses most of its time and money on civic engagement, the environment, helping low- and moderate-income children and young adults access education and the Flint community.

It is also an international foundation that makes grant to South Africa, South America, Central and Eastern Europe and Russia in its civil society and environment programs.

Much of its focus is locally. Last week the foundation awarded a $100,000 grant to the United Way of Genesee County to provide free water filters to Flint residents who are concerned about lead in their drinking water.

White said he hopes the $4 million grant will return safe, clean drinking water to Flint.

"With all the testing going on we are going to have the most tested water in the country and we hope it's the most safe water at the end of the day," he said.

- Governor calls for $16M plan for Flint water crisis, switch to Detroit

All Stories

LANSING, MI — Top Michigan lawmakers appear ready and willing to send nearly $10 million to Flint in order to address a public health crisis and help the city return to Detroit water, but it's not immediately clear where the funding will come from.

"The circumstances are dire enough that we need to find the money," said Sen. Dave Robertson, R-Grand Blanc, referencing the drinking water in Flint which scientists have linked to high lead blood levels in children.

Michigan Gov. Rick Snyder on Thursday announced he will ask the Legislature to appropriate $6 million to help the city switch back to Detroit water, reversing a cost-cutting change that was made under a state-appointed emergency manager.

He'll also ask for another $3.35 million to pay for water testing at a state lab and other "agency support" services, including school inspections and follow-ups with children, according to a budget spokesman.

"All Flint residents need clean, safe drinking water," Snyder said in a statement following a morning press conference. "The technical experts helping the city on its water advisory all agree this move back to the Great Lakes Water Authority provides the best public health protection for children and families."

Harsh Flint River water has been blamed for exacerbating corrosion in aging pipes, and toxic lead levels have been detected in drinking water in three Flint schools, state officials said Thursday.

Switching back to Detroit water until the Karegnondi system comes online next summer will cost about $12 million. Snyder wants the state to pay half, the Mott Foundation has committed $4 million, leaving Flint to pay the other $2 million.

"I'm committed to taking action," House Speaker Kevin Cotter, R-Mt. Pleasant, said later Thursday. "We need to spend some more time with it to figure out exactly what that action looks like, but it's clear there's going to be a need for some money from the state, and I'm in support of that."

Senate Majority Leader Arlan Meekhof, R-West Olive said he did not know exactly where the Legislature will find the money but said "it is a public health issue, and we're going to find a way to address it.

He mentioned Healthy Michigan, the state's federally-funded expanded Medicaid program, as one potential source of financing. Cotter said lawmakers could also look to the Rainy Day Fund, but House Appropriations Chairman Al Pscholka said he did not think that would be necessary.

"This is solvable, and the state is in a good enough fiscal position to handle this," said Pscholka, R-Stevensville, indicating that he wants to act as soon as next week. "...Sometimes good government means you help people."

Senate Appropriations Chairman Dave Hildenbrand, R-Lowell, said he discussed the funding request with Snyder's budget director earlier Thursday and is open to the idea but wants "to make sure it's done right."

Senate Minority Leader Jim Ananich, D-Flint, won an amendment to a supplemental spending bill last week, inserting a placeholder that will likely serve as a vehicle for a total of $9.35 million in state aid for Flint.

Ananich, who has been calling on the state to help the city return to Detroit water, joined the governor at Thursday's press conference, saying the announcement was not "a victory" but a "fix that is unfortunately necessary."

Like the Karegnondi pipeline Flint will eventually use, Detroit water is drawn from Lake Huron, which the Snyder administration says is less prone to runoff issues that can affect shallower rivers. And the Great Lakes Water Authority has extra corrosion control protections already in place to limit lead from leaching into the water.

Still, damage was done to aging pipes in Flint, which could continue to affect drinking water. The state announced an action plan last week, with the Michigan Departments of Environmental Quality and Health and Human Services committing an initial $1 million for water filters and lead testing.

Rep. Sheldon Neely, D-Flint, said he is happy that the governor is calling for funding to help the city switch its water source, but he criticized the "anemic" response to the overall crisis.

"We have a $12 million problem, the state offered $6 million to solve it, but we already know the city of Flint and other surrounding areas are really cash strapped," he said. "At this point, no real culpability has been established for the emergency manger that made that decision."

Pscholka said he is frustrated by the situation in Flint and believes the state does bear some responsibility for the crisis, but he also noted that the Flint City Council approved early plans to move off of the Detroit water.

"Most people who are water customers don't like their water provider," Pscholka said. "They always think there's a better deal."

Asked if the state will conduct a thorough review of the water switch, Snyder said there will be continued analysis but, for the time being, he wants to "stay focused on the solutions and taking actions to solve the problems."

While lawmakers will offer various ideas on the funding source, a discussion that could go a number of ways, Robertson said he supports he governor's call for a $6 million appropriation to help the city make the switch.

"There's nothing more basic then when your tap water turns on, does water come out and is it drinkable, and does your toilet flush?" he said. "That's as basic as it gets, and I think we have an obligation to correct the situation... and then of course move as aggressively as possible to get Karegnondi done."

All Stories

FLINT, MI -- Water from Lake Huron is expected to start running through Flint's system in two weeks or less, but an expert says it will take another month for lead levels in the city to drop back to lower levels as a result.

Gov. Rick Snyder announced plans today, Oct. 8, for the state to pay most of a $12-million bill for switching the city's water source from the Flint River to Lake Huron water treated by the Detroit Water and Sewerage Department.

The Charles Stewart Mott Foundation has offered a $4-million grant toward the switch, and the city of Flint has committed $2 million more.

The switch back to the Detroit water system -- which the city abandoned in favor of treating Flint River water in April 2014 under the control of a state-appointed emergency manager -- represents a significant turnaround in the state's response to Flint's escalating water crisis.

Last week, Snyder said going back to the Detroit system was an option on the table, but was more focused on a water plan that focused on providing filters and free testing to Flint's residents.

Today's announcement followed a recommendation Wednesday by Flint's Technical Advisory Committee to change the city's drinking water source because of rising levels of lead in both water and the blood of children and infants in the city.

"We believe it will be better for the citizens of Flint ... This is the city of Flint making the decision ... We're supporting that fully," Snyder said.

Flint's move to the Detroit water system is expected to cost about $1.3 million per month until the Karegnondi Water Authority pipeline to Flint from Lake Huron is completed next summer. Flint has signed on to join the regional KWA system, and will switch to that system when it's finished.

C.S. Mott Foundation President Ridgway White said the foundation wanted to help expedite the process to bring "safe, clean water" back to Flint.

"We believe this transitional solution is the right and necessary thing to do, and we're glad we could help the state and the city make it happen," he said.

The governor plans to ask the state Legislature for a total of $10 million to address the Flint water crisis. The first $6 million is for the switch.

An additional $4 million will be requested from the state for efforts to address immediate lead issues, including further testing of children in Flint school buildings where the state this week found three buildings that tested above the federal limits for lead in the drinking water. One school tested at more than six times the limit.

Flint Mayor Dayne Walling said the city is preparing to carry out the change to lake water, and Genesee County Drain Commissioner Jeff Wright said the process must involve Detroit, Flint and the county.

"Each community has one or more valves that has to be operated," Wright said. "In Detroit's case, they have to supply the additional water, which means they have to increase water production. "In our case and Flint's, we have to flush the existing line and test for bacteria."

Detroit owns the water transmission line from its intake in Lake Huron to the area of Baxter and Potter roads in eastern Genesee County.

The county purchased a 9-mile section of pipeline from the city of Flint in June 2014 that stretches from Baxter and Potter to the area of Richfield and Genesee roads, Wright said.

From there, the city still owns a dormant section of transmission pipe that stretches through the Kearsley Creek to its treatment plant on Dort Highway.

MLive-The Flint Journal could not reach Flint Department of Public Works Director Howard Croft for comment on other preparations by the city, but Walling said work has already started to make the switch happen as soon possible.

The Rev. Alfred Harris, president of the Concerned Pastors for Social Action, said he's "happy, very happy" that the city will no longer use the Flint River as its drinking water source.

"But I wish it would have taken place months ago," Harris said.

The mayor said city officials will discuss their progress connecting to DWSD in detail Monday, Oct. 12, but said the preparation includes legal and contractual work, preparation of transmission lines for a new water source and changes in treatment at the Flint water plant.

Walling and members of Flint's Technical Advisory Committee were told Wednesday, Oct. 7, that the city's change in water source should improve lead levels after about a month.

Virginia Tech professor Marc Edwards said he expects it will take several weeks for lead levels to drop as a result of changed water.

Water test results from Flint homes show lead levels have been rising since the city began using the Flint River for water in April 2014.

The results of Flint's testing for lead since 1992, released by the state Department of Environmental Quality to The Flint Journal last month, showed 10 percent of homes sampled in the city's most recent testing contained 11 parts per billion or more of lead, with six of 69 samples exceeding the federal lead limit of 15 ppb.

Those are the highest lead levels measured in Flint by the city in more than 20 years, the state data shows.

In contrast, the city's tests of Lake Huron water from Detroit for one 10-year period -- from June 2001 until September 2011 -- resulted in just one of 155 samples registering higher than 15 ppb of lead.

Walling said he will ask the City Council and Flint's Receivership Transition Advisory Board to approve the city's $2-million contribution to switch to Detroit-supplied water.

Walling said he "could hardly sleep" once he found out the extent of the city's lead problem two weeks ago. That's when a Hurley Medical Center doctor released a study on blood lead levels in Flint's children.

The study showed the percentage of Flint infants and children with above average lead levels in their blood has nearly doubled citywide since the switch to river water, and has nearly tripled among children in "high risk" areas of lead exposure.

Flint's Lead-Contaminated Water Points To Health Effects Of Ailing Infrastructure (Forbes)

Opinions expressed by Forbes Contributors are their own.

- This flare of lead toxicity reflects how a city's unchecked, decaying infrastructure can lead to serious, avoidable illness affecting children.

In Flint Michigan, there's lead in the drinking water. This is not news to residents; they've been worrying about the smell and look of tap water since the city switched water suppliers in a money-saving effort. Pediatricians in the area have been finding high levels of lead in children's blood.

This flare of lead toxicity reflects how a city's unchecked, decaying infrastructure can lead to serious, avoidable illness affecting children. Lead poisoning is nothing to snicker at. It affects adults, too. Blood specialists are familiar with lead toxicity because it commonly causes anemia. Other manifestations include neurological disease, impaired fertility, heart and kidney problems.

The Environmental Protection Agency (EPA) has an informative page on lead's toxic effects in humans. Because lead toxicity causes irreversible neurological damage, prevention is crucial, and early detection is better than late detection.

Early effects of lead poisoning can be subtle. Tiredness and impaired concentration are non-specific, but probably the most frequent symptoms of this metal-induced illness.

The Centers for Disease Control (CDC) considers a level of 5 micrograms per deciliter (5 µg/dl) of blood as acceptable in young children. This threshold – above which a pediatrician should report a lead poisoning case, and inform the parent – was lowered in 2012, for good reason.

According to the CDC's website, today: "No safe blood lead level in children has been identified. Even low levels of lead in blood have been shown to affect IQ, ability to pay attention, and academic achievement. And effects of lead exposure cannot be corrected."

The EPA suggests an "action level" for lead in water: it should be below 15 parts per billion.

I wrote about lead toxicity a few years back, after hundreds of Nigerian children died in a mining region where some people crushed lead in their homes, and metal contaminated the soil and groundwater.

Flint to Revert to Detroit Water Supply After Lead Complaints (NYTimes)

By MONICA DAVEYOCT. 8, 2015

Photo

Officials in Flint, Mich., announced Friday that the city would no longer use the Flint River as its source of drinking water. Credit Laura McDermott for The New York Times

More than a year after residents of Flint, Mich., were switched onto a water supply that has since been linked to rising lead levels in the blood of some children, state and city officials abruptly reversed course, announcing on Thursday that Flint would return to its old water source.

"The realization of increased lead exposure and a rise in the number of children with elevated blood lead levels was devastating for our community," Dayne Walling, the mayor of Flint, said at a news conference where he and Gov. Rick Snyder announced plans to spend $12 million to restore the city's connection to Detroit's water system, which comes from Lake Huron. "I could hardly sleep knowing that our youngest and most vulnerable children could be at greater risk if precautionary steps were not taken," said Mr. Walling, who is seeking re-election next month.

Continue reading the main story

Residents of Flint and others lauded the decision. Some had been pressing for it for many months as complaints emerged about strange smells and colors coming from faucets, as well as unexplained rashes, ailments and worries about lead.

Photo

LeeAnne Walters, a resident who says her 4-year-old son has been found to have high lead levels in his blood, holds a water filter that shows signs of lead particles from her home in Flint. Credit Laura McDermott for The New York Times

“I’m happy that the city is finally doing what they should have done a long time ago,” said LeeAnne Walters, a resident who says her 4-year-old son was found to have high lead levels in his blood. “They should have taken it seriously back months ago when we tried to tell them, but they chose to ignore it. If they had been doing their jobs from the start, it wouldn’t have taken all this.”

Flint, an economically-troubled city 70 miles from Detroit, switched its water supply to the Flint River last year, after leaving Detroit’s costly water system. As part of efforts to cut costs that had overwhelmed the shrinking city, Flint officials planned to join a new, regional water system, which would also draw water from Lake Huron. But the new system will not be ready until mid-2016, and so the city turned in the interim to the Flint River in April 2014, leaving many residents skeptical.

In addition to the strange appearance of the water in some homes, which some residents began collecting in bottles as evidence, there were other problems. When fecal coliform bacteria turned up in the water, residents were told to boil their water. The extra chlorine that was used to solve that problem caused a new one: elevated levels of another contaminant, total trihalomethanes, which health officials say can lead to liver or kidney problems. At the time, the authorities assured residents that they were handling the issues, and that the water remained within safety guidelines.

But then came worries about lead. In early September, a researcher from Virginia Tech reported that tests of the water in nearly 300 Flint homes showed elevated lead levels in the city. A pediatrician announced that blood tests showed increased lead levels in some children since 2014, and last week state officials corroborated those findings.

In recent days, the city, county and state issued advisories — guidance to residents such as installing lead-removing filters; running water for five minutes before using it; and only using cold water for drinking, cooking and making baby formula. But by Thursday morning, there was a more significant announcement, and it was the one some residents like Ms. Walters had long sought: In about two weeks, the city will stop drawing water from the Flint River and return to Detroit's system until the new regional system is ready.

"We all care about the citizens of Flint, all the citizens in the state, in making sure we can have safe clean water for people," said Mr. Snyder, who said that he will seek $6 million from the State Legislature to help pay for Flint's temporary return to Detroit water. The city is expected to pay $2 million, and the other $4 million will come from the Charles Stewart Mott Foundation.

Health experts suspect that the water from the Flint River is particularly corrosive and may be leaching lead from some of the city's oldest pipes and service lines. They said water from Detroit's facility is treated with substances that help coat the inside of pipes, which tends to prevent such corrosion.

Yet even as officials announced their plans on Thursday, new test results were announced. Sampling of water in Flint's schools over the past week found that three schools had lead levels higher than a federal standard, state officials said. Flint schools, where water fountains have been turned off in recent days, are providing students with donated bottled water.

Flint water crisis: An obscene failure of government (Detroit Free Press)

By The Detroit Free Press Editorial Board 3:47 p.m. EDT October 8, 2015

Empty boxes of water filters lay in piles as Flint residents get free water filters at the Genesee County Community Action Resource Department on Lippincott in Flint on Tuesday October 6, 2015 that state of Michigan is providing to residents with partnership from the Michigan Department of Health Human Services and the Genesee County Community Action Resource Department as part of Governor Snyder's water action plan for the city since high levels of lead have been found in the drinking water that comes from the Flint River. Ryan Garza, Detroit Free Press

(Photo: Ryan Garza, Detroit Free Press)

There's good news: The City of Flint could soon reconnect to the Detroit Water and Sewer Department, a water source that doesn't leach lead from aging pipes into the municipal water supply.

And there's bad news: Three Flint elementary schools have water with lead levels more than 15 parts per billion, in excess of U.S. Environmental Protection Agency guidelines. At one school, Freeman Elementary, water tests found lead levels of 101 ppb. Add this to months of data showing elevated lead levels in homes across Flint, and a higher percentage of children with elevated blood-lead levels.

Lead poisoning causes behavioral and developmental problems in children. It is irreversible. Pregnant women and children are most vulnerable. The U.S. Centers for Disease Control and Prevention say there is no acceptable level of lead exposure.

And in at least three Flint schools, children have been drinking lead-contaminated water for up to

16 months.

DETROIT FREE PRESS

Snyder seeks $6 million to help fix Flint water

Sixteen months, as Flint residents told the state again and again that their water wasn't right. Sixteen months, as independent researchers meticulously documented rising lead levels in water and in the blood of Flint children. Sixteen months, as the state worked to disparage and discredit the work of respected scientists, even as its own data supported those findings.

At a press conference Thursday, Gov. Rick Snyder appeared chastened.

He should.

Snyder appoints the head of the Michigan Department of Environmental Quality, the agency charged with ensuring that drinking water throughout our state is safe.

In Flint, it failed.

Flint's decisions first to join a new regional water authority, and then to pump water from the Flint River — ending a decades-long relationship with Detroit's system — were made while Flint was under state oversight, during the tenure of a Snyder-appointed emergency manager charged with balancing Flint's budget. That system is justified by the governor's constitutional responsibility to attend to the health and wellness of all Michiganders.

In Flint, he failed.

This newspaper twice endorsed Snyder for governor, albeit with grave reservations. But because of the relative weakness of his opponents, the leadership he displayed in resolving Detroit's protracted financial crisis and our hope that he would use his business acumen to ensure that government better served people, he narrowly won our endorsement.

Last year, in a detailed analysis of Snyder's record, this editorial board expressed our dissatisfaction about Snyder's first term: "The governor balanced the budget at the expense of cities and school districts. His disdain for politics is inappropriate in the state's chief politician; his deficiencies as a deal-maker have sometimes resulted in terrible consequences for Michiganders."

This, we wrote, was Snyder's most profound flaw: "He has got to see people, not sums, as the bottom line of the state balance sheet."

We wrote that he rarely exhibited strong, decisive leadership, that he must "grow into a more sure-footed, principled leader." That we were fearful of what Snyder's second term could hold.

Snyder defended the state's decisions on Thursday, saying it had followed EPA and MDEQ testing protocols. The state did the minimum required, his responses implied. Why should it have to do more?

This is what Snyder does not understand. To lead a state, accountancy is not sufficient. To lead a state, a balanced budget is not sufficient. To lead a state, doing only what is required is not sufficient.

The modern vogue for paring services and cutting budgets is an insidious misunderstanding of the foundations of government. Fiscal conservationism is correct to suggest that government should recognize the value of a dollar. But it is absolutely incorrect when it considers the value of a dollar more significant than other values. A dollar saved at the expense of public safety. A dollar saved at the expense of Flint's children. A dollar saved at the expense of the public trust. These are equations that can never balance.

At this math, Snyder has consistently failed.

DETROIT FREE PRESS

Flint water decision inexcusable

When Flint began to pump river water, it opted not to add a chemical that would have created a film inside its aging service pipes, preventing lead from entering the water. MDEQ signed off on that plan. Snyder's representatives have said both decisions were in progress before Flint's emergency managers were appointed, belying the reality of an emergency manager's broad authority in the city he or she is charged to lead.

That Flint has aging service lines with lead materials shouldn't have been a surprise. That Flint would need to treat the water it pumped to ensure it could flow safely through those lines shouldn't have been at issue.

Here is all we can surmise: Pumping Flint River water saved money. And that, as they say, was that.

Snyder says that his team will issue an "after action report," with recommendations about how things could have been done differently. This is a necessary step and should be conducted by a team with sufficient independence from Snyder's office — and the MDEQ — to reach impartial conclusions.

Snyder has asked the Michigan Legislature to contribute $6 million of the $12 million it will cost Flint to purchase its water from Detroit. The Charles Stewart Mott Foundation and the city itself will cover the remaining costs. The transition could be complete within two weeks. We applaud the Mott Foundation for its contribution and urge the Legislature to approve its portion of the funds required without delay.

Snyder and other officials have said Flint will continue to work to replace lead service lines. This is necessary work. The state has devoted $1 million to pay for water filters for Flint residents, another helpful measure.

People. Not sums.

Thus endeth the lesson. It is one our government should not forget. It is one Flint's children can't forget.

Correction: *An earlier version of this editorial incorrectly stated the number of schools that have water with high lead levels.*

LANSING, Mich. (NEWSCHANNEL 3) - Tuesday morning Michigan Governor Rick Snyder called for the city of Flint to again get its water from Detroit's system.

The announcement comes as the state scrambles to address a public health emergency over lead in the Flint water supply.

The governor is asking state lawmakers for six million dollars to help the city reconnect to a safe water supply.

Right now Flint's water is leaching lead from old pipes as it flow into homes.

The water is coming from the Flint River, which is treated but still has corrosive features.

Snyder supports switching Flint water system back to Detroit

Show Transcript

FLINT, Mich. -

Flint will connect with Detroit's water system amid a public health emergency over lead in its water.

The plan was announced Thursday by Gov. Rick Snyder, Flint Mayor Dayne Walling and other state officials.

"This the fastest way to protect public health," Walling said.

Quick Clicks

Flint advisory group supports reconnecting to Detroit water

Flint advisory group supports reconnecting to Detroit water

State begins distributing water filters in Flint

Flint River Fest postponed amid drinking water problems

Snyder said he will ask state lawmakers for $6 million, half of the $12 million need to reconnect with the Great Lakes Water Authority (GLWA) through next summer. The Charles Stewart Mott Foundation will provide $4 million and the city of Flint will provide $2 million.

Then, Flint would transition next summer to the new Karegnondi Water Authority pipeline.

The announcement comes a day after a committee of local experts in health, water and science recommended Flint reconnect to Detroit's water system while it awaits the new pipeline to Lake Huron.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. State government and nonprofit groups are distributing filters and bottled water to Flint homes and schools.

"The efforts to continue providing filters will continue to ensure that every home has a line of defense against the problems in the infrastructure, service lines, and older plumbing while changes continue to be made," Walling said.

Flint mayor speaks at news conference:

Read: State begins distributing water filters in Flint

Snyder said state and local authorities will continue to carry out preventative steps that include continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure. The Michigan Departments of Environmental Quality and Health and Human Services today also committed an additional $3.5 million for water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

"The Detroit Water and Sewerage Department welcomes the opportunity to work with Governor Rick Snyder and the city of Flint to provide residents with clean, safe drinking water. The Great Lakes Water Authority is committed to continue providing that service to Flint while the city implements a new drinking water system," said Sue F. McCormick, Interim CEO of the GLWA.

Snyder speaks at news conference:

School test results released; more investigation planned

The state today also released the first results from its lead screening program in schools and homes. Of 37 total samples taken at 13 buildings, four samples spread over three buildings exceeded the federal action level of 15 parts per billion.

However, this sampling provides only an initial screen, and the state is committing to further testing water and inspecting plumbing at these schools. Until testing is complete, schools are advised to continue using bottled water and filtration as a precaution to protect children.

In addition, free testing is still available for any other Flint school, including daycares and Head Starts. Free testing is also available for any Flint resident.

Additional information, including more detailed lead screening results, is available at www.michigan.gov/flintwater.

There was no more watching from the sidelines, C. S. Mott Foundation president Ridgway H. White said.

Not after tests revealed that some children in Flint had elevated lead levels since the switch from Detroit's water system in April 2014.

It was time for the Mott Foundation to step in and help in a way few organizations can: in just a matter of days, it made a $4 million grant to help defray the cost to reconnect Flint with the Detroit Water and Sewerage Department, which ultimately will cost $12 million. Gov. Rick Snyder on Thursday announced the plan, which also includes $6 million from the state and $4 million from the city of Flint..

"Flint has been dealing with water issues for the past 18 months. We've looked at it and merely monitored. It's not traditional for philanthropy to get involved in government," White said Thursday afternoon.

"But after last week when the lead levels in children study was released, we felt we couldn't sit on the sidelines and watch," he said.

So White called Snyder and Flint Mayor Dayne Walling last week to offer the assistance of the foundation, a private grant-making organization with $2.7 billion in assets that in 2014 provided 400 grants totaling more than $101 million.

“We always try to innovate as a foundation,” White said. “This is moving fast ... and we hope we will see dramatic results.”

Established in 1926 in Flint by its namesake automotive pioneer Charles Stewart Mott, the foundation focuses most of its time and money on civic engagement, the environment, helping low- and moderate-income children and young adults access education and the Flint community.

It is also an international foundation that makes grant to South Africa, South America, Central and Eastern Europe and Russia in its civil society and environment programs.

Much of its focus is locally. Last week the foundation awarded a $100,000 grant to the United Way of Genesee County to provide free water filters to Flint residents who are concerned about lead in their drinking water.

White said he hopes the $4 million grant will return safe, clean drinking water to Flint.

“With all the testing going on we are going to have the most tested water in the country and we hope it’s the most safe water at the end of the day,” he said.

All Stories

LANSING, MI — Top Michigan lawmakers appear ready and willing to send nearly $10 million to Flint in order to address a public health crisis and help the city return to Detroit water, but it's not immediately clear where the funding will come from.

"The circumstances are dire enough that we need to find the money," said Sen. Dave Robertson, R-Grand Blanc, referencing the drinking water in Flint which scientists have linked to high lead blood levels in children.

Michigan Gov. Rick Snyder on Thursday announced he will ask the Legislature to appropriate $6 million to help the city switch back to Detroit water, reversing a cost-cutting change that was made under a state-appointed emergency manager.

He'll also ask for another $3.35 million to pay for water testing at a state lab and other "agency support" services, including school inspections and follow-ups with children, according to a budget spokesman.

"All Flint residents need clean, safe drinking water," Snyder said in a statement following a morning press conference. "The technical experts helping the city on its water advisory all agree this move back to the Great Lakes Water Authority provides the best public health protection for children and families."

Harsh Flint River water has been blamed for exacerbating corrosion in aging pipes, and toxic lead levels have been detected in drinking water in three Flint schools, state officials said Thursday.

Switching back to Detroit water until the Karegnondi system comes online next summer will cost about $12 million. Snyder wants the state to pay half, the Mott Foundation has committed $4 million, leaving Flint to pay the other $2 million.

"I'm committed to taking action," House Speaker Kevin Cotter, R-Mt. Pleasant, said later Thursday. "We need to spend some more time with it to figure out exactly what that action looks like, but it's clear there's going to be a need for some money from the state, and I'm in support of that."

Senate Majority Leader Arlan Meekhof, R-West Olive said he did not know exactly where the Legislature will find the money but said "it is a public health issue, and we're going to find a way to address it.

He mentioned Healthy Michigan, the state's federally-funded expanded Medicaid program, as one potential source of financing. Cotter said lawmakers could also look to the Rainy Day Fund, but House Appropriations Chairman Al Pscholka said he did not think that would be necessary.

"This is solvable, and the state is in a good enough fiscal position to handle this," said Pscholka, R-Stevensville, indicating that he wants to act as soon as next week. "...Sometimes good government means you help people."

Senate Appropriations Chairman Dave Hildenbrand, R-Lowell, said he discussed the funding request with Snyder's budget director earlier Thursday and is open to the idea but wants "to make sure it's done right."

Senate Minority Leader Jim Ananich, D-Flint, won an amendment to a supplemental spending bill last week, inserting a placeholder that will likely serve as a vehicle for a total of $9.35 million in state aid for Flint.

Ananich, who has been calling on the state to help the city return to Detroit water, joined the governor at Thursday's press conference, saying the announcement was not "a victory" but a "fix that is unfortunately necessary."

Like the Karegnondi pipeline Flint will eventually use, Detroit water is drawn from Lake Huron, which the Snyder administration says is less prone to runoff issues that can affect shallower rivers. And the Great Lakes Water Authority has extra corrosion control protections already in place to limit lead from leaching into the water.

Still, damage was done to aging pipes in Flint, which could continue to affect drinking water. The state announced an action plan last week, with the Michigan Departments of Environmental Quality and Health and Human Services committing an initial $1 million for water filters and lead testing.

Rep. Sheldon Neely, D-Flint, said he is happy that the governor is calling for funding to help the city switch its water source, but he criticized the "anemic" response to the overall crisis.

"We have a $12 million problem, the state offered $6 million to solve it, but we already know the city of Flint and other surrounding areas are really cash strapped," he said. "At this point, no real culpability has been established for the emergency manger that made that decision."

Pscholka said he is frustrated by the situation in Flint and believes the state does bear some responsibility for the crisis, but he also noted that the Flint City Council approved early plans to move off of the Detroit water.

"Most people who are water customers don't like their water provider," Pscholka said. "They always think there's a better deal."

Asked if the state will conduct a thorough review of the water switch, Snyder said there will be continued analysis but, for the time being, he wants to "stay focused on the solutions and taking actions to solve the problems."

While lawmakers will offer various ideas on the funding source, a discussion that could go a number of ways, Robertson said he supports he governor's call for a $6 million appropriation to help the city make the switch.

"There's nothing more basic then when your tap water turns on, does water come out and is it drinkable, and does your toilet flush?" he said. "That's as basic as it gets, and I think we have an obligation to correct the situation... and then of course move as aggressively as possible to get Karegnondi done."

All Stories

FLINT, MI -- Water from Lake Huron is expected to start running through Flint's system in two weeks or less, but an expert says it will take another month for lead levels in the city to drop back to lower levels as a result.

Gov. Rick Snyder announced plans today, Oct. 8, for the state to pay most of a $12-million bill for switching the city's water source from the Flint River to Lake Huron water treated by the Detroit Water and Sewerage Department.

The Charles Stewart Mott Foundation has offered a $4-million grant toward the switch, and the city of Flint has committed $2 million more.

The switch back to the Detroit water system -- which the city abandoned in favor of treating Flint River water in April 2014 under the control of a state-appointed emergency manager -- represents a significant turnaround in the state's response to Flint's escalating water crisis.

Last week, Snyder said going back to the Detroit system was an option on the table, but was more focused on a water plan that focused on providing filters and free testing to Flint's residents.

Today's announcement followed a recommendation Wednesday by Flint's Technical Advisory Committee to change the city's drinking water source because of rising levels of lead in both water and the blood of children and infants in the city.

"We believe it will be better for the citizens of Flint ... This is the city of Flint making the decision ... We're supporting that fully," Snyder said.

Flint's move to the Detroit water system is expected to cost about $1.3 million per month until the Karegnondi Water Authority pipeline to Flint from Lake Huron is completed next summer. Flint has signed on to join the regional KWA system, and will switch to that system when it's finished.

C.S. Mott Foundation President Ridgway White said the foundation wanted to help expedite the process to bring "safe, clean water" back to Flint.

"We believe this transitional solution is the right and necessary thing to do, and we're glad we could help the state and the city make it happen," he said.

The governor plans to ask the state Legislature for a total of $10 million to address the Flint water crisis. The first $6 million is for the switch.

An additional $4 million will be requested from the state for efforts to address immediate lead issues, including further testing of children in Flint school buildings where the state this week found three buildings that tested above the federal limits for lead in the drinking water. One school tested at more than six times the limit.

Flint Mayor Dayne Walling said the city is preparing to carry out the change to lake water, and Genesee County Drain Commissioner Jeff Wright said the process must involve Detroit, Flint and the county.

"Each community has one or more valves that has to be operated," Wright said. "In Detroit's case, they have to supply the additional water, which means they have to increase water production. "In our case and Flint's, we have to flush the existing line and test for bacteria."

Detroit owns the water transmission line from its intake in Lake Huron to the area of Baxter and Potter roads in eastern Genesee County.

The county purchased a 9-mile section of pipeline from the city of Flint in June 2014 that stretches from Baxter and Potter to the area of Richfield and Genesee roads, Wright said.

From there, the city still owns a dormant section of transmission pipe that stretches through the Kearsley Creek to its treatment plant on Dort Highway.

MLive-The Flint Journal could not reach Flint Department of Public Works Director Howard Croft for comment on other preparations by the city, but Walling said work has already started to make the switch happen as soon possible.

The Rev. Alfred Harris, president of the Concerned Pastors for Social Action, said he's "happy, very happy" that the city will no longer use the Flint River as its drinking water source.

"But I wish it would have taken place months ago," Harris said.

The mayor said city officials will discuss their progress connecting to DWSD in detail Monday, Oct. 12, but said the preparation includes legal and contractual work, preparation of transmission lines for a new water source and changes in treatment at the Flint water plant.

Walling and members of Flint's Technical Advisory Committee were told Wednesday, Oct. 7, that the city's change in water source should improve lead levels after about a month.

Virginia Tech professor Marc Edwards said he expects it will take several weeks for lead levels to drop as a result of changed water.

Water test results from Flint homes show lead levels have been rising since the city began using the Flint River for water in April 2014.

The results of Flint's testing for lead since 1992, released by the state Department of Environmental Quality to The Flint Journal last month, showed 10 percent of homes sampled in the city's most recent testing contained 11 parts per billion or more of lead, with six of 69 samples exceeding the federal lead limit of 15 ppb.

Those are the highest lead levels measured in Flint by the city in more than 20 years, the state data shows.

In contrast, the city's tests of Lake Huron water from Detroit for one 10-year period -- from June 2001 until September 2011 -- resulted in just one of 155 samples registering higher than 15 ppb of lead.

Walling said he will ask the City Council and Flint's Receivership Transition Advisory Board to approve the city's $2-million contribution to switch to Detroit-supplied water.

Walling said he "could hardly sleep" once he found out the extent of the city's lead problem two weeks ago. That's when a Hurley Medical Center doctor released a study on blood lead levels in Flint's children.

The study showed the percentage of Flint infants and children with above average lead levels in their blood has nearly doubled citywide since the switch to river water, and has nearly tripled among children in "high risk" areas of lead exposure.

- This flare of lead toxicity reflects how a city's unchecked, decaying infrastructure can lead to serious, avoidable illness affecting children.

In Flint Michigan, there's lead in the drinking water. This is not news to residents; they've been worrying about the smell and look of tap water since the city switched water suppliers in a money-saving effort. Pediatricians in the area have been finding high levels of lead in children's blood.

This flare of lead toxicity reflects how a city's unchecked, decaying infrastructure can lead to serious, avoidable illness affecting children. Lead poisoning is nothing to snicker at. It affects adults, too. Blood specialists are familiar with lead toxicity because it commonly causes anemia. Other manifestations include neurological disease, impaired fertility, heart and kidney problems.

The Environmental Protection Agency (EPA) has an informative page on lead's toxic effects in humans. Because lead toxicity causes irreversible neurological damage, prevention is crucial, and early detection is better than late detection.

Early effects of lead poisoning can be subtle. Tiredness and impaired concentration are non-specific, but probably the most frequent symptoms of this metal-induced illness.

The Centers for Disease Control (CDC) considers a level of 5 micrograms per deciliter (5 μg/dl) of blood as acceptable in young children. This threshold – above which a pediatrician should report a lead poisoning case, and inform the parent – was lowered in 2012, for good reason.

According to the CDC's website, today: "No safe blood lead level in children has been identified. Even low levels of lead in blood have been shown to affect IQ, ability to pay attention, and academic achievement. And effects of lead exposure cannot be corrected."

The EPA suggests an "action level" for lead in water: it should be below 15 parts per billion.

I wrote about lead toxicity a few years back, after hundreds of Nigerian children died in a mining region where some people crushed lead in their homes, and metal contaminated the soil and groundwater.

Flint to Revert to Detroit Water Supply After Lead Complaints (NYTimes)

By MONICA DAVEYOCT. 8, 2015

Photo

Officials in Flint, Mich., announced Friday that the city would no longer use the Flint River as its source of drinking water. Credit Laura McDermott for The New York Times

More than a year after residents of Flint, Mich., were switched onto a water supply that has since been linked to rising lead levels in the blood of some children, state and city officials abruptly reversed course, announcing on Thursday that Flint would return to its old water source.

"The realization of increased lead exposure and a rise in the number of children with elevated blood lead levels was devastating for our community," Dayne Walling, the mayor of Flint, said at a news conference where he and Gov. Rick Snyder announced plans to spend $12 million to restore the city's connection to Detroit's water system, which comes from Lake Huron. "I could hardly sleep knowing that our youngest and most vulnerable children could be at greater risk if precautionary steps were not taken," said Mr. Walling, who is seeking re-election next month.

Continue reading the main story

Residents of Flint and others lauded the decision. Some had been pressing for it for many months as complaints emerged about strange smells and colors coming from faucets, as well as unexplained rashes, ailments and worries about lead.

“I’m happy that the city is finally doing what they should have done a long time ago,” said LeeAnne Walters, a resident who says her 4-year-old son was found to have high lead levels in his blood. “They should have taken it seriously back months ago when we tried to tell them, but they chose to ignore it. If they had been doing their jobs from the start, it wouldn’t have taken all this.”

Flint, an economically-troubled city 70 miles from Detroit, switched its water supply to the Flint River last year, after leaving Detroit’s costly water system. As part of efforts to cut costs that had overwhelmed the shrinking city, Flint officials planned to join a new, regional water system, which would also draw water from Lake Huron. But the new system will not be ready until mid-2016, and so the city turned in the interim to the Flint River in April 2014, leaving many residents skeptical.

In addition to the strange appearance of the water in some homes, which some residents began collecting in bottles as evidence, there were other problems. When fecal coliform bacteria turned up in the water, residents were told to boil their water. The extra chlorine that was used to solve that problem caused a new one: elevated levels of another contaminant, total trihalomethanes, which health officials say can lead to liver or kidney problems. At the time, the authorities assured residents that they were handling the issues, and that the water remained within safety guidelines.

But then came worries about lead. In early September, a researcher from Virginia Tech reported that tests of the water in nearly 300 Flint homes showed elevated lead levels in the city. A pediatrician announced that blood tests showed increased lead levels in some children since 2014, and last week state officials corroborated those findings.

In recent days, the city, county and state issued advisories — guidance to residents such as installing lead-removing filters; running water for five minutes before using it; and only using cold water for drinking, cooking and making baby formula. But by Thursday morning, there was a more significant announcement, and it was the one some residents like Ms. Walters had long sought: In about two weeks, the city will stop drawing water from the Flint River and return to Detroit's system until the new regional system is ready.

"We all care about the citizens of Flint, all the citizens in the state, in making sure we can have safe clean water for people," said Mr. Snyder, who said that he will seek $6 million from the State Legislature to help pay for Flint's temporary return to Detroit water. The city is expected to pay $2 million, and the other $4 million will come from the Charles Stewart Mott Foundation.

Health experts suspect that the water from the Flint River is particularly corrosive and may be leaching lead from some of the city's oldest pipes and service lines. They said water from Detroit's facility is treated with substances that help coat the inside of pipes, which tends to prevent such corrosion.

Yet even as officials announced their plans on Thursday, new test results were announced. Sampling of water in Flint's schools over the past week found that three schools had lead levels higher than a federal standard, state officials said. Flint schools, where water fountains have been turned off in recent days, are providing students with donated bottled water.

Flint water crisis: An obscene failure of government (Detroit Free Press)

By The Detroit Free Press Editorial Board 3:47 p.m. EDT October 8, 2015

Empty boxes of water filters lay in piles as Flint residents get free water filters at the Genesee County Community Action Resource Department on Lippincott in Flint on Tuesday October 6, 2015 that state of Michigan is providing to residents with partnership from the Michigan Department of Health Human Services and the Genesee County Community Action Resource Department as part of Governor Snyder's water action plan for the city since high levels of lead have been found in the drinking water that comes from the Flint River. There's good news: The City of Flint could soon reconnect to the Detroit Water and Sewer Department, a water source that doesn't leach lead from aging pipes into the municipal water supply.

And there's bad news: Three Flint elementary schools have water with lead levels more than 15 parts per billion, in excess of U.S. Environmental Protection Agency guidelines. At one school, Freeman Elementary, water tests found lead levels of 101 ppb. Add this to months of data showing elevated lead levels in homes across Flint, and a higher percentage of children with elevated blood-lead levels.

Lead poisoning causes behavioral and developmental problems in children. It is irreversible. Pregnant women and children are most vulnerable. The U.S. Centers for Disease Control and Prevention say there is no acceptable level of lead exposure.

And in at least three Flint schools, children have been drinking lead-contaminated water for up to

16 months.

DETROIT FREE PRESS

Snyder seeks $6 million to help fix Flint water

Sixteen months, as Flint residents told the state again and again that their water wasn't right. Sixteen months, as independent researchers meticulously documented rising lead levels in water and in the blood of Flint children. Sixteen months, as the state worked to disparage and discredit the work of respected scientists, even as its own data supported those findings.

At a press conference Thursday, Gov. Rick Snyder appeared chastened.

He should.

Snyder appoints the head of the Michigan Department of Environmental Quality, the agency charged with ensuring that drinking water throughout our state is safe.

In Flint, it failed.

Flint's decisions first to join a new regional water authority, and then to pump water from the Flint River — ending a decades-long relationship with Detroit's system — were made while Flint was under state oversight, during the tenure of a Snyder-appointed emergency manager charged with balancing Flint's budget. That system is justified by the governor's constitutional responsibility to attend to the health and wellness of all Michiganders.

In Flint, he failed.

This newspaper twice endorsed Snyder for governor, albeit with grave reservations. But because of the relative weakness of his opponents, the leadership he displayed in resolving Detroit's protracted financial crisis and our hope that he would use his business acumen to ensure that government better served people, he narrowly won our endorsement.

Last year, in a detailed analysis of Snyder's record, this editorial board expressed our dissatisfaction about Snyder's first term: "The governor balanced the budget at the expense of cities and school districts. His disdain for politics is inappropriate in the state's chief politician; his deficiencies as a deal-maker have sometimes resulted in terrible consequences for Michiganders."

This, we wrote, was Snyder's most profound flaw: "He has got to see people, not sums, as the bottom line of the state balance sheet."

We wrote that he rarely exhibited strong, decisive leadership, that he must "grow into a more sure-footed, principled leader." That we were fearful of what Snyder's second term could hold.

Snyder defended the state's decisions on Thursday, saying it had followed EPA and MDEQ testing protocols. The state did the minimum required, his responses implied. Why should it have to do more?

This is what Snyder does not understand. To lead a state, accountancy is not sufficient. To lead a state, a balanced budget is not sufficient. To lead a state, doing only what is required is not sufficient.

The modern vogue for paring services and cutting budgets is an insidious misunderstanding of the foundations of government. Fiscal conservationism is correct to suggest that government should recognize the value of a dollar. But it is absolutely incorrect when it considers the value of a dollar more significant than other values. A dollar saved at the expense of public safety. A dollar saved at the expense of Flint's children. A dollar saved at the expense of the public trust. These are equations that can never balance.

At this math, Snyder has consistently failed.

DETROIT FREE PRESS

Flint water decision inexcusable

When Flint began to pump river water, it opted not to add a chemical that would have created a film inside its aging service pipes, preventing lead from entering the water. MDEQ signed off on that plan. Snyder's representatives have said both decisions were in progress before Flint's emergency managers were appointed, belying the reality of an emergency manager's broad authority in the city he or she is charged to lead.

That Flint has aging service lines with lead materials shouldn't have been a surprise. That Flint would need to treat the water it pumped to ensure it could flow safely through those lines shouldn't have been at issue.

Here is all we can surmise: Pumping Flint River water saved money. And that, as they say, was that.

Snyder says that his team will issue an "after action report," with recommendations about how things could have been done differently. This is a necessary step and should be conducted by a team with sufficient independence from Snyder's office — and the MDEQ — to reach impartial conclusions.

Snyder has asked the Michigan Legislature to contribute $6 million of the $12 million it will cost Flint to purchase its water from Detroit. The Charles Stewart Mott Foundation and the city itself will cover the remaining costs. The transition could be complete within two weeks. We applaud the Mott Foundation for its contribution and urge the Legislature to approve its portion of the funds required without delay.

Snyder and other officials have said Flint will continue to work to replace lead service lines. This is necessary work. The state has devoted $1 million to pay for water filters for Flint residents, another helpful measure.

People. Not sums.

Thus endeth the lesson. It is one our government should not forget. It is one Flint's children can't forget.

***Correction**: An earlier version of this editorial incorrectly stated the number of schools that have water with high lead levels.*

LANSING, Mich. (NEWSCHANNEL 3) - Tuesday morning Michigan Governor Rick Snyder called for the city of Flint to again get its water from Detroit's system.

The announcement comes as the state scrambles to address a public health emergency over lead in the Flint water supply.

The governor is asking state lawmakers for six million dollars to help the city reconnect to a safe water supply.

Right now Flint's water is leaching lead from old pipes as it flow into homes.

The water is coming from the Flint River, which is treated but still has corrosive features.

Snyder supports switching Flint water system back to Detroit

Show Transcript

FLINT, Mich. -

Flint will connect with Detroit's water system amid a public health emergency over lead in its water.

The plan was announced Thursday by Gov. Rick Snyder, Flint Mayor Dayne Walling and other state officials.

"This the fastest way to protect public health," Walling said.

Quick Clicks

Flint advisory group supports reconnecting to Detroit water

Flint advisory group supports reconnecting to Detroit water

State begins distributing water filters in Flint

Flint River Fest postponed amid drinking water problems

Snyder said he will ask state lawmakers for $6 million, half of the $12 million need to reconnect with the Great Lakes Water Authority (GLWA) through next summer. The Charles Stewart Mott Foundation will provide $4 million and the city of Flint will provide $2 million.

Then, Flint would transition next summer to the new Karegnondi Water Authority pipeline.

The announcement comes a day after a committee of local experts in health, water and science recommended Flint reconnect to Detroit's water system while it awaits the new pipeline to Lake Huron.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. State government and nonprofit groups are distributing filters and bottled water to Flint homes and schools.

"The efforts to continue providing filters will continue to ensure that every home has a line of defense against the problems in the infrastructure, service lines, and older plumbing while changes continue to be made," Walling said.

Flint mayor speaks at news conference:

Read: State begins distributing water filters in Flint

Snyder said state and local authorities will continue to carry out preventative steps that include continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure. The Michigan Departments of Environmental Quality and Health and Human Services today also committed an additional $3.5 million for water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

"The Detroit Water and Sewerage Department welcomes the opportunity to work with Governor Rick Snyder and the city of Flint to provide residents with clean, safe drinking water. The Great Lakes Water Authority is committed to continue providing that service to Flint while the city implements a new drinking water system," said Sue F. McCormick, Interim CEO of the GLWA.

Snyder speaks at news conference:

School test results released; more investigation planned

The state today also released the first results from its lead screening program in schools and homes. Of 37 total samples taken at 13 buildings, four samples spread over three buildings exceeded the federal action level of 15 parts per billion.

However, this sampling provides only an initial screen, and the state is committing to further testing water and inspecting plumbing at these schools. Until testing is complete, schools are advised to continue using bottled water and filtration as a precaution to protect children.

In addition, free testing is still available for any other Flint school, including daycares and Head Starts. Free testing is also available for any Flint resident.

Additional information, including more detailed lead screening results, is available at www.michigan.gov/flintwater.

(Photo: Todd McInturf / The Detroit News)

There was no more watching from the sidelines, C. S. Mott Foundation president Ridgway H. White said.

Not after tests revealed that some children in Flint had elevated lead levels since the switch from Detroit’s water system in April 2014.

It was time for the Mott Foundation to step in and help in a way few organizations can: in just a matter of days, it made a $4 million grant to help defray the cost to reconnect Flint with the Detroit Water and Sewerage Department, which ultimately will cost $12 million. Gov. Rick Snyder on Thursday announced the plan, which also includes $6 million from the state and $4 million from the city of Flint..

“Flint has been dealing with water issues for the past 18 months. We’ve looked at it and merely monitored. It’s not traditional for philanthropy to get involved in government,” White said Thursday afternoon.

“But after last week when the lead levels in children study was released, we felt we couldn’t sit on the sidelines and watch,” he said.

So White called Snyder and Flint Mayor Dayne Walling last week to offer the assistance of the foundation, a private grant-making organization with $2.7 billion in assets that in 2014 provided 400 grants totaling more than $101 million.

“We always try to innovate as a foundation,” White said. “This is moving fast ... and we hope we will see dramatic results.”

Established in 1926 in Flint by its namesake automotive pioneer Charles Stewart Mott, the foundation focuses most of its time and money on civic engagement, the environment, helping low- and moderate-income children and young adults access education and the Flint community.

It is also an international foundation that makes grant to South Africa, South America, Central and Eastern Europe and Russia in its civil society and environment programs.

Much of its focus is locally. Last week the foundation awarded a $100,000 grant to the United Way of Genesee County to provide free water filters to Flint residents who are concerned about lead in their drinking water.

White said he hopes the $4 million grant will return safe, clean drinking water to Flint.

“With all the testing going on we are going to have the most tested water in the country and we hope it’s the most safe water at the end of the day,” he said.

- Governor calls for $16M plan for Flint water crisis, switch to Detroit

All Stories

LANSING, MI — Top Michigan lawmakers appear ready and willing to send nearly $10 million to Flint in order to address a public health crisis and help the city return to Detroit water, but it's not immediately clear where the funding will come from.

"The circumstances are dire enough that we need to find the money," said Sen. Dave Robertson, R-Grand Blanc, referencing the drinking water in Flint which scientists have linked to high lead blood levels in children.

Michigan Gov. Rick Snyder on Thursday announced he will ask the Legislature to appropriate $6 million to help the city switch back to Detroit water, reversing a cost-cutting change that was made under a state-appointed emergency manager.

He'll also ask for another $3.35 million to pay for water testing at a state lab and other "agency support" services, including school inspections and follow-ups with children, according to a budget spokesman.

"All Flint residents need clean, safe drinking water," Snyder said in a statement following a morning press conference. "The technical experts helping the city on its water advisory all agree this move back to the Great Lakes Water Authority provides the best public health protection for children and families."

Harsh Flint River water has been blamed for exacerbating corrosion in aging pipes, and toxic lead levels have been detected in drinking water in three Flint schools, state officials said Thursday.

Switching back to Detroit water until the Karegnondi system comes online next summer will cost about $12 million. Snyder wants the state to pay half, the Mott Foundation has committed $4 million, leaving Flint to pay the other $2 million.

"I'm committed to taking action," House Speaker Kevin Cotter, R-Mt. Pleasant, said later Thursday. "We need to spend some more time with it to figure out exactly what that action looks like, but it's clear there's going to be a need for some money from the state, and I'm in support of that."

Senate Majority Leader Arlan Meekhof, R-West Olive said he did not know exactly where the Legislature will find the money but said "it is a public health issue, and we're going to find a way to address it.

He mentioned Healthy Michigan, the state's federally-funded expanded Medicaid program, as one potential source of financing. Cotter said lawmakers could also look to the Rainy Day Fund, but House Appropriations Chairman Al Pscholka said he did not think that would be necessary.

"This is solvable, and the state is in a good enough fiscal position to handle this," said Pscholka, R-Stevensville, indicating that he wants to act as soon as next week. "...Sometimes good government means you help people."

Senate Appropriations Chairman Dave Hildenbrand, R-Lowell, said he discussed the funding request with Snyder's budget director earlier Thursday and is open to the idea but wants "to make sure it's done right."

Senate Minority Leader Jim Ananich, D-Flint, won an amendment to a supplemental spending bill last week, inserting a placeholder that will likely serve as a vehicle for a total of $9.35 million in state aid for Flint.

Ananich, who has been calling on the state to help the city return to Detroit water, joined the governor at Thursday's press conference, saying the announcement was not "a victory" but a "fix that is unfortunately necessary."

Like the Karegnondi pipeline Flint will eventually use, Detroit water is drawn from Lake Huron, which the Snyder administration says is less prone to runoff issues that can affect shallower rivers. And the Great Lakes Water Authority has extra corrosion control protections already in place to limit lead from leaching into the water.

Still, damage was done to aging pipes in Flint, which could continue to affect drinking water. The state announced an action plan last week, with the Michigan Departments of Environmental Quality and Health and Human Services committing an initial $1 million for water filters and lead testing.

Rep. Sheldon Neely, D-Flint, said he is happy that the governor is calling for funding to help the city switch its water source, but he criticized the "anemic" response to the overall crisis.

"We have a $12 million problem, the state offered $6 million to solve it, but we already know the city of Flint and other surrounding areas are really cash strapped," he said. "At this point, no real culpability has been established for the emergency manger that made that decision."

Pscholka said he is frustrated by the situation in Flint and believes the state does bear some responsibility for the crisis, but he also noted that the Flint City Council approved early plans to move off of the Detroit water.

"Most people who are water customers don't like their water provider," Pscholka said. "They always think there's a better deal."

Asked if the state will conduct a thorough review of the water switch, Snyder said there will be continued analysis but, for the time being, he wants to "stay focused on the solutions and taking actions to solve the problems."

While lawmakers will offer various ideas on the funding source, a discussion that could go a number of ways, Robertson said he supports he governor's call for a $6 million appropriation to help the city make the switch.

"There's nothing more basic then when your tap water turns on, does water come out and is it drinkable, and does your toilet flush?" he said. "That's as basic as it gets, and I think we have an obligation to correct the situation... and then of course move as aggressively as possible to get Karegnondi done."

All Stories

FLINT, MI -- Water from Lake Huron is expected to start running through Flint's system in two weeks or less, but an expert says it will take another month for lead levels in the city to drop back to lower levels as a result.

Gov. Rick Snyder announced plans today, Oct. 8, for the state to pay most of a $12-million bill for switching the city's water source from the Flint River to Lake Huron water treated by the Detroit Water and Sewerage Department.

The Charles Stewart Mott Foundation has offered a $4-million grant toward the switch, and the city of Flint has committed $2 million more.

The switch back to the Detroit water system -- which the city abandoned in favor of treating Flint River water in April 2014 under the control of a state-appointed emergency manager -- represents a significant turnaround in the state's response to Flint's escalating water crisis.

Last week, Snyder said going back to the Detroit system was an option on the table, but was more focused on a water plan that focused on providing filters and free testing to Flint's residents.

Today's announcement followed a recommendation Wednesday by Flint's Technical Advisory Committee to change the city's drinking water source because of rising levels of lead in both water and the blood of children and infants in the city.

"We believe it will be better for the citizens of Flint ... This is the city of Flint making the decision ... We're supporting that fully," Snyder said.

Flint's move to the Detroit water system is expected to cost about $1.3 million per month until the Karegnondi Water Authority pipeline to Flint from Lake Huron is completed next summer. Flint has signed on to join the regional KWA system, and will switch to that system when it's finished.

C.S. Mott Foundation President Ridgway White said the foundation wanted to help expedite the process to bring "safe, clean water" back to Flint.

"We believe this transitional solution is the right and necessary thing to do, and we're glad we could help the state and the city make it happen," he said.

The governor plans to ask the state Legislature for a total of $10 million to address the Flint water crisis. The first $6 million is for the switch.

An additional $4 million will be requested from the state for efforts to address immediate lead issues, including further testing of children in Flint school buildings where the state this week found three buildings that tested above the federal limits for lead in the drinking water. One school tested at more than six times the limit.

Flint Mayor Dayne Walling said the city is preparing to carry out the change to lake water, and Genesee County Drain Commissioner Jeff Wright said the process must involve Detroit, Flint and the county.

"Each community has one or more valves that has to be operated," Wright said. "In Detroit's case, they have to supply the additional water, which means they have to increase water production. "In our case and Flint's, we have to flush the existing line and test for bacteria."

Detroit owns the water transmission line from its intake in Lake Huron to the area of Baxter and Potter roads in eastern Genesee County.

The county purchased a 9-mile section of pipeline from the city of Flint in June 2014 that stretches from Baxter and Potter to the area of Richfield and Genesee roads, Wright said.

From there, the city still owns a dormant section of transmission pipe that stretches through the Kearsley Creek to its treatment plant on Dort Highway.

MLive-The Flint Journal could not reach Flint Department of Public Works Director Howard Croft for comment on other preparations by the city, but Walling said work has already started to make the switch happen as soon possible.

The Rev. Alfred Harris, president of the Concerned Pastors for Social Action, said he's "happy, very happy" that the city will no longer use the Flint River as its drinking water source.

"But I wish it would have taken place months ago," Harris said.

The mayor said city officials will discuss their progress connecting to DWSD in detail Monday, Oct. 12, but said the preparation includes legal and contractual work, preparation of transmission lines for a new water source and changes in treatment at the Flint water plant.

Walling and members of Flint's Technical Advisory Committee were told Wednesday, Oct. 7, that the city's change in water source should improve lead levels after about a month.

Virginia Tech professor Marc Edwards said he expects it will take several weeks for lead levels to drop as a result of changed water.

Water test results from Flint homes show lead levels have been rising since the city began using the Flint River for water in April 2014.

The results of Flint's testing for lead since 1992, released by the state Department of Environmental Quality to The Flint Journal last month, showed 10 percent of homes sampled in the city's most recent testing contained 11 parts per billion or more of lead, with six of 69 samples exceeding the federal lead limit of 15 ppb.

Those are the highest lead levels measured in Flint by the city in more than 20 years, the state data shows.

In contrast, the city's tests of Lake Huron water from Detroit for one 10-year period -- from June 2001 until September 2011 -- resulted in just one of 155 samples registering higher than 15 ppb of lead.

Walling said he will ask the City Council and Flint's Receivership Transition Advisory Board to approve the city's $2-million contribution to switch to Detroit-supplied water.

Walling said he "could hardly sleep" once he found out the extent of the city's lead problem two weeks ago. That's when a Hurley Medical Center doctor released a study on blood lead levels in Flint's children.

The study showed the percentage of Flint infants and children with above average lead levels in their blood has nearly doubled citywide since the switch to river water, and has nearly tripled among children in "high risk" areas of lead exposure.

Flint's Lead-Contaminated Water Points To Health Effects Of Ailing Infrastructure (Forbes)

Opinions expressed by Forbes Contributors are their own.

Tweet This

- This flare of lead toxicity reflects how a city's unchecked, decaying infrastructure can lead to serious, avoidable illness affecting children.

In Flint Michigan, there's lead in the drinking water. This is not news to residents; they've been worrying about the smell and look of tap water since the city switched water suppliers in a money-saving effort. Pediatricians in the area have been finding high levels of lead in children's blood.

This flare of lead toxicity reflects how a city's unchecked, decaying infrastructure can lead to serious, avoidable illness affecting children. Lead poisoning is nothing to snicker at. It affects adults, too. Blood specialists are familiar with lead toxicity because it commonly causes anemia. Other manifestations include neurological disease, impaired fertility, heart and kidney problems.

The Environmental Protection Agency (EPA) has an informative page on lead's toxic effects in humans. Because lead toxicity causes irreversible neurological damage, prevention is crucial, and early detection is better than late detection.

Early effects of lead poisoning can be subtle. Tiredness and impaired concentration are non-specific, but probably the most frequent symptoms of this metal-induced illness.

The Centers for Disease Control (CDC) considers a level of 5 micrograms per deciliter (5 μg/dl) of blood as acceptable in young children. This threshold – above which a pediatrician should report a lead poisoning case, and inform the parent – was lowered in 2012, for good reason.

According to the CDC's website, today: "No safe blood lead level in children has been identified. Even low levels of lead in blood have been shown to affect IQ, ability to pay attention, and academic achievement. And effects of lead exposure cannot be corrected."

The EPA suggests an “action level” for lead in water: it should be below 15 parts per billion.

I wrote about lead toxicity a few years back, after hundreds of Nigerian children died in a mining region where some people crushed lead in their homes, and metal contaminated the soil and groundwater.

Flint to Revert to Detroit Water Supply After Lead Complaints (NYTimes)

By MONICA DAVEYOCT. 8, 2015

Photo

<image005.jpg>

Officials in Flint, Mich., announced Friday that the city would no longer use the Flint River as its source of drinking water. Credit Laura McDermott for The New York Times

More than a year after residents of Flint, Mich., were switched onto a water supply that has since been linked to rising lead levels in the blood of some children, state and city officials abruptly reversed course, announcing on Thursday that Flint would return to its old water source.

“The realization of increased lead exposure and a rise in the number of children with elevated blood lead levels was devastating for our community,” Dayne Walling, the mayor of Flint, said at a news conference where he and Gov. Rick Snyder announced plans to spend $12 million to restore the city’s connection to Detroit’s water system, which comes from Lake Huron. “I could hardly sleep knowing that our youngest and most vulnerable children could be at greater risk if precautionary steps were not taken,” said Mr. Walling, who is seeking re-election next month.

Continue reading the main story

Residents of Flint and others lauded the decision. Some had been pressing for it for many months as complaints emerged about strange smells and colors coming from faucets, as well as unexplained rashes, ailments and worries about lead.

Photo

<image006.jpg>

LeeAnne Walters, a resident who says her 4-year-old son has been found to have high lead levels in his blood, holds a water filter that shows signs of lead particles from her home in Flint. Credit Laura McDermott for The New York Times

“I’m happy that the city is finally doing what they should have done a long time ago,” said LeeAnne Walters, a resident who says her 4-year-old son was found to have high lead levels in his blood. “They should have taken it seriously back months ago when we tried to tell them, but they chose to ignore it. If they had been doing their jobs from the start, it wouldn’t have taken all this.”

Flint, an economically-troubled city 70 miles from Detroit, switched its water supply to the Flint River last year, after leaving Detroit’s costly water system. As part of efforts to cut costs that had overwhelmed the shrinking city, Flint officials planned to join a new, regional water system, which would also draw water from Lake Huron. But the new system will not be ready until mid-2016, and so the city turned in the interim to the Flint River in April 2014, leaving many residents skeptical.

In addition to the strange appearance of the water in some homes, which some residents began collecting in bottles as evidence, there were other problems. When fecal coliform bacteria turned up in the water, residents were told to boil their water. The extra chlorine that was used to solve that problem caused a new one: elevated levels of another contaminant, total trihalomethanes, which health officials say can lead to liver or kidney problems. At the time, the authorities assured residents that they were handling the issues, and that the water remained within safety guidelines.

But then came worries about lead. In early September, a researcher from Virginia Tech reported that tests of the water in nearly 300 Flint homes showed elevated lead levels in the city. A pediatrician announced that blood tests showed increased lead levels in some children since 2014, and last week state officials corroborated those findings.

In recent days, the city, county and state issued advisories — guidance to residents such as installing lead-removing filters; running water for five minutes before using it; and only using cold water for drinking, cooking and making baby formula. But by Thursday morning, there was a more significant announcement, and it was the one some residents like Ms. Walters had long sought: In about two weeks, the city will stop drawing water from the Flint River and return to Detroit’s system until the new regional system is ready.

“We all care about the citizens of Flint, all the citizens in the state, in making sure we can have safe clean water for people,” said Mr. Snyder, who said that he will seek $6 million from the State Legislature to help pay for Flint's temporary return to Detroit water. The city is expected to pay $2 million, and the other $4 million will come from the Charles Stewart Mott Foundation.

Health experts suspect that the water from the Flint River is particularly corrosive and may be leaching lead from some of the city's oldest pipes and service lines. They said water from Detroit's facility is treated with substances that help coat the inside of pipes, which tends to prevent such corrosion.

Yet even as officials announced their plans on Thursday, new test results were announced. Sampling of water in Flint's schools over the past week found that three schools had lead levels higher than a federal standard, state officials said. Flint schools, where water fountains have been turned off in recent days, are providing students with donated bottled water.

Flint water crisis: An obscene failure of government (Detroit Free Press)

By The Detroit Free Press Editorial Board 3:47 p.m. EDT October 8, 2015

Empty boxes of water filters lay in piles as Flint residents get free water filters at the Genesee County Community Action Resource Department on Lippincott in Flint on Tuesday October 6, 2015 that state of Michigan is providing to residents with partnership from the Michigan Department of Health Human Services and the Genesee County Community Action Resource Department as part of Governor Snyder's water action plan for the city since high levels of lead have been found in the drinking water that comes from the Flint River. Ryan Garza, Detroit Free Press

<image007.jpg>Buy Photo

(Photo: Ryan Garza, Detroit Free Press)

There's good news: The City of Flint could soon reconnect to the Detroit Water and Sewer Department, a water source that doesn't leach lead from aging pipes into the municipal water supply.

And there's bad news: Three Flint elementary schools have water with lead levels more than 15 parts per billion, in excess of U.S. Environmental Protection Agency guidelines. At one school, Freeman Elementary, water tests found lead levels of 101 ppb. Add this to months of data showing elevated lead levels in homes across Flint, and a higher percentage of children with elevated blood-lead levels.

Lead poisoning causes behavioral and developmental problems in children. It is irreversible. Pregnant women and children are most vulnerable. The U.S. Centers for Disease Control and Prevention say there is no acceptable level of lead exposure.

And in at least three Flint schools, children have been drinking lead-contaminated water for up to 16 months.

DETROIT FREE PRESS

Snyder seeks $6 million to help fix Flint water

Sixteen months, as Flint residents told the state again and again that their water wasn't right. Sixteen months, as independent researchers meticulously documented rising lead levels in water and in the blood of Flint children. Sixteen months, as the state worked to disparage and discredit the work of respected scientists, even as its own data supported those findings.

At a press conference Thursday, Gov. Rick Snyder appeared chastened.

He should.

Snyder appoints the head of the Michigan Department of Environmental Quality, the agency charged with ensuring that drinking water throughout our state is safe.

In Flint, it failed.

Flint's decisions first to join a new regional water authority, and then to pump water from the Flint River — ending a decades-long relationship with Detroit's system — were made while Flint was under state oversight, during the tenure of a Snyder-appointed emergency manager charged with balancing Flint's budget. That system is justified by the governor's constitutional responsibility to attend to the health and wellness of all Michiganders.

In Flint, he failed.

This newspaper twice endorsed Snyder for governor, albeit with grave reservations. But because of the relative weakness of his opponents, the leadership he displayed in resolving Detroit’s protracted financial crisis and our hope that he would use his business acumen to ensure that government better served people, he narrowly won our endorsement.

Last year, in a detailed analysis of Snyder's record, this editorial board expressed our dissatisfaction about Snyder's first term: "The governor balanced the budget at the expense of cities and school districts. His disdain for politics is inappropriate in the state's chief politician; his deficiencies as a deal-maker have sometimes resulted in terrible consequences for Michiganders."

This, we wrote, was Snyder's most profound flaw: "He has got to see people, not sums, as the bottom line of the state balance sheet."

We wrote that he rarely exhibited strong, decisive leadership, that he must "grow into a more sure-footed, principled leader." That we were fearful of what Snyder's second term could hold.

Snyder defended the state's decisions on Thursday, saying it had followed EPA and MDEQ testing protocols. The state did the minimum required, his responses implied. Why should it have to do more?

This is what Snyder does not understand. To lead a state, accountancy is not sufficient. To lead a state, a balanced budget is not sufficient. To lead a state, doing only what is required is not sufficient.

The modern vogue for paring services and cutting budgets is an insidious misunderstanding of the foundations of government. Fiscal conservationism is correct to suggest that government should recognize the value of a dollar. But it is absolutely incorrect when it considers the value of a dollar more significant than other values. A dollar saved at the expense of public safety. A dollar saved at the expense of Flint's children. A dollar saved at the expense of the public trust. These are equations that can never balance.

At this math, Snyder has consistently failed.

DETROIT FREE PRESS

Flint water decision inexcusable

When Flint began to pump river water, it opted not to add a chemical that would have created a film inside its aging service pipes, preventing lead from entering the water. MDEQ signed off on that plan. Snyder's representatives have said both decisions were in progress before Flint's emergency managers were appointed, belying the reality of an emergency manager's broad authority in the city he or she is charged to lead.

That Flint has aging service lines with lead materials shouldn't have been a surprise. That Flint would need to treat the water it pumped to ensure it could flow safely through those lines shouldn't have been at issue.

Here is all we can surmise: Pumping Flint River water saved money. And that, as they say, was that.

Snyder says that his team will issue an "after action report," with recommendations about how things could have been done differently. This is a necessary step and should be conducted by a team with sufficient independence from Snyder's office — and the MDEQ — to reach impartial conclusions.

Snyder has asked the Michigan Legislature to contribute $6 million of the $12 million it will cost Flint to purchase its water from Detroit. The Charles Stewart Mott Foundation and the city itself will cover the remaining costs. The transition could be complete within two weeks. We applaud the Mott Foundation for its contribution and urge the Legislature to approve its portion of the funds required without delay.

Snyder and other officials have said Flint will continue to work to replace lead service lines. This is necessary work. The state has devoted $1 million to pay for water filters for Flint residents, another helpful measure.

People. Not sums.

Thus endeth the lesson. It is one our government should not forget. It is one Flint's children can't forget.

***Correction**: An earlier version of this editorial incorrectly stated the number of schools that have water with high lead levels.*

LANSING, Mich. (NEWSCHANNEL 3) - Tuesday morning Michigan Governor Rick Snyder called for the city of Flint to again get its water from Detroit's system.

The announcement comes as the state scrambles to address a public health emergency over lead in the Flint water supply.

The governor is asking state lawmakers for six million dollars to help the city reconnect to a safe water supply.

Right now Flint's water is leaching lead from old pipes as it flow into homes.

The water is coming from the Flint River, which is treated but still has corrosive features.

Snyder supports switching Flint water system back to Detroit

Show Transcript

FLINT, Mich. -

Flint will connect with Detroit's water system amid a public health emergency over lead in its water.

The plan was announced Thursday by Gov. Rick Snyder, Flint Mayor Dayne Walling and other state officials.

"This the fastest way to protect public health," Walling said.

Quick Clicks

Flint advisory group supports reconnecting to Detroit water

Flint advisory group supports reconnecting to Detroit water

State begins distributing water filters in Flint

Flint River Fest postponed amid drinking water problems

Snyder said he will ask state lawmakers for $6 million, half of the $12 million need to reconnect with the Great Lakes Water Authority (GLWA) through next summer. The Charles Stewart Mott Foundation will provide $4 million and the city of Flint will provide $2 million.

Then, Flint would transition next summer to the new Karegnondi Water Authority pipeline.

The announcement comes a day after a committee of local experts in health, water and science recommended Flint reconnect to Detroit's water system while it awaits the new pipeline to Lake

Huron.

Flint has a public health emergency due to corrosive water leaching lead from old pipes. State government and nonprofit groups are distributing filters and bottled water to Flint homes and schools.

"The efforts to continue providing filters will continue to ensure that every home has a line of defense against the problems in the infrastructure, service lines, and older plumbing while changes continue to be made," Walling said.

Flint mayor speaks at news conference:

Read: State begins distributing water filters in Flint

Snyder said state and local authorities will continue to carry out preventative steps that include continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure. The Michigan Departments of Environmental Quality and Health and Human Services today also committed an additional $3.5 million for water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

"The Detroit Water and Sewerage Department welcomes the opportunity to work with Governor Rick Snyder and the city of Flint to provide residents with clean, safe drinking water. The Great Lakes Water Authority is committed to continue providing that service to Flint while the city implements a new drinking water system," said Sue F. McCormick, Interim CEO of the GLWA.

Snyder speaks at news conference:

School test results released; more investigation planned

The state today also released the first results from its lead screening program in schools and homes. Of 37 total samples taken at 13 buildings, four samples spread over three buildings exceeded the federal action level of 15 parts per billion.

However, this sampling provides only an initial screen, and the state is committing to further testing water and inspecting plumbing at these schools. Until testing is complete, schools are advised to continue using bottled water and filtration as a precaution to protect children.

In addition, free testing is still available for any other Flint school, including daycares and Head Starts. Free testing is also available for any Flint resident.

Additional information, including more detailed lead screening results, is available at www.michigan.gov/flintwater.

Mott Foundation hoping for ‘dramatic results’ in Flint (Detroit News)

(Photo: Todd McInturf / The Detroit News)

There was no more watching from the sidelines, C. S. Mott Foundation president Ridgway H. White said.

Not after tests revealed that some children in Flint had elevated lead levels since the switch from Detroit's water system in April 2014.

It was time for the Mott Foundation to step in and help in a way few organizations can: in just a matter of days, it made a $4 million grant to help defray the cost to reconnect Flint with the Detroit Water and Sewerage Department, which ultimately will cost $12 million. Gov. Rick Snyder on Thursday announced the plan, which also includes $6 million from the state and $4 million from the city of Flint..

"Flint has been dealing with water issues for the past 18 months. We've looked at it and merely monitored. It's not traditional for philanthropy to get involved in government," White said Thursday afternoon.

"But after last week when the lead levels in children study was released, we felt we couldn't sit on the sidelines and watch," he said.

So White called Snyder and Flint Mayor Dayne Walling last week to offer the assistance of the foundation, a private grant-making organization with $2.7 billion in assets that in 2014 provided 400 grants totaling more than $101 million.

"We always try to innovate as a foundation," White said. "This is moving fast ... and we hope we will see dramatic results."

Established in 1926 in Flint by its namesake automotive pioneer Charles Stewart Mott, the foundation focuses most of its time and money on civic engagement, the environment, helping low- and moderate-income children and young adults access education and the Flint community.

It is also an international foundation that makes grant to South Africa, South America, Central and Eastern Europe and Russia in its civil society and environment programs.

Much of its focus is locally. Last week the foundation awarded a $100,000 grant to the United Way of Genesee County to provide free water filters to Flint residents who are concerned about lead in their drinking water.

White said he hopes the $4 million grant will return safe, clean drinking water to Flint.

"With all the testing going on we are going to have the most tested water in the country and we hope it's the most safe water at the end of the day," he said.

All Stories

LANSING, MI — Top Michigan lawmakers appear ready and willing to send nearly $10 million to Flint in order to address a public health crisis and help the city return to Detroit water, but it's not immediately clear where the funding will come from.

"The circumstances are dire enough that we need to find the money," said Sen. Dave Robertson, R-Grand Blanc, referencing the drinking water in Flint which scientists have linked to high lead blood levels in children.

Michigan Gov. Rick Snyder on Thursday announced he will ask the Legislature to appropriate $6 million to help the city switch back to Detroit water, reversing a cost-cutting change that was made under a state-appointed emergency manager.

He'll also ask for another $3.35 million to pay for water testing at a state lab and other "agency support" services, including school inspections and follow-ups with children, according to a budget spokesman.

"All Flint residents need clean, safe drinking water," Snyder said in a statement following a morning press conference. "The technical experts helping the city on its water advisory all agree this move back to the Great Lakes Water Authority provides the best public health protection for children and families."

Harsh Flint River water has been blamed for exacerbating corrosion in aging pipes, and toxic lead levels have been detected in drinking water in three Flint schools, state officials said Thursday.

Switching back to Detroit water until the Karegnondi system comes online next summer will cost about $12 million. Snyder wants the state to pay half, the Mott Foundation has committed $4 million, leaving Flint to pay the other $2 million.

"I'm committed to taking action," House Speaker Kevin Cotter, R-Mt. Pleasant, said later Thursday. "We need to spend some more time with it to figure out exactly what that action looks like, but it's clear there's going to be a need for some money from the state, and I'm in support of that."

Senate Majority Leader Arlan Meekhof, R-West Olive said he did not know exactly where the Legislature will find the money but said "it is a public health issue, and we're going to find a way to address it.

He mentioned Healthy Michigan, the state's federally-funded expanded Medicaid program, as one potential source of financing. Cotter said lawmakers could also look to the Rainy Day Fund, but House Appropriations Chairman Al Pscholka said he did not think that would be necessary.

"This is solvable, and the state is in a good enough fiscal position to handle this," said Pscholka, R-Stevensville, indicating that he wants to act as soon as next week. "...Sometimes good government means you help people."

Senate Appropriations Chairman Dave Hildenbrand, R-Lowell, said he discussed the funding request with Snyder's budget director earlier Thursday and is open to the idea but wants "to make sure it's done right."

Senate Minority Leader Jim Ananich, D-Flint, won an amendment to a supplemental spending bill last week, inserting a placeholder that will likely serve as a vehicle for a total of $9.35 million in state aid for Flint.

Ananich, who has been calling on the state to help the city return to Detroit water, joined the governor at Thursday's press conference, saying the announcement was not "a victory" but a "fix that is unfortunately necessary."

Like the Karegnondi pipeline Flint will eventually use, Detroit water is drawn from Lake Huron, which the Snyder administration says is less prone to runoff issues that can affect shallower rivers. And the Great Lakes Water Authority has extra corrosion control protections already in place to limit lead from leaching into the water.

Still, damage was done to aging pipes in Flint, which could continue to affect drinking water. The state announced an action plan last week, with the Michigan Departments of Environmental Quality and Health and Human Services committing an initial $1 million for water filters and lead testing.

Rep. Sheldon Neely, D-Flint, said he is happy that the governor is calling for funding to help the city switch its water source, but he criticized the "anemic" response to the overall crisis.

"We have a $12 million problem, the state offered $6 million to solve it, but we already know the city of Flint and other surrounding areas are really cash strapped," he said. "At this point, no real culpability has been established for the emergency manger that made that decision."

Pscholka said he is frustrated by the situation in Flint and believes the state does bear some responsibility for the crisis, but he also noted that the Flint City Council approved early plans to move off of the Detroit water.

"Most people who are water customers don't like their water provider," Pscholka said. "They always think there's a better deal."

Asked if the state will conduct a thorough review of the water switch, Snyder said there will be continued analysis but, for the time being, he wants to "stay focused on the solutions and taking actions to solve the problems."

While lawmakers will offer various ideas on the funding source, a discussion that could go a number of ways, Robertson said he supports he governor's call for a $6 million appropriation to help the city make the switch.

"There's nothing more basic then when your tap water turns on, does water come out and is it drinkable, and does your toilet flush?" he said. "That's as basic as it gets, and I think we have an obligation to correct the situation... and then of course move as aggressively as possible to get Karegnondi done."

All Stories

FLINT, MI -- Water from Lake Huron is expected to start running through Flint's system in two weeks or less, but an expert says it will take another month for lead levels in the city to drop back to lower levels as a result.

Gov. Rick Snyder announced plans today, Oct. 8, for the state to pay most of a $12-million bill for switching the city's water source from the Flint River to Lake Huron water treated by the Detroit Water and Sewerage Department.

The Charles Stewart Mott Foundation has offered a $4-million grant toward the switch, and the city of Flint has committed $2 million more.

The switch back to the Detroit water system -- which the city abandoned in favor of treating Flint River water in April 2014 under the control of a state-appointed emergency manager -- represents a significant turnaround in the state's response to Flint's escalating water crisis.

Last week, Snyder said going back to the Detroit system was an option on the table, but was more focused on a water plan that focused on providing filters and free testing to Flint's residents.

Today's announcement followed a recommendation Wednesday by Flint's Technical Advisory Committee to change the city's drinking water source because of rising levels of lead in both water and the blood of children and infants in the city.

"We believe it will be better for the citizens of Flint ... This is the city of Flint making the decision ... We're supporting that fully," Snyder said.

Flint's move to the Detroit water system is expected to cost about $1.3 million per month until the Karegnondi Water Authority pipeline to Flint from Lake Huron is completed next summer. Flint has signed on to join the regional KWA system, and will switch to that system when it's finished.

C.S. Mott Foundation President Ridgway White said the foundation wanted to help expedite the process to bring "safe, clean water" back to Flint.

"We believe this transitional solution is the right and necessary thing to do, and we're glad we could help the state and the city make it happen," he said.

The governor plans to ask the state Legislature for a total of $10 million to address the Flint water crisis. The first $6 million is for the switch.

An additional $4 million will be requested from the state for efforts to address immediate lead issues, including further testing of children in Flint school buildings where the state this week found three buildings that tested above the federal limits for lead in the drinking water. One school tested at more than six times the limit.

Flint Mayor Dayne Walling said the city is preparing to carry out the change to lake water, and Genesee County Drain Commissioner Jeff Wright said the process must involve Detroit, Flint and the county.

"Each community has one or more valves that has to be operated," Wright said. "In Detroit's case, they have to supply the additional water, which means they have to increase water production. "In our case and Flint's, we have to flush the existing line and test for bacteria."

Detroit owns the water transmission line from its intake in Lake Huron to the area of Baxter and Potter roads in eastern Genesee County.

The county purchased a 9-mile section of pipeline from the city of Flint in June 2014 that stretches from Baxter and Potter to the area of Richfield and Genesee roads, Wright said.

From there, the city still owns a dormant section of transmission pipe that stretches through the Kearsley Creek to its treatment plant on Dort Highway.

MLive-The Flint Journal could not reach Flint Department of Public Works Director Howard Croft for comment on other preparations by the city, but Walling said work has already started to make the switch happen as soon possible.

The Rev. Alfred Harris, president of the Concerned Pastors for Social Action, said he's "happy, very happy" that the city will no longer use the Flint River as its drinking water source.

"But I wish it would have taken place months ago," Harris said.

The mayor said city officials will discuss their progress connecting to DWSD in detail Monday, Oct. 12, but said the preparation includes legal and contractual work, preparation of transmission lines for a new water source and changes in treatment at the Flint water plant.

Walling and members of Flint's Technical Advisory Committee were told Wednesday, Oct. 7, that the city's change in water source should improve lead levels after about a month.

Virginia Tech professor Marc Edwards said he expects it will take several weeks for lead levels to drop as a result of changed water.

Water test results from Flint homes show lead levels have been rising since the city began using the Flint River for water in April 2014.

The results of Flint's testing for lead since 1992, released by the state Department of Environmental Quality to The Flint Journal last month, showed 10 percent of homes sampled in the city's most recent testing contained 11 parts per billion or more of lead, with six of 69 samples exceeding the federal lead limit of 15 ppb.

Those are the highest lead levels measured in Flint by the city in more than 20 years, the state data shows.

In contrast, the city's tests of Lake Huron water from Detroit for one 10-year period -- from June 2001 until September 2011 -- resulted in just one of 155 samples registering higher than 15 ppb of lead.

Walling said he will ask the City Council and Flint's Receivership Transition Advisory Board to approve the city's $2-million contribution to switch to Detroit-supplied water.

Walling said he "could hardly sleep" once he found out the extent of the city's lead problem two weeks ago. That's when a Hurley Medical Center doctor released a study on blood lead levels in Flint's children.

The study showed the percentage of Flint infants and children with above average lead levels in their blood has nearly doubled citywide since the switch to river water, and has nearly tripled among children in "high risk" areas of lead exposure.

Flint's Lead-Contaminated Water Points To Health Effects Of Ailing Infrastructure (Forbes)

Opinions expressed by Forbes Contributors are their own.

- This flare of lead toxicity reflects how a city's unchecked, decaying infrastructure can lead to serious, avoidable illness affecting children.

In Flint Michigan, there's lead in the drinking water. This is not news to residents; they've been worrying about the smell and look of tap water since the city switched water suppliers in a money-saving effort. Pediatricians in the area have been finding high levels of lead in children's blood.

This flare of lead toxicity reflects how a city's unchecked, decaying infrastructure can lead to serious, avoidable illness affecting children. Lead poisoning is nothing to snicker at. It affects adults, too. Blood specialists are familiar with lead toxicity because it commonly causes anemia. Other manifestations include neurological disease, impaired fertility, heart and kidney problems.

The Environmental Protection Agency (EPA) has an informative page on lead's toxic effects in humans. Because lead toxicity causes irreversible neurological damage, prevention is crucial, and early detection is better than late detection.

Early effects of lead poisoning can be subtle. Tiredness and impaired concentration are non-specific, but probably the most frequent symptoms of this metal-induced illness.

The Centers for Disease Control (CDC) considers a level of 5 micrograms per deciliter (5 μg/dl) of blood as acceptable in young children. This threshold – above which a pediatrician should report a lead poisoning case, and inform the parent – was lowered in 2012, for good reason.

According to the CDC's website, today: "No safe blood lead level in children has been identified. Even low levels of lead in blood have been shown to affect IQ, ability to pay attention, and academic achievement. And effects of lead exposure cannot be corrected."

The EPA suggests an "action level" for lead in water: it should be below 15 parts per billion.

I wrote about lead toxicity a few years back, after hundreds of Nigerian children died in a mining region where some people crushed lead in their homes, and metal contaminated the soil and groundwater.

Flint to Revert to Detroit Water Supply After Lead Complaints (NYTimes)

By MONICA DAVEYOCT. 8, 2015

Photo

Officials in Flint, Mich., announced Friday that the city would no longer use the Flint River as its source of drinking water. Credit Laura McDermott for The New York Times

More than a year after residents of Flint, Mich., were switched onto a water supply that has since been linked to rising lead levels in the blood of some children, state and city officials abruptly reversed course, announcing on Thursday that Flint would return to its old water source.

“The realization of increased lead exposure and a rise in the number of children with elevated blood lead levels was devastating for our community,” Dayne Walling, the mayor of Flint, said at a news conference where he and Gov. Rick Snyder announced plans to spend $12 million to restore the city’s connection to Detroit’s water system, which comes from Lake Huron. “I could hardly sleep knowing that our youngest and most vulnerable children could be at greater risk if precautionary steps were not taken,” said Mr. Walling, who is seeking re-election next month.

Continue reading the main story

Residents of Flint and others lauded the decision. Some had been pressing for it for many months as complaints emerged about strange smells and colors coming from faucets, as well as unexplained rashes, ailments and worries about lead.

Photo

“I’m happy that the city is finally doing what they should have done a long time ago,” said LeeAnne Walters, a resident who says her 4-year-old son was found to have high lead levels in his blood. “They should have taken it seriously back months ago when we tried to tell them, but they chose to ignore it. If they had been doing their jobs from the start, it wouldn’t have taken all this.”

Flint, an economically-troubled city 70 miles from Detroit, switched its water supply to the Flint River last year, after leaving Detroit’s costly water system. As part of efforts to cut costs that had overwhelmed the shrinking city, Flint officials planned to join a new, regional water system, which would also draw water from Lake Huron. But the new system will not be ready until mid-2016, and so the city turned in the interim to the Flint River in April 2014, leaving many residents skeptical.

In addition to the strange appearance of the water in some homes, which some residents began collecting in bottles as evidence, there were other problems. When fecal coliform bacteria turned up in the water, residents were told to boil their water. The extra chlorine that was used to solve that problem caused a new one: elevated levels of another contaminant, total trihalomethanes, which health officials say can lead to liver or kidney problems. At the time, the authorities assured residents that they were handling the issues, and that the water remained within safety guidelines.

But then came worries about lead. In early September, a researcher from Virginia Tech reported that tests of the water in nearly 300 Flint homes showed elevated lead levels in the city. A pediatrician announced that blood tests showed increased lead levels in some children since 2014, and last week state officials corroborated those findings.

In recent days, the city, county and state issued advisories — guidance to residents such as installing lead-removing filters; running water for five minutes before using it; and only using cold water for drinking, cooking and making baby formula. But by Thursday morning, there was a more significant announcement, and it was the one some residents like Ms. Walters had long sought: In about two weeks, the city will stop drawing water from the Flint River and return to Detroit's system until the new regional system is ready.

"We all care about the citizens of Flint, all the citizens in the state, in making sure we can have safe clean water for people," said Mr. Snyder, who said that he will seek $6 million from the State Legislature to help pay for Flint's temporary return to Detroit water. The city is expected to pay $2 million, and the other $4 million will come from the Charles Stewart Mott Foundation.

Health experts suspect that the water from the Flint River is particularly corrosive and may be leaching lead from some of the city's oldest pipes and service lines. They said water from Detroit's facility is treated with substances that help coat the inside of pipes, which tends to prevent such corrosion.

Yet even as officials announced their plans on Thursday, new test results were announced. Sampling of water in Flint's schools over the past week found that three schools had lead levels higher than a federal standard, state officials said. Flint schools, where water fountains have been turned off in recent days, are providing students with donated bottled water.

Flint water crisis: An obscene failure of government (Detroit Free Press)

By The Detroit Free Press Editorial Board 3:47 p.m. EDT October 8, 2015

Empty boxes of water filters lay in piles as Flint residents get free water filters at the Genesee County Community Action Resource Department on Lippincott in Flint on Tuesday October 6, 2015 that state of Michigan is providing to residents with partnership from the Michigan Department of Health Human Services and the Genesee County Community Action Resource Department as part of Governor Snyder's water action plan for the city since high levels of lead have been found in the drinking water that comes from the Flint River. Ryan Garza, Detroit Free Press

(Photo: Ryan Garza, Detroit Free Press)

There's good news: The City of Flint could soon reconnect to the Detroit Water and Sewer Department, a water source that doesn't leach lead from aging pipes into the municipal water supply.

And there's bad news: Three Flint elementary schools have water with lead levels more than 15 parts per billion, in excess of U.S. Environmental Protection Agency guidelines. At one school, Freeman Elementary, water tests found lead levels of 101 ppb. Add this to months of data showing elevated lead levels in homes across Flint, and a higher percentage of children with elevated blood-lead levels.

Lead poisoning causes behavioral and developmental problems in children. It is irreversible. Pregnant women and children are most vulnerable. The U.S. Centers for Disease Control and

Prevention say there is no acceptable level of lead exposure.

And in at least three Flint schools, children have been drinking lead-contaminated water for up to 16 months.

DETROIT FREE PRESS

Snyder seeks $6 million to help fix Flint water

Sixteen months, as Flint residents told the state again and again that their water wasn't right. Sixteen months, as independent researchers meticulously documented rising lead levels in water and in the blood of Flint children. Sixteen months, as the state worked to disparage and discredit the work of respected scientists, even as its own data supported those findings.

At a press conference Thursday, Gov. Rick Snyder appeared chastened.

He should.

Snyder appoints the head of the Michigan Department of Environmental Quality, the agency charged with ensuring that drinking water throughout our state is safe.

In Flint, it failed.

Flint's decisions first to join a new regional water authority, and then to pump water from the Flint River — ending a decades-long relationship with Detroit's system — were made while Flint was under state oversight, during the tenure of a Snyder-appointed emergency manager charged with balancing Flint's budget. That system is justified by the governor's constitutional responsibility to attend to the health and wellness of all Michiganders.

In Flint, he failed.

This newspaper twice endorsed Snyder for governor, albeit with grave reservations. But because of the relative weakness of his opponents, the leadership he displayed in resolving Detroit's protracted financial crisis and our hope that he would use his business acumen to ensure that government better served people, he narrowly won our endorsement.

Last year, in a detailed analysis of Snyder's record, this editorial board expressed our dissatisfaction about Snyder's first term: "The governor balanced the budget at the expense of cities and school districts. His disdain for politics is inappropriate in the state's chief politician; his deficiencies as a deal-maker have sometimes resulted in terrible consequences for Michiganders."

This, we wrote, was Snyder's most profound flaw: "He has got to see people, not sums, as the bottom line of the state balance sheet."

We wrote that he rarely exhibited strong, decisive leadership, that he must "grow into a more sure-footed, principled leader." That we were fearful of what Snyder's second term could hold.

Snyder defended the state's decisions on Thursday, saying it had followed EPA and MDEQ testing protocols. The state did the minimum required, his responses implied. Why should it have to do more?

This is what Snyder does not understand. To lead a state, accountancy is not sufficient. To lead a state, a balanced budget is not sufficient. To lead a state, doing only what is required is not sufficient.

The modern vogue for paring services and cutting budgets is an insidious misunderstanding of the foundations of government. Fiscal conservationism is correct to suggest that government should recognize the value of a dollar. But it is absolutely incorrect when it considers the value of a dollar more significant than other values. A dollar saved at the expense of public safety. A dollar saved at the expense of Flint's children. A dollar saved at the expense of the public trust. These are equations that can never balance.

At this math, Snyder has consistently failed.

DETROIT FREE PRESS

Flint water decision inexcusable

When Flint began to pump river water, it opted not to add a chemical that would have created a film inside its aging service pipes, preventing lead from entering the water. MDEQ signed off on that plan. Snyder's representatives have said both decisions were in progress before Flint's emergency managers were appointed, belying the reality of an emergency manager's broad authority in the city he or she is charged to lead.

That Flint has aging service lines with lead materials shouldn't have been a surprise. That Flint would need to treat the water it pumped to ensure it could flow safely through those lines shouldn't have been at issue.

Here is all we can surmise: Pumping Flint River water saved money. And that, as they say, was that.

Snyder says that his team will issue an "after action report," with recommendations about how things could have been done differently. This is a necessary step and should be conducted by a team with sufficient independence from Snyder's office — and the MDEQ — to reach impartial conclusions.

Snyder has asked the Michigan Legislature to contribute $6 million of the $12 million it will cost

Flint to purchase its water from Detroit. The Charles Stewart Mott Foundation and the city itself will cover the remaining costs. The transition could be complete within two weeks. We applaud the Mott Foundation for its contribution and urge the Legislature to approve its portion of the funds required without delay.

Snyder and other officials have said Flint will continue to work to replace lead service lines. This is necessary work. The state has devoted $1 million to pay for water filters for Flint residents, another helpful measure.

People. Not sums.

Thus endeth the lesson. It is one our government should not forget. It is one Flint's children can't forget.

***Correction**: An earlier version of this editorial incorrectly stated the number of schools that have water with high lead levels.*

LANSING, Mich. (NEWSCHANNEL 3) - Tuesday morning Michigan Governor Rick Snyder called for the city of Flint to again get its water from Detroit's system.

The announcement comes as the state scrambles to address a public health emergency over lead in the Flint water supply.

The governor is asking state lawmakers for six million dollars to help the city reconnect to a safe water supply.

Right now Flint's water is leaching lead from old pipes as it flow into homes.

The water is coming from the Flint River, which is treated but still has corrosive features.

State should pay for its own mistakes in Flint water crisis

Snyder seeking $9.35M in state aid for Flint water crisis, and Michigan lawmakers are on board

Switch from Flint River to Detroit water expected to take two weeks

All Stories

FLINT, MI -- Gov. Rick Snyder has announced a $16 million plan to reduce lead in the city's drinking water, and he and other key players in carrying it out made several key points to remember on Thursday, Oct. 8.

Among them:

1. When did the state know of Flint's lead problem?: The first indication of rising lead levels in Flint drinking water came from the city's own sampling of water inside homes in the city soon after it changed its water source from Lake Huron to the Flint River.

Results from 100 water samples collected from Flint in 2014 showed increasing lead levels with 10 percent of homes tested at 6 parts per billion of lead or more.

Those were the highest lead levels measured in Flint by the city in more than 20 years, the state data shows.

That testing was completed more than nine months ago, but because the levels did not meet the federal action limit of 15 ppb, 69 more tests were done in 2015, and lead levels continued to rise.

Michigan Department of Envronmental Quality Director Dan Wyant said the state notified the city of the need to develop a lead action plan in August 2015, but the concerns about lead levels were never publicized as a potential public health threat until researchers from Virginia Tech university pushed the issue.

2. Water in schools: In the past seven days, the state tested Flint School District buildings for lead in water, finding three buildings that tested above the federal limits.

Snyder said he is planning to spend $4 million on non-Detroit-water expenses in Flint, and the school district will get immediate attention, including a complete evaluation of the plumbing systems in all 13 city schools.

Testing for lead in water in schools could also be a broader issue moving forward, as the governor said there "probably should be" school water testing elsewhere in Michigan.

3. A change in tone: State officials, including the governor, on Thursday praised the work of a Hurley Medical Center doctor who published a study on the blood lead levels of Flint children since the city changed its water source.

"The Flint Hurley data and the confirmation (from the state Department of Health & Human Services)...just reinforces the significance of this issue," the governor said.

A spokeswoman for the state DHSS just two weeks ago dismissed the Hurley study, saying the state's more extensive data "is not in line" with the findings.

Likewise, there was no questioning Thursday of water testing by Virginia Tech, which first brought lead concerns to light.

Just one month ago, a spokesman for the state DEQ said of the testing that while the state "appreciates academic participation in this discussion, offering broad, dire public health advice based on some quick testing could be seen as fanning political flames irresponsibly."

4. Lesson learned: The governor said the state wasn't immediately on alert because of Flint's water quality because water coming out of the city's treatment plant met all state and federal guidelines for lead.

When the water interacted with lead service lines and lead solder in pipes, however, it caused significantly more leaching of lead into water than Lake Huron water did.

"That's something that you learn through this process," Snyder said.

5. No so fast: While Snyder said the immediate concern is addressing the public health emergency here rather than assigning blame, he said decisions that were made will be reviewed and changes could be recommended.

Others said more answers are still necessary or different approaches required.

"I'm heartened that the residents of Flint will soon have cleaner, safer water flowing from their taps, but I'm determined to get answers to make sure this doesn't happen in my community or other communities ever again," said state Senate Minority Leader Jim Ananich, D-Flint. "I want to be clear — this is not a victory for my community. This is a fix to a problem that never should have happened."

U.S. Rep Dan Kildee, D-Flint, said, in part, "Flint is a financially distressed city, and it should not have to empty out its bank account to pay for the state's failures.

"The decision to switch to the Flint River water source was made while the city was under state emergency management, and now it is incumbent on Gov. Snyder and the state to fix – and pay – for the problem they created."

6. What's next: Flint Mayor Dayne Walling said the City Council and Receivership Transition Advisory Board will be asked to take action to fund $2 million to help pay for Detroit water for the next nine months.

That could start as soon as Monday, Oct. 12, when the council is scheduled to meet in a committee at 4:30 p.m. and a regular meeting at 6 p.m.

The flow of Detroit water is expected to begin within the next two weeks.

---

http://www.detroitnews.com/story/news/politics/2015/10/08/flint-water/73623958/

Jim Lynch, The Detroit News 11:34 p.m. EDT October 8, 2015

(Photo: David Guralnick / The Detroit News)

State and local officials hope switching Flint back to Detroit's water system, announced Thursday, will solve lead contamination issues there in the short run, but the situation exposed a health issue that may be happening in other parts of the state.

Water sampling at Flint's schools discovered a few instances of lead levels that exceed the federal safety standard. The findings raised the possibility that lead problems may exist in other parts of the state, including Metro Detroit.

Private and public schools are not covered under federal testing guidelines, said Dan Wyant, director of Michigan's Department of Environmental Quality.

State testing of four water samples from three Flint schools came back with lead levels exceeding the 15 parts per billion standard set by the federal government. A total of 37 water samples were taken from 13 Flint schools.

"This data underscores the need for a complete and thorough evaluation of the plumbing system in each school," Wyant said.

State officials plan to contact all schools in the state, urging them to assess their lead levels in drinking water. Facilities built in the last quarter-century are unlikely to have lead issues, but others built before the mid-1980s may have lead connections and could be a problem, according to the agency.

"Schools that have lead infrastructure should be testing," Wyant said.

The Michigan Association of School Boards said it "absolutely supports anything that helps to keep students safe," but added that the state needs to chip in more money for school infrastructure like water pipes.

"Michigan is one of just a handful of states that does not offer funding for some portion of school construction," said John Tramontana, spokesman for the school board group. "We should be looking at ways to help schools pay for infrastructure improvements to ensure our students are learning in a safe environment."

Lead poisoning can cause learning disabilities and, at high levels, may lead to seizures, coma and death, according to the Centers for Disease Control and Prevention.

Reconnecting to Detroit

Gov. Rick Snyder appeared in Flint Thursday to announce that the city will reconnect to the Detroit Water and Sewerage Department in two weeks. The hookup for up to a year is expected to cost $12 million since the city since April 2014 has been getting its drinking water free from the Flint River.

The city will tie into the Detroit system until it can finish construction of its own pipeline to Lake Huron, which is where Detroit also gets its water.

"I'm relieved," said Flint Councilman Kerry Nelson. "I am thrilled for this community that we reached across the aisles. We've come together."

Residents have complained of a foul smell, taste and appearance of the river water for the past year and a half, but worries heightened two weeks ago when researchers determined many Flint children were showing higher-than-expected levels of lead in their blood.

Sue McCormick, interim CEO of the Detroit water system and the regional Great Lakes Water Authority, embraced the opportunity to "provide residents with clean, safe drinking water."

Senate Minority Leader Jim Ananich, D-Flint, was more subdued.

"I view this not as a victory for our community, but as a fix that is unfortunately necessary," said Ananich, who was in Flint for the announcement.

All local schools have been using bottled water for the past two weeks, yet it's unclear how long students there may have been exposed to contamination. Eisenhower Elementary, Barnell STEM Academy and Freeman Elementary showed lead levels above the safety standards.

Since schools are not covered under federal testing guidelines, there is no baseline of previous testing information with which to compare, DEQ's Wyant said.

The Michigan Environmental Council called for even more safety measures, including testing every Flint child for lead exposure and investigating the cost and feasibility of testing all Michigan children for lead.

"Restoring the public's trust will be a long, difficult process," but the state's adoption of the group's recommendations "can begin rebuilding trust and make the best of an awful situation," Andy McGlashen, communication director of the MEC, wrote in a post on the group's website.

Snyder wants the state to cover half — $6 million — of the cost for the Detroit water. Flint will pay $2 million, and $4 million will come from the Charles Stewart Mott Foundation.

Two key legislative appropriations chairmen said Thursday that Snyder is likely to find the votes to secure the state's $6 million contribution. .

"This is a public health emergency and we need to get it done," said Rep. Al Pscholka, R-Stevensville, who chairs the House Appropriations Committee. "It probably will have to come out of two or three (state) departmental budgets, but we've got to do it."

Senate Appropriations Committee Chairman Dave Hildenbrand, R-Lowell, said fellow GOP senators have questions about whether the money would be a grant or a loan, which would be repaid. But he, too, supported the idea.

"It's in the state's best interests to ask these questions, but we have to do it quickly," Hildenbrand said. "It's a public health emergency."

$2M city payment riles rep

Flint Mayor Dayne Walling described the Detroit water reconnection as the best and fastest option to "stabilize the infrastructure system" and considered the $2 million contribution "money well spent."

But U.S. Rep. Dan Kildee, the Flint Township Democrat who represents the area, objected to the city's payment.

"Flint is a financially distressed city, and it should not have to empty out its bank account to pay for the state's failures," Kildee said.

"The decision to switch to the Flint River water source was made while the city was under state emergency management, and now it is incumbent on Gov. Snyder and the state to fix — and pay — for the problem they created."

The decision to switch to the Flint River was seen as a move to save money after years of officials and residents complaining about Detroit water rates.

Flint River water, however, has been shown to be more corrosive than the Lake Huron water provided by Detroit.

When that river water sits in lead plumbing connections, which are found in many of Flint's older houses in lower-income neighborhoods, it takes in the harmful substance.

Pressed Thursday on whether the decision to switch to the Flint River was a mistake, Snyder deflected by saying the state will put together an "after-action" report. He previously said it wasn't an error.

When did state know about lead in Flint water? 6 takeaways from Snyder plan

Toxic water in Flint schools is 'mind-baffling,' says elementary school parent

State should pay for its own mistakes in Flint water crisis

Snyder seeking $9.35M in state aid for Flint water crisis, and Michigan lawmakers are on board

Switch from Flint River to Detroit water expected to take two weeks

All Stories

FLINT, MI — Parent Alisa Oliver was shocked to learn water tested at Freeman Elementary School had more than six times the federally allowable level of lead.

She was there Thursday, Oct. 8, to pick up one of her three children early from school.

Information that the level of lead in water far exceeded federal standards at Freeman was released earlier Thursday at a news conference in Flint, where Gov. Rick Snyder and other state and city leaders announced a plan to reconnect the city with the Detroit water supply.

"That explains the letter they sent home and why they can't drink the water," Oliver said. "It's kind of mind-baffling."

Oliver has children in first, second and fourth grades at the school.

Oliver said lead in the school's water is of extra concern for her youngest child, who had previously suffered from lead poisoning because of the lead-based paint inside a previous residence.

Oliver said she was moving to the other side of town, and her kids would be pulled from Freeman.

The school is one of three in the Flint School District that tested above 15 parts per billion for lead, the safety standard set by the federal government.

Eisenhower Elementary, along with the Brownell/Holmes STEM academies, also exceeded the limit, according to Michigan Department of Environmental Quality Director Dan Wyant.

Oliver learned from The Flint Journal that the water at Brownell/Holmes also had toxic levels of lead in its water.

"That's horrible," she said. "We really don't have a choice because where we're moving to, the closest school they already closed. We just tell them, 'Don't drink the water.'"

Flint schools stopped using city water for drinking after a study by a doctor from Hurley Medical Center showed the number of infants and children in Flint with elevated blood levels has tripled since the city started using the Flint River as its source for water.

Snyder was in Flint on Thursday, Oct. 8, along with Wyant and other state officials, to announce a plan for the city to buy nine months of water from the Detroit Water and Sewerage Department with at least $6 million coming from the state, a $4 million grant from the Charles Stewart Mott Foundation and $2 million from the city.

Water at schools was not tested for lead because federal guidelines didn't require it.

"We followed the federal requirements for water testing for the lead and copper rules," Snyder said. "There is no inclusion of schools. That'll be one of the items to talk about — should there be more testing or testing done for water quality in schools?"

The state is calling for children at the three Flint schools where lead was detected above federal guidelines to get their blood tested to see if they have elevated blood lead levels, officials said.

"Flint Community Schools believes this is a good first step; however, we urge state and local officials to act quickly," Superintendent Bilal Tawwab said in a statement. "We thank the MDEQ for making Flint Community Schools a priority."

Wyant said four of 37 water samples from 13 schools last week exceeded the 15 ppb standard.

Eisenhower had two samples, of 16 ppb and 28 ppb, while Freeman had a sample that showed 101 ppb, Wyant said. The state didn't release the lead level for Brownell/Holmes.

"The data clearly demonstrates that more detailed sampling needs to occur so that various sources of lead contamination contained within each perspective school's plumbing can be identified and addressed," Wyant said. "The data underscores the need for a complete and thorough evaluation of the plumbing in the schools to determine a corrective action plan."

The MDEQ will continue to help the Flint School District with evaluations, sampling and corrective measures, Wyant said.

"Schools should continue use of bottled water," he said.

The Michigan Department of Health and Human Services will provide eight staff toxicologists in Flint to help with data analysis of water.

There also will be free testing for any other Flint school, including day cares and Head Start facilities, state officials said.

"We are working proactively with the community and continue to ask everyone to help our students by providing bottled water and filter donations until we find a sustainable, long-term solution that can ensure our students have access to safe, clean drinking water in our schools and in their homes," Tawwab said.

Flint City Council Vice President Wantwaz Davis called on the Flint School District to close any building with water testing higher than 15 ppb of lead.

"Children's welfare is of the utmost consideration," Davis said. "I feel they should close the schools down until" more testing proves the water safe.

The Rev. Alfred Harris, president of the Concerned Pastors for Social Action, said he was shocked to hear news of the lead levels in some Flint schools.

"I'm happy, very happy" that the city will no longer use the Flint River as its drinking water source, "but I wish it would have taken place months ago," Harris said.

Melissa Mays, a founder of Water You Fighting For, a grass-roots group that has pushed for ending use of the Flint River, said the news about elementary school children drinking water with elevated levels of lead is especially troubling.

"It breaks my heart," Mays said. "That made me want to cry and throw up at the same time. Those poor kids."

Flint is returning to the Detroit water system, but problems remain

Flint is going back to Detroit water.

Gov. Snyder announced the $12 million plan to hook the city of Flint back up to Detroit water

Credit Steve Carmody / Michigan Radio

The state, the city and the Charles Stewart Mott Foundation together are kicking in $12 million to shut off the tap to the Flint River.

A year and a half ago, city leaders stood in Flint's water plant and raised plastic glasses to toast the city's switch to the Flint River.

Eighteen months later, Governor Snyder has announced the end of the Flint River experiment.

"I'm in full support of a return to the Great Lakes Water Authority (formerly the DWSD)," Snyder told a mid-morning news conference in Flint, "and that we do this in a prompt and efficient fashion."

It may only take a few weeks to bring to an end what has become a failed experiment.

Since shutting off the pipeline from Detroit and tapping the Flint River for the city's drinking water, Flint residents have endured a progressively nightmarish existence every time they filled a glass from their kitchen faucet.

The cloudy water smelled and tasted bad. Then there were E. coli outbreaks. The heavy chlorination in response to those outbreaks left people with burned skin and hair falling out in clumps.

A disinfectant by-product landed the city in violation of the Safe Drinking Water Act for a year.

And then there's lead.

A Virginia Tech research team found 'serious' levels of lead in the tap water in a significant percentage of Flint homes. Other tests showed blood lead levels in Flint children have doubled since the switch.

New tests of drinking water in 13 Flint schools show 4 schools with seriously high lead levels. At one school, Freeman Elementary on the city's south side, the water tested at more than 100 parts per billion. That's more than six times the federal action level for lead.

"We are suggesting we have specialized staff go in and really track who has elevated blood levels," says Nick Lyon, the director of the Department of Health and Human Services, "You don't know the facts until you know the facts. So we're going to test these children."

Pastor Allen Overton has been a leader in the grassroots movement to return Flint to Detroit water. He listened as the governor and other officials talked about the steps being taken to quickly get Detroit water flowing to Flint again.

Overton blames Flint's mayor and other city leaders for not asking the governor for help sooner.

"If they had (brought) it to the governor before now I think he would have moved before now," says Overton, "But they were slow about getting it to the governor. So that's why I think it took so long to get to this point."

The head of Flint's public works department says it will take about two weeks to re-connect with Detroit's system.

But that doesn't end Flint's water woes.

The highly corrosive Flint River water has caused, by some estimates, tens of millions of dollars in damage to older lead and iron pipes in Flint. Lead will continue to leach into the water even after the switch to a less corrosive water source. Then there are the long-term health effects on children who have been drinking water with high levels of lead for more than a year.

Flint Mayor Dayne Walling says the city will need help repairing and replacing the city's aging and decaying water infrastructure.

He suggests other cities should pay attention to what's been happening in Flint.

"There are important lessons from Flint's experience," says Walling, "We need to take a look at federal and state policy reforms, that include expanding water safety sampling to include our most vulnerable families."

"We need to look at factors of affordability in public health and infrastructure all being assessed together," Flint's mayor adds.

The governor says he's asking the Michigan legislature for half the expected 12 million dollar cost of getting Flint hooked back up to Detroit water. That's until next year, when a new pipeline from Lake Huron is expected to be ready. The Mott Foundation is kicking in four million dollars and the city will come up with two million dollars.

This experiment that was supposed to save millions of dollars will most certainly will end up costing the city and the state dearly.

Switch from Flint River to Detroit water expected to take two weeks

All Stories

The following is an opinion of The Flint Journal Editorial Board.

Another slap in the face.

Today's long overdue announcement that Flint will reconnect to the Detroit system is welcome relief in what has become a deluge of bad news when it comes to Flint water.

But rather than apologize for a public health emergency that was created on the watch of a state-appointed emergency financial manager, Gov. Rick Snyder came to Flint and told the city that it will have to help pay for his administration's mistake.

To the tune of $2 million.

Asking Flint residents to sacrifice money the city doesn't have to fix a failure by the state is an outrage.

And the bill for Flint's people would likely have been even larger if the C.S. Mott Foundation had not come to the rescue with the promise of another $4 million for the water switch.

Sorry, Governor, but you assumed responsibility for Flint two years ago when you declared the city unfit to manage itself and wrested local control from our leaders.

The city didn't ask to be taken over — you took it.

State-appointed leaders gambled with the safety of our drinking water in order to save money.

And when push came to shove, state-appointed leaders gambled with the safety of our drinking water in order to save money.

Under your latest plan, the state will contribute $6 million to a fix which everyone agrees may not even work in the end.

We have yet to hear a definitive guarantee that a move back to Detroit water will lower lead levels in the water and, given the state's track record so far, residents would be wise to reserve judgment even if such guarantees were made.

At the same time they announced the switch back to Detroit, Snyder and his administration revealed that lead problems at Flint schools may be worse than anyone thought.

Rather than make Flint pay, Snyder should find the money elsewhere and allow the city to invest that $2 million in its aging infrastructure.

Flint has already paid the price, Governor, by drinking toxic water that was forced upon the city, and the most frightening thing is we have no idea how many of the city's children will continue to pay that price in the form of long-term health problems.

Flint is done paying for your mistake, Gov. Snyder.

It's your turn to pay.

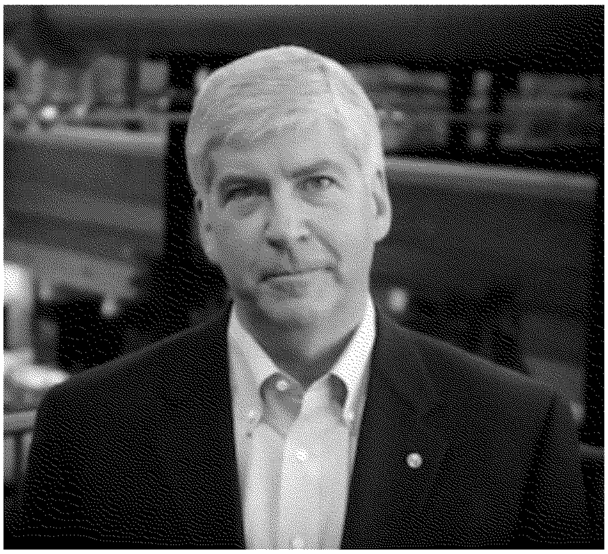
http://epnewswire.com/stories/510641420-michigan-announces-action-plan-for-lead-levels-in-flint-s-drinking-water

Thursday, Oct 8, 2015 @ 6:46pm By EP News Wire Reports

0 0 0 2



Michigan Gov. Rick Snyder announced a comprehensive action plan to address drinking water quality issues in Flint on Oct. 2.

The plan addresses issues that include excess lead in some residents' tap water due to older plumbing.

“We are focused on helping ensure safe, clean, accessible drinking water and addressing and mitigating concerns and protecting public health,” Snyder said. “Today’s action plan builds upon ongoing work with local, state and federal agencies and our partnership with city and community leaders. Together, we are working to ensure that all Flint residents have accurate information and know that help is available to address potential problems.”

The plan was developed with federal, state and city leaders and includes measures that include immediate testing of the public school drinking water and providing free water and free water filters to the city’s residents. These measures are critical, as the state has seen an increase in childhood blood lead levels in the community, according to the Michigan Department of Health and Human Services (MDHHS).

“While we cannot conclusively say that the water source change is the sole cause of the increase, this analysis supports our efforts as we take active steps to reduce all potential lead exposures in Flint,” MDHHS Director Nick Lyon said. “As part of this, we are working closely with our public and private partners to provide Flint residents on MDHHS assistance programs with free water filters and inform families about the steps they can take to reduce all lead exposures in their home."

<hr size=2 width="100%" align=center>

http://epnewswire.com/stories/510641840-michigan-governor-calls-for-funding-to-improve-flint-drinking-water

Thursday, Oct 8, 2015 @ 3:03pm By EP News Wire Reports

0 0 0 New

Michigan Gov. Rick Snyder announced Thursday that he is requesting the state legislature to contribute $6 million (USD) to the reconnection of Flint with the Great Lakes Water Authority until the Karegnondi Water Authority (KWA) pipeline is completed, with Flint and the Charles Stewart Mott Foundation providing the remaining $6 million.

"All Flint residents need clean, safe drinking water," Snyder said. "The technical experts helping the city on its water advisory all agree this move back to the Great Lakes Water Authority provides the best public health protection for children and families. This effort today is the result of people coming together to solve a problem."

Providing protection from the effects of runoff issues and already established corrosion control methods, reconnection to Detroit's water system will benefit Flint's public health, but it will not completely resolve drinking water issues, which are caused in some instances by aging infrastructure and home pipes and plumbing.

"Reconnecting to Detroit is the fastest way to deliver clean, safe water to Flint and stabilize the infrastructure system," Flint Mayor Dayne Walling said. "I appreciate the state, the Mott Foundation, Detroit and the county's participation in a solution for Flint's water problems. The health and safety of Flint's families, children and seniors is my top priority, and reconnecting to Detroit is a major step that the city could not take alone given budget constraints."

http://www.hollandsentinel.com/article/20151009/NEWS/151009201

Holland, Mich.

This weekend I was able to attend the MEA, Michigan Education Association, Fall RA, Representative Assembly, in our state's capitol. This being my second such meeting I was much more aware of what the procedures and norms were in terms of voting. There was, however, one incident that I never, ever thought I would hear or see in my lifetime. Two teachers from the Flint area got up to the microphone and made an impassioned plea for money to buy bottled water for children living in Flint, Mich. They passed around a few envelopes to collect these funds. At the end of the day the tally was over $680 for water for Flint's children.

Our state is the "water wonderland." A very appropriate name, at that. We have the blessing of having frontage on four of the five Great Lakes. We have numerous smaller lakes. Holland water is reputedly some of the best in the Great Lakes regions. Thanks, BPW!

Our church special offering for next week goes to our missionaries in Hungary, the Ottenwesses. Their church, which primarily caters to the Roma (gypsies), is near a rail line that recently has seen the huge influx of Syrian refugees fleeing their nation's civil war. That I can understand. But having to pass the hat for clean drinking water for residents of our very own state? Incredible. Unacceptable, too.

Maybe the Mackinac Center, their minions in our state legislature and the Nerd should take a little more interest in this situation and put union busting and right to starve legislation on the back burner long enough to ensure the good people of Flint a safe, potable water supply. Apparently in this case there are many children being left behind! I am really not sure how this is supposed to help their almighty standardized testing scores. This is a disgrace to our state and our citizens. At least Mrs. Gamrat and her beau are out of the picture and these "leaders" can now get back to what they should be doing. Leading and helping their constituents.

Jeff Raywood

It's not the government but private citizens and researchers who have been battling to reveal dangerous lead levels

October 8, 2015 1:00PM ET

by Azure Gilman @azuregilman

Officials declared a public health emergency this month for Flint, Michigan, advising residents not to use the city’s tap water without filtering after studies showed elevated lead levels in the water — and in children’s blood.

But it was a handful of citizen activists and independent researchers who finally got the danger acknowledged, even as some officials denied there was a problem.

High levels of lead found in Flint drinking water 3:40

Al Jazeera America News | October 6, 2015

At a press conference on Thursday morning, Michigan governor Rick Snyder announced that after meeting with a technical advisory council, he was in full support of Flint returning to the Great Lakes Water Authority, from which the city previously got its water. Snyder said that the change would cost $12 million, and that he would ask the Michigan legislature to provide $6 million towards that cost. The Mott Foundation has said that they will cover $4 million, and the City of Flint will provide $2 million.

In April 2014, economically battered Flint switched its water source from Lake Huron to the less-expensive Flint River. Researchers at Virginia Tech say the new water is more corrosive and is leaching lead from pipes into the drinking water**.** After the switch, the number of children with elevated lead levels rose to 4 percent in 2015, from 2.1 percent in 2013, according to a study by a pediatrician at Hurley Medical Center in Flint. In some areas, that number rose as high as 6.3 percent from 2.5 percent.

One of the residents to raise an early alarm was LeeAnne Walters, after her 4-year-old son Gavin started breaking out in rashes in July 2014. He had to take Benadryl every time he took a bath, and Gavin was diagnosed with lead poisoning in April of 2015, Walters said.

The City of Flint, along with the Michigan Department of Environmental Quality (MDEQ), tested the water in Walters’ home and found elevated lead levels. But Walters said that the city government denied anything was wrong with Flint’s water.

“They went around and had meetings telling everyone that the problem was specific to my home due to my internal plumbing,” Walters said. "It’s infuriating. You're paying to be poisoned. And you're paying for this, and you're being called a liar and stupid by the emergency manager and the DEQ in a public meeting."

The MDEQ said Walters “had an unusually long lead service line, which appears to have contributed to her situation. However, this question is better addressed by the city.” The City of Flint had not responded to a request for comment at the time of publication.

Flint Mayor Dayne Walling drank tap water on TV in July 2015 in an attempt to ease residents’ concerns. He said that he and his family drink the city’s water every day.

The City of Flint and the MDEQ tested the water after the switch to the Flint River, and said it was fine. But there were problems with those tests, residents and researchers said.

The MDEQ lowered the number of samples required to 60 from 100, according to Marc Edwards, who lead the water testing research team at Virginia Tech, and Curt Guyette, an investigative reporter with the American Civil Liberties Union of Michigan. A spokesman for the MDEQ, Brad Wurfel, said that the sample requirements are based on population, and that the requirement was lowered because new census data showed Flint's population had dropped below 100,000. He also cited difficulty in getting enough people to send in water sample kits for testing. "Participation has historically been a well-documented challenge in Flint," he said.

In a report [PDF] obtained through a Freedom of Information Act request, the City of Flint said that the homes they tested had lead pipes. But when Guyette confronted officials in September 2015 about how they were able to determine that every house tested had lead service lines, which run under city streets, a utilities administrator for the City of Flint said on camera: "We're not, really. We threw bottles out everywhere just to collect as many as we can to try to hit our number." He was referring to bottles used to collect water samples, and the number of homes they were required to sample.

"In essence they did their testing, and they got high lead, even though they didn't look at the homes they were supposed to," Edwards said. "They were supposed to look at homes with lead pipes, and they just randomly sent bottles out, which would make lead look lower than it is."

In late April of this year, LeeAnne Walters called Edwards, who said he then tested her water independently. In one sample, he said he found that she had lead levels of 13,200 parts per billion. The EPA allows a lead level of 15 parts per billion in tap water.

Along with fellow Flint resident Melissa Mays, Walters started an advocacy group called Water You Fighting For? Together with the ACLU of Michigan, Concerned Pastors for Social Action, and the Democracy Defense League, the activists helped get Edwards to come to Flint and conduct an independent analysis of the water.

Edwards said he paid for over $40,000 worth of testing out of his own pocket. He eventually got funding from the National Science Foundation to cover the cost. He said he sent water test kits to hundreds of homes, expecting to get 25 percent of the kits returned. But Water You Fighting For? and the other activist groups helped promote and organize the testing, and 90 percent came back.

"Achieving a 90 percent return rate was something I never thought possible," said Edwards.

Meanwhile, Dr. Mona Hanna-Attisha at Hurley Medical Center did her own study of blood lead levels in the children of Flint, and announced the results on Sept. 24. The study was not requested by the city or the state. Rather, Hanna-Attisha said she had heard from a friend at a dinner party that Flint had water problems. When she asked someone from Genesee County Health Department about it, she said she was told that that the department didn't control water.

"That's when I started my crusade," she said.

The long-term repercussions of Flint's water problems could be devastating. The U.S. Centers for Disease Control and Prevention says that lead exposure in children is "particularly harmful to the developing brain," and is associated with decreased intelligence, among many other symptoms. Hanna-Attisha said that Flint children could have long-term problems because of early lead poisoning.

"In five years there's going to be more kids who need early intervention and special education," Hanna-Attisha said. "And in 15 to 20 years, there may be more kids that are going to be in the criminal justice system. The costs are tremendous… a whole generation of kids."

As late as Sept. 28, The Associated Press quoted MDEQ spokesman Brad Wurfel as saying, "Flint's drinking water is safe in that it's meeting state and federal standards."

In response to questions from Al Jazeera, Wurfel said that "the city, the state and the U.S. EPA are taking necessary steps to address lead concerns in Flint. Free lead filters for all Flint residents are a precautionary step to ensure public health while we look more closely at exposure concerns."

Virginia Tech water expert Edwards said he is ashamed that Flint's water situation was allowed to happen in the United States. "I shudder to think what would have happened if the residents hadn't figured this out," Edwards said. "Because the kids would still be drinking this lead water, being encouraged to drink this lead water when it was not safe."

1 of 5 Mich. Gov. Rick Snyder announces support in the city of Flint’s plan to switch back to

Detroit water due to high lead levels during a news conference in Flint, Mich. on Thursday Oct. 8, 2015. Flint stopped using water from the... More

By JEFF KAROUB

DAVID EGGERT

The Associated Press

FLINT, Mich. (AP) — Michigan Gov. Rick Snyder on Thursday called for Flint to switch back to Detroit's water system to address a public health emergency over lead and grapple with broader concerns about the effects of the aging pipes distributing the city's water supply.

Flint stopped using water from the Detroit system last year as a cost-cutting measure, opting instead for a supply direct from the Flint River. But since the swap, residents have complained of the water's funky smell, taste and appearance, as well as adverse health reactions, and doctors discovered that the corrosive river water was drawing lead from aging pipes in some homes.

The governor announced he would ask state lawmakers for $9.3 million, including half of the $12 million needed to reconnect Flint to Detroit's system through next summer. Then the city would transition to a new regional water authority drawing water from Lake Huron.

Snyder said Flint would provide $2 million and the Charles Stewart Mott Foundation, which has supported local institutions and organizations for decades, has committed $4 million.

"It will be better for the citizens of Flint, in terms of public safety, which is our paramount concern," he said at a news conference at the foundation's office in Flint.

It is the "fastest way to protect public health and stabilize Flint's water system," Flint Mayor Dayne Walling said, adding that the city should be reconnected to Detroit's system within about two weeks.

Leaders in the Republican-controlled Legislature signaled a willingness to help.

"There's an immediate public threat that we have to take seriously and address. We just have to figure it out," said Senate Appropriations Committee Chairman Dave Hildenbrand, R-Lowell.

The announcement came a day after experts in health, water and science recommended that Flint reconnect to Detroit's water system while it awaits a new pipeline to Lake Huron.

The Snyder administration released results from a lead-screening program in schools and homes. Of 37 samples at 13 school buildings, four samples spread over three buildings exceeded the federal action level of 15 parts per billion. One school was flagged at more than six times the limit.

Flint is under a public health emergency due to lead in the water supply. Exposure to lead can cause behavior problems and learning disabilities in young children.

Flint, which was under state emergency management when it switched water supply, had long chafed at the Detroit Water & Sewerage Department's rising prices. Flint officials estimated the cost of buying water from Detroit this year at $16 million, and the overall annual cost of switching to the new Karegnondi Water Authority would be $12.5 million.

Snyder said switching back to Detroit is the best short-term solution, but the "long-term, real question is about lead pipes and lead service lines." He said the state is working with the U.S. Environmental Protection Agency on how to improve and expand its lead and copper testing in school water supplies — something not currently required by the federal government.

"That needs to be a broader discussion," Snyder said. "We still need to have a discussion about infrastructure."

State government and nonprofit groups have been distributing filters and bottled water to Flint homes and schools.

Snyder also said he would ask legislators for more than $3.3 million for filters, free lead testing and additional staff to conduct health exposure monitoring for lead in drinking water. His administration previously had committed nearly $1.3 million separate from the legislative spending process.

Flint Councilman Eric Mays, who has been a vocal critic of decisions related to the water system, welcomed the developments but questioned how long it took and how much more money would be needed. He credited local activists, some of whom have been raising concerns about lead for months.

"I thank a lot of people for coming out — a little late — but it's better late than never," he said.

Flint resident A.C. Dumas said he's upset with how things have been handled.

"I feel betrayed," he said. "I feel that the elderly and the children, all of us feel betrayed."

Peter:

Thanks for sending. I know this is sensitive topic but I have to ask a follow up question.
In those July discussion, did EPA recommend, request, demand that additional corrosion control measures be taken?
As you know, there's a lot of discussion about what happened here and we're trying to understand what was communicated, in what form, at what time.
I'm trying to wrap this up today, so I'd need an answer this afternoon.
Again, thanks.

Peter:

Thanks for sending. I know this is sensitive topic but I have to ask a follow up question.
In those July discussion, did EPA recommend, request, demand that additional corrosion control measures be taken?
As you know, there's a lot of discussion about what happened here and we're trying to understand what was communicated, in what form, at what time.
I'm trying to wrap this up today, so I'd need an answer this afternoon.
Again, thanks.
John

The below statement is from the EPA. You may attribute this statement only to an EPA spokesperson or EPA.

"EPA did not transmit the draft report to anyone on the cc list. EPA discussed the issues raised in the report with MDEQ in July."

Thanks. Let me know if you have any other questions.

I'll defer to Tinka. But it may be better to simply reference MDEQ's 8/17/15 letter to Flint -- and have the reporter obtain it from either the State or the City (unless EPA is cc'd on the letter?) ... I don't have it myself so we'd need to get from Water Division if we are going to attach it.

Let's say: Yes. US EPA recommended corrosion control and MDEQ agreed with our recommendation -- and subsequently sent a letter to the City of Flint on 8/17.

Yes we recommended that they require corrosion control and MDEQ agreed with our recommendation and subsequently sent the letter on 8/17.

I'll defer to Tinka. But it may be better to simply reference MDEQ's 8/17/15 letter to Flint -- and have the reporter obtain it from either the State or the City (unless EPA is cc'd on the letter?) ... I don't have it myself so we'd need to get from Water Division if we are going to attach it.

Should we say: "Yes -- and as a result of those discussions MDEQ sent the attached letter to the City of Flint." OR "Yes -- and MDEQ subsequently sent the attached letter to the City of Flint." (and then attach the 8/17/15 letter)

Peter:

Thanks for sending. I know this is sensitive topic but I have to ask a follow up question.
In those July discussion, did EPA recommend, request, demand that additional corrosion control measures be taken?
As you know, there's a lot of discussion about what happened here and we're trying to understand what was communicated, in what form, at what time.
I'm trying to wrap this up today, so I'd need an answer this afternoon.
Again, thanks.
John

The below statement is from the EPA. You may attribute this statement only to an EPA spokesperson or EPA.

"EPA did not transmit the draft report to anyone on the cc list. EPA discussed the issues raised in the report with MDEQ in July."

Thanks. Let me know if you have any other questions.

DRAFT Letter to MDEQ Re Flint and LCR Implementation v9-30-15 mdt.doc
DRAFT Letter to R5 States Regarding LCR OCCT Requirements v9-30-15 mdt.docx

Hi Tom,

Here are the latest articles out of Flint. Of particular note is the sentiment from residents regarding the trustworthiness of statements made by State and local elected officials in the first link below starting at 3:33. I am stressing this particular section of the podcast because one of the statements that DEQ keeps making is that according to the EPA rules the LCR requires two rounds of testing and if the results are over 5 ppb, they have to put in treatment. This is a misleading statement and I want to make sure that what we send is not inadvertently providing support for those types of statements. It should be unambiguously clear what the requirements were then and are now.

As I explained in the material that has been sent to OGWDW, that criteria only applied way back in 1991 when the requirements first kicked in. Flint did not meet the 5 ppb criteria back then and the city was required to complete the installation of treatment by January 1, 1997. At that point, that criteria is no longer applicable. The requirements that became applicable to Flint after the installation of treatment (i.e., starting in 1998) were:

- Flint must continue to operate and maintain the treatment;
- MDEQ must designate optimal water quality parameters; and
- Flint must operate in compliance with the state-designated OWQPs.

Since DEQ keeps making incorrect statements on this point, I recommend that we make some changes to the letters we are sending to MDEQ and the R5 States to clarify the timeline (see attached).

Flint: The Cheapskate City That Poisoned Its Children (Newsweek)

http://www.newsweek.com/flint-cheapskate-city-poisoned-its-children-381717

BY ROBERT D. MORRIS 10/12/15 AT 5:46 PM

In the winter of 2014, the city of Flint, Michigan, decided to change its water source to the Flint River. Almost two years later, Flint has discovered that, by saving money, its was poisoning the city"s children. EDUARDO MUNOZ/REUTERS

FILED UNDER: Opinion, Water, Michigan

The city of Flint, Michigan, has just learned a hard and tragic lesson about the value of clean water.

In the winter of 2014, after years of escalating prices for the water it was purchasing from the Detroit drinking water system, Flint decided to change its water source to the Flint River.

It made this decision despite the fact that the Michigan Department of Environmental Quality had classified the Flint River source water intake as having “a very high susceptibility to potential contaminant sources”, its worst rating.

Try Newsweek for only $1.25 per week

Almost two years later, Flint has discovered that, by saving money, it was poisoning the city"s children.

The roots of this crisis are as old as plumbing itself. Over 2,000 years ago, the*plumberii* (literally, lead workers) of the Roman Empire began to lay pipes of lead to carry water because this soft metal doesn"t rust and is easy to work.

Until 1986 when it was finally banned, lead pipes and lead solder could be found routinely in every major city in the United States connecting homes to drinking water mains, particularly in older cities, such as Flint.

The problem begins when corrosive water enters these pipes and dissolves the lead. One of the most important contributors to this corrosion is simple salt and, every winter, immense quantities of salt are spread on the Michigan roads, some of which finds its way into the Flint River.

After switching to the Flint River for its drinking water, the city tested for lead, taking over a hundred samples throughout the city. Oddly, it chose to test only in the summer and fall, not a time of year likely to reveal the impact of road salt.

These tests did not show elevations in lead levels in water. Subsequent tests have found lead in drinking water at up to six times the allowable levels.

When lead enters children''s bodies, it poisons their brains, bones and kidneys. Unlike road salt, lead and its effects do not go away in the summer.

As a result, the city ultimately used its children''s blood to test for lead in their drinking water. When recent tests revealed a doubling in the number of children with dangerous levels of lead in their blood, the city finally stopped using the Flint River.

According to a model developed by the world''s top lead researchers in 2005, the observed rise in lead levels would, on average, shave a point off the IQ of every child in Flint. The lifetime loss of income alone for the approximately 25,000 children living in Flint would be roughly half a billion dollars. This number does not account for neurologic disorders, adult hypertension, heart disease, stroke, kidney malfunction, elevated blood pressure and osteoporosis—all of which are also associated with lead.

As a society, we have forgotten what it means not to have clean water. Nothing is more essential to life and nothing is more undervalued in a modern society. As Flint struggles to deal with the nightmare of a city with no access to clean water, as its people scramble to find bottled water and to install filters in their homes to remove the lead, it is relearning this painful and costly lesson.

Like Flint, cities around the world, faced with growing populations, contaminated watersheds and water supplies made increasingly unpredictable by climate change, are searching for new sources of drinking water.

They would all be wise to study the disaster unfolding in Flint.

Robert D. Morris is an environmental epidemiologist and the senior medical adviser to the Environmental Health Trust and a leading researcher in the field of drinking water and health. He has taught at Tufts University School of Medicine, Harvard University School of Public Health and the Medical College of Wisconsin and has served as an adviser to the Environmental Protection Agency, Centers for Disease Control and Prevention, National Institutes of Health and the President's Cancer Panel. He is also the author of the book, The Blue Death *(HarperCollins), that depicts natural and man-made hazards present in the water we drink.*

Michael Moore

FLINT, MI -- Filmmaker Michael Moore hasn't said much about Flint's water crisis but he made it clear where he thinks the blames lies in a **Twitter message** Sunday, Oct. 11.

"Republican governor took over the city and then made its citizens drink their own sewage from the Flint River ..., " Moore said in his tweet.

The Flint native posted his message in response to a **Detroit News story** about Flint's problem drinking water. The story quotes a Flint resident as saying her water looked "like urine," smelled "like the sewer."

Last week, Gov. Rick Snyder announced a plan to reconnect Flint to the Detroit water system after testing by Virginia Tech university showed a serious problem with lead in water here.

A Hurley Medical Center doctor's study also showed rising levels of lead in the blood of children and infants since the city began using the Flint River as its water source in April 2014.

Flint was run by a series of state-appointed emergency managers as key decisions were made to end the use of Lake Huron water, purchased from the Detroit water system, and to use the Flint River instead.

Flint City Council OKs $2 million for reconnection to Detroit water (MLive)

http://www.mlive.com/news/flint/index.ssf/2015/10/flint_city_co

By Ron Fonger | rfonger1@mlive.com
on October 12, 2015 at 8:23 PM, updated October 13, 2015 at 10:46 AM

FLINT, MI -- The City Council has approved spending $2 million to pay part of the **bill for buying Lake Huron water** from the Detroit water system for the next nine months.

Council voted unanimously Monday, Oct. 12, to make the move, clearing the way for Flint's Receivership Transition Advisory Board to consider the same move when it meets Wednesday, Oct. 14.

The $2 million is the city's part of a $12 million spending plan for returning Flint to Detroit Water and Sewerage Department water and ending the use of the Flint River as a drinking water source.

Flint is in the midst of a public health emergency because of elevated levels of lead in water and lead in the blood of infants and children.

Researchers from Virginia Tech university have said the high level of corrosivity of Flint River water, which the city began to use in April 2014, has caused lead pipes and lead solder to leach into tap water here.

The council's action comes in the week following **Gov. Rick Snyder's announcement** of the shared-responsibility plan for financing the reconnection of Flint to the Detroit Water and Sewerage Department.

Ninth Ward Councilman Scott Kincaid voted for the deal after his unsuccessful attempt to change it to force the state to pay more.

Sixth Ward Councilman Herbert Winfrey was not at the meeting.

Kincaid said the state should pay more because Flint was under the control of a state-appointed emergency manager when the decision was made to use the Flint River.

"I think we ought to hold the governor's feet to the fire ... for what the governor has put this community through," Kincaid said. "We're going to have water turned on from DWSD whether (the city approves) the contract or not.

"I guarantee the governor will step in if (we don't) negotiate a contract. If you can't," he told City Administrator Natasha Henderson, "someone out of his office will."

Mayor Dayne Walling and other council members said the state should pay more, but said the city shouldn't gamble with an arrangement that assures an end to the use of the river.

"After months of protesting ... I don't want nobody grandstanding ... We don't want no wrench in this," said Councilman Eric Mays. "It was like pulling hen's teeth to get here."

The DWSD water, pre-treated and from Lake Huron, is expected to be paid for with $6 million coming from the state, a $4 million grant from the Charles Stewart Mott Foundation and $2 million from the city.

Snyder's announcement of the plan came after a **recommendation** by Flint's Technical Advisory Committee on Oct. 8 to change the city's drinking water source and the declaration of a public health emergency last week because of **rising levels of lead** in both water and the blood of children and infants here.

Henderson said earlier Monday that she expected council to support spending $2 million from the available fund balance in the city's water and sewer funds.

"I do not see we will have any obstacles at all with the council," she said in advance of the meeting.

Henderson said she expects the conversion to DWSD water to take place within **two weeks**, and Department of Public Works Director Howard Croft said Flint River water should be flushed out of the drinking water transmission system within three weeks.

Flint resident Claire McClinton, a representative of the Democracy Defense League, said the recent moves to get the city to end its use of the river came later than they should have.

"You told us the water was safe ... A year ago, **General Motors** said this Flint River water is rusting our parts ... You didn't tell GM the water was safe," McClinton said.

"It didn't have to (drag on) this long. You could have made this happen sooner," she said.

"No community, rich or poor, urban or suburban, black, brown, red, white, or yellow should be allowed to become an environmental sacrifice zone." ~ Dr. Robert Bullard

God Help Us Save Flint
(image by media.photobucket.com/user/onthamash/media/image-4229483-2.jpg.html?filters[term]=god help us save flint&filters[primary]=images) DMCA

For the past 18 months, Flint residents have complained about the quality of their water and suspected health effects. They complained of hair loss, skin rashes, and even vomiting after drinking the water. Although their concerns were mainly disregarded by state and city officials, a study by researchers at Flint's Hurley Medical Center substantiated their escalating fears and gave their plight national attention. This study along with water analysis by a Virginia Tech professor, and a petition to the U.S. Environmental Protection Agency (EPA), provided empirical evidence of rising child blood lead levels and revealed overlooked records of high lead levels in the City's drinking water.

A wealth of research shows that even a small amount of lead in a child's body can cause serious health problems. Studies have demonstrated lead's compromising effects on the immune system and association with impairments in neurobehavioral factors such as a child's learning skills, hearing, and self-regulatory ability resulting in delinquent behavior.

According to the filed petition, Flint's drinking water also tested positive for total coliform, an indicator of possible sewage and fecal contamination. It is further noted that the City's treatment of the water to address the coliform resulted in elevated levels of total trihalomethanes (TTHM), a byproduct of disinfection associated with liver, kidney, central nervous system problems, and increased risk of cancer.

The assertions contained within the petition tell of Flint's water issues beginning after residents were moved from their water source of over fifty years, Detroit Water and Sewerage Department, to an inadequately examined water source and delivery system from the Flint River. This decision was at the helm of numerous and differing emergency managers, appointed by Governor Rick Snyder to fix Flint's budget problems, and done so while neighboring areas remained on the treated and safe water source.

The "budget fix" tactics that have forced Flint's young children to drink lead-laced water can contribute to their lower academic performance. Academic performance is a primary measure used to initiate "state school districts" or state takeover of MI schools. Additionally, recent news reports state that parents are pulling their children from Flint Public Schools at a loss of 300 more students than initially projected. This decline in enrollment would lead to a loss in school revenue and a greater budget deficit making it easier for a state takeover of Flint Public Schools.

- Advertisement -

While Flint's poisonous water has shed light on callous decisions that continue to risk the health and well-being of our most vulnerable Michigan citizens, other low-income children are also casualties of such policies. After more than six years of a failed state-takeover style of governance, Detroit Public Schools' finances and academic outcomes have worsened, with a destabilized education system, decreased academic outcomes, and increased deficit, upward of $335 million.

Governor Snyder, through executive orders and proposed legislation, continues an attempt to extend policies and an autocratic form of governance that usurps local control and power from Michigan residents. This is a formula for the making of a U.S. sacrifice zone, where costs are cut, budgets are balanced, and profits are made at the expense of the health and well being of our children, especially our children living in low-income families.

Accountability needed in Flint water crisis (Detroit Free Press Op-ed)

http://www.freep.com/story/opinion/readers/2015/10/09/feedback-flint-water/73677984/

Gov. Rick Snyder announced plans Thursday to reconnect Flint to Detroit's water system, two weeks after a researcher in the area revealed that more children in Flint have elevated levels of lead in their blood.Flint switched its water source in 2014 from Detroit's system to Flint River water through its own treatment system, which had, at best, nominal controls to keep lead from Flint's aging infrastructure from leaching into the water. Here's what readers had to say about Flint's water crisis:

I can't believe the level of incompetence in handling this by Gov. Rick Snyder and the Michigan Department of Environmental Quality. Complaints started well over a year ago and Gov. Snyder is just now finally reacting? Instead of blanket denials by everybody involved, maybe someone should have done some investigating before it got to this point. Any action taken now cannot reverse the damage already caused to the residents affected by this tragedy. Maybe Snyder should do some research and look up the events of the PBB disaster that occurred in the 1970s under then Gov. Milliken's watch. Do we never learn from our previous mistakes?

Chuck Macioce

Eastpointe

In response to the EPA mandate and under the scrutiny of MDEQ, DWSD studied the problem of corrosion and field-tested processes for their effectiveness for over a year before coming up with its solution of treatment with phosphoric acid which causes a phosphate coating to build up on the pipes blocking the water from leaching lead and copper. All reports were submitted to MDEQ for their approval and files. The similarities between Flint and Detroit couldn't be more obvious, so why would MDEQ approve recommissioning the antiquated Flint treatment plant when it lacks the processes it mandated at DWSD? The problem is what's not in the water leaving the Flint plant that allows it to leach lead out of the old pipes through which it flows. Snyder is locking the barn temporarily sending them back to DWSD, but the horse is gone and can't come back. Where is the accountability for the irreversible harm done to the children of Flint?

Dennis L. Green

DWSD Head Water Systems Engineer (Retired)

This is a reminder that it is important to elect people who are good managers with a mind-set for long-term planning. Why does the City of Flint have no money despite nearly a century of prosperity? Does no one realize the pipes and plants will eventually need to be replaced?

Esteban Curtis

Via Freep.com

This is exactly why government *cannot* be run just like a business with the bottom line being most important. Sometimes decisions have to be made that are not in the best interest of the bottom line. Sometimes people's health and safety are more important than money. We won't even know the cost and damage this caused and at the moment is still causing. This is completely unjust and children's minds and bodies are forever damaged.

Jonathan Ziebol

Via Freep.com

This situation is so sad on so many levels. Even very low levels of lead in children and pregnant women can cause substantial problems with learning and other intellectual functions. As children fail to learn, they act out in frustration. This sometimes leads to criminal behavior that we, as a society, blame on the individual or the parents. In this case, nothing could be further from the truth. Our leaders from both major parties need to balance short-term savings with long-term benefits/risks and understand how lead in children's drinking water leads to criminal behavior down the line. All the criminal justice reform the state can muster can not undo the damage caused by poisoning these children.

Robert Kahle

Chemical testing could have predicted Flint's water crisis (Detroit Free Press)

http://www.freep.com/story/news/local/michigan/2015/10/10/missed-opportunities-flint-water-crisis/73688428/

Chemical tests could have predicted the corrosion in the pipes that is now being blamed for endangering the health of thousands of vulnerable Flint residents by elevating lead levels in their water supply, experts say.

As the city scrambles to reconnect to the Detroit water system, the absence of such testing on the Flint River water is one of many missed opportunities that might have lessened or avoided the crisis, they say.

“Any competent person should have seen this water will eat up iron and eat up lead,” Marc Edwards, a Virginia Tech professor and national expert on pipe corrosion, told the Free Press. Edwards said his own research shows that Flint River water, without additional controls, corrodes the lead inside pipes at 19 times the rate of water piped from Detroit.

Why are lead levels in children higher in 2 Flint ZIP codes?

Among red flags that popped up over the last 18 months:

- General Motors announced in October 2014 that it was pulling its engine plant off Flint water after workers there began noticing rust spots on newly machined parts. The city approved letting GM switch to water from Flint Township, but didn't change its own water treatment procedures.

- The University of Michigan-Flint alerted city officials that it found elevated lead levels in its water in January, prompting the school to shut off some some drinking fountains and add water filters to others.

- Testing in the fall of 2014 found E. coli in the city's water system, prompting "boil water" notices. The city's procedures for killing the E. coli produced chemical by-products known as trihalomethanes, which can cause cancer with long-term exposure. The city had to adopt additional measures to reduce them.

“Common sense tells you that the Flint River is not your first choice of drinking water,” said Shawn McElmurry, who teaches civil and environmental engineering at Wayne State University and has followed Flint closely.

Q & A on Flint's water troubles

Experts say the testing could have been done before the switch from the Detroit system. But officials from the Michigan Department of Environmental Quality note that that kind of testing isn’t required under federal drinking-water rules and has never been done in Michigan. What’s more, they said, the Flint River water, treated in the city’s plant, was already approved as a backup supply in case of interrupted service from Detroit.

Other experts said the testing is more nuanced, part art and part science. Still, they acknowledge that by examining things such as the acidity of water and other factors, engineers could have estimated how much corrosion to expect once water from the Flint River was pumped into homes and businesses across the city.

“Not every engineer in our field could do it, it's a pretty specialized area," said David Cornwell, a Virginia-based engineering consultant and a technical adviser to the National Drinking Water Advisory Council, a group of experts that works with the Environmental Protection Agency on drinking water issues.

Flint doctor makes state see light about lead in water

The fix now will cost $12 million — a combination of money from the state, the city and the Flint-based non-profit C.S. Mott Foundation, which has pledged $4 million to help pay Detroit for the water while Flint waits to connect to a new water authority in partnership with Genesee County.

Water woes began shortly after switch from Detroit

Flint began using Flint River water as its main supply in April 2014. Before that, it bought Lake Huron water that was treated and delivered by the Detroit Water and Sewerage Department. Detroit ended that deal one day after Flint voted to join Genesee County in forming the Karegnondi Water Authority, which plans to build its own Lake Huron intake and pipe the water to the Flint Water Plant.

Flint officials wanted to remain on Detroit's system, but the two sides couldn't agree on a price and a contract length.

Once the switch to river water was made, the city, which was operating under a state-appointed emergency financial manager, faced one problem after another. Residents packed city council meetings and held protest marches to voice their anger about water quality.

Experts say Flint's lead problems could have been held in check if the city had added phosphates to the water, as Detroit has done for years. The treatment doesn't eliminate lead entirely, but it does form a film over the pipes themselves, effectively sealing in the lead and reducing the amount in the water to acceptable levels.

But when Flint switched to river water, it didn't add phosphates. Instead it added lime to soften the water.

“The lime softening process has the added benefit of some corrosion control,” said Liane Smith, chief of Michigan’s Office of Drinking Water and Municipal Assistance.

Smith said that once the switch was made, the state began testing for lead and copper, as is required by the federal Environmental Protection Agency.

“Any new supply that comes along has to do two six-month rounds of monitoring for lead and copper out in their distribution system,” Smith said. If those tests show corrosion, additional steps, such as perhaps adding phosphates, are supposed to be followed.

The first round of testing completed in December 2014 showed lead levels of 6 parts per billion. The second round, completed in June of this year, showed they had almost doubled to 11 parts per billion. The EPA requires a remediation plan when levels reach 15 parts per billion and can demand action even below that mark on systems that serve more than 50,000 people.

Cornwell said phosphates are considered more effective than lime softening and they don't raise treatment costs substantially. But they have side effects, he said.

“The negative is that nobody really likes phosphates out in the environment,” he said, noting they can find their way into rivers and lakes, fueling algae blooms such as the ones in Lake Erie.

“There is more to it than saying we're just going to pump phosphates,” Cornwell said. “You may have to make other adjustments.”

Flint River water a challenge to clean up

Flint River water was always going to pose more treatment challenges than the cold, clear water that comes from the bottom of Lake Huron, experts said.

The river has been marked by decades of industrial pollution. Its tributaries channel farmland run-off into it and its temperature varies by season. Warmer water can promote bacteria growth. All of those factors make treating it to drinking-water standards more difficult.

"The city was doing the best it could” to clean up pollutants, Edwards said, but added that corrosivity was inevitable.

He blamed the problems on a lack of expertise rather than intentional wrongdoing.

“I think it started relatively innocently. They didn’t understand testing and they didn’t understand corrosivity,” he said.

Last month, Edwards' research group released results of corrosion tests it conducted on Flint's water. For the test, researchers used copper pipe with lead solder, which is common in older homes.

The tests showed Flint River water without added phosphates corroded the lead at 19 times the rate of Detroit water. Even when phosphates were added, it corroded at 16 times the rate of the Detroit water.

“From the second it was switched, it was doomed from the lead problem," Edwards said.

When residents began complaining about the water, the city and state should have begun to rethink their testing, Edwards said.

Problems were evident soon after the switch.

In August last year, E. coli was found in the water and residents were urged to boil it before drinking it. The city treated it with disinfectant, but that produced by-products in the water known as trihalomethanes. Long-term exposure to them can cause cancer, so the city began making treatment adjustments.

Then as summer turned to fall, workers at Flint’s GM engine plant began seeing rust on newly machined engine parts. GM's lab tests found high levels of chloride in the water used to wash down metal shavings and cool parts heated from the rapid machining action inside the plant, GM spokesman Tom Wickham said.

GM tried to treat the water in the plant. It had drinking water delivered and tankers brought water for operations, Wickham said.

But it eventually sought to connect to Flint Township's water system, which is supplied by Detroit. In December the connection was finalized and Detroit water began flowing to the plant, via Flint Township.

In January 2015, lead was showing up at the University of Michigan's Flint campus. School leaders become concerned about the water supply after the city issued "boil water" advisories to kill E. coli and realized they'd never done routine, thorough water testing.

Tests in January and February showed elevated levels of lead and other problems in isolated areas — specifically in two infrequently used drinking fountains in two older buildings.

Follow-up testing found other elevated levels of lead, and those sinks and fountains then were either fitted with filters or removed, said Mike Lane, director of the environment, health and safety department

He said officials suspected the problem was in their pipes but notified the city anyway.

In June, Miguel Del Toral of the Environmental Protection Agency drafted an internal memo noting the problems Flint had experienced with E. coli and the by-products of the chemicals used to treat it.

"A major concern from a public health standpoint is lack of corrosion control treatment in the city of Flint for mitigating lead and copper levels in the drinking water," Del Toral wrote.

The memo caused a stir when the American Civil Liberties Union exposed it. But the EPA told the Free Press on Friday that the memo was a draft that was never delivered to MDEQ officials, including Smith, whose names appear on it.

The EPA did say it discussed the concerns raised in the memo with MDEQ officials in July, but the agency did not respond immediately to a request for details.

Leaching lead not unique to Flint

The problem of lead leaching into drinking water isn't unique to Flint. Across Michigan and around the country, pipes that carry water from the mains under the street into homes, businesses and schools often contain lead. Inside homes and business, many older plumbing fixtures and soldered pipes also contain it.

Cornwell said officials from across the nation have formed a working group to review the lead and copper rules and look for ways to improve them. Among the things being considered is a national effort to remove lead pipes from water systems.

But even if a national consensus formed around that idea, the process would take years, Cornwell said. A funding source for such a massive project also would be needed.

Still, he said, removing the pipes is the only surefire way to eliminate lead from the system.

"We can only do so much with water chemistry," he said. "We can only turn the knob so much."

Here's a glance at Flint's water crisis:

QUESTION: Why is Flint experiencing lead in its drinking water?

ANSWER: Experts say the chemistry of the water drawn from the Flint River is interacting with metal in the pipes leading to homes and businesses, leaching lead into the system.

DETROIT FREE PRESS

Chemical testing could have predicted Flint's water crisis

Q: Is all water in Flint unsafe?

A: Yes. Experts recommend all Flint residents install water filters to protect themselves from lead exposure. Free filters are being made available throughout the city.

-

DETROIT FREE PRESS

Why are lead levels in children higher in 2 Flint ZIP codes?

Q. What led to Flint's decision this past week to seek to reconnect to Detroit's water system?

A. An analysis by Dr. Mona Hanna-Attisha, a pediatrician at Hurley Children's Hospital, found that the number of Flint children with elevated blood-lead levels — 5 micrograms per deciliter or more — jumped from 2.1% in the 20 months prior to Sept. 15, 2013, to 4.0% between Jan. 1 and Sept. 15 this year. In certain ZIP codes, the change was even more severe — jumping from 2.5% of the children tested to 6.3%. Flint started drawing water from the Flint River last year. Hanna-Attisha's research prompted state health officials to look more closely at their own data.

Q: Why is Flint using the river water?

A: In 2013, the city voted to join the Karegnondi Water Authority, a new group that is building an intake from Lake Huron and a pipeline to Flint. That does not become operational until the middle of next year. Meantime, Flint's former supplier, the Detroit Water and Sewerage Department, terminated its contract with the city after the vote and discontinued providing water one year later.

Flint doctor makes state see light about lead in water

Q: Why did Detroit end its contract with Flint?

A: The two cities couldn't agree on terms of a contract to keep Flint on the system so Detroit exercised an option in their 1965 contract to terminate service with one year notice.

Under the steady gaze of a watercolor giraffe and tissue paper butterflies, a Flint pediatrician and mother of two last month forced the state of Michigan to snap to attention.

But getting the state to concede the probability that Flint's water is poisoning its children with lead — after months of assurances from both city and state officials that the water is safe — was far from easy.

It required Dr. Mona Hanna-Attisha, 38, to sidestep bureaucracy. It meant awkward conversations and putting her hospital — city-owned Hurley Medical Center — smack-dab in a political minefield.

And it meant checking her data "a zillion times," she said, then second-guessing herself to the point of being physically ill when a state spokesman questioned her credibility.

Just hours after state officials acknowledged her data, Hanna-Attisha felt equal parts exhausted and vindicated — at one moment laughing at congratulatory e-mails and comments from colleagues ("Maybe they'll give you a lead key to the city," one had quipped), at another reciting sobering statistics about the life-long damage from lead poisoning: irreversible brain damage, development delays, speech problems, a boosted risk for behavioral issues, serious chronic conditions, to name a few.

Q & A on Flint's water troubles

"It has been such a physiologic response," she said of her look at the numbers and the state's reaction. She sat in her office, where children's artwork hangs haphazardly on the walls. A pink-lettered sign on her door — "This is my fight song," it reads —pays homage to Hurley's youngest cancer patients.

"At times I want to cry and then I'm so happy," she said.

But then Hanna-Attisha, a pediatrician for many of Flint's poorest families whose training and experience has focused on environmental toxins and health disparities, shook her head.

Why are lead levels in children higher in 2 Flint ZIP codes?

“But then I’m tearful because how could this have happened in 2015 when all these regulations are in place (to ensure clean water)? For a population that has every burden in the world already, this is the last thing they needed,” she said.

In retrospect, Hanna-Attisha served as the canary in the coal mine in this latest public health crisis — the doctor who spotted a problem and wouldn’t let it go until others paid attention, said Dr. Eden Wells, the state’s chief medical executive.

-

DETROIT FREE PRESS

Chemical testing could have predicted Flint's water crisis

“She was a doc on the front lines who knows to pick up the phone ... rattle some cages and say ‘Hey, come here, we’ve got a problem,’ ” Wells said.

It began over a dinner party with high school friends Aug. 26.

Among Hanna-Attisha’s guests was a friend who played piano at her wedding and also is a water-quality expert. The conversation turned to the issue of the drinking water.

“Have you looked at kids’ blood-lead levels?” the friend asked.

Hanna-Attisha was not only intrigued, but also perfectly positioned for such a data dive.

She heads the pediatric residents program at Hurley and is a pediatrics and human development professor at the Michigan State University College of Human Medicine. She sits on the Michigan Chapter of the American Academy of Pediatrics, too.

Buy Photo

In short, she lives as much on the research side of medicine as she does the clinical side.

So she knew that routinely drawn blood-lead level data existed for thousands of Flint-area children, especially those on Medicaid or who live in high-risk areas for lead exposure. The following week, she turned to the Genesee County Health Department for its blood-lead level data.

She was disappointed. Test results are kept in individual patient files and could not be easily analyzed, Genesee County health officer Mark Valacak told Hanna-Attisha.

Undaunted, she asked the state for its analysis of the same blood-level data for Flint.

In the meantime, local and state officials were facing mounting pressure from residents who had already complained that the water smelled and tasted funny.

In mid-September, a Virginia Tech researcher and lead expert, Marc Edwards, concluded from his testing of Flint water that it was 19 times more corrosive than Detroit water. And even though repeated testing at Flint's water treatment plant had detected no lead and testing in homes had registered lead at acceptable levels, according to the state, Edwards wrote on his website, www.flintwaterstudy.org, that his own test results suggested an undeniable presence of lead in water drawn from Flint homes.

While she waited for state data, Hanna-Attisha began sorting through Hurley's own records — a total of 1,746 test results from Flint children to compare against 1,640 results from elsewhere in Genesee County. The results were sobering: The number of Flint children with elevated blood-lead levels — 5 micrograms per deciliter or more — jumped from 2.1% in the 20 months prior to Sept. 15, 2013, to 4% between Jan. 1 and Sept. 15 this year. In certain ZIP codes, the change was even more troubling, she said — jumping from 2.5% of the children tested to 6.3%.

The change correlated roughly to the timing of the city's switch from using Detroit water to water that would be temporarily drawn from the Flint River.

She and her research assistant kept rechecking the numbers — often late into the evening.

One night, "her baby is crying and I'm like 'Can you run that p-value one more time?' " she said, chuckling.

By the time Hanna-Attisha went to Hurley's CEO, Melany Gavulic, public panic was high. Community organizations were handing out filters and bottled water. Community leaders blamed a state-appointed emergency manager for changing water systems. It's an election year, too, for the city.

It was a "politically messy situation," Hanna-Attisha told her boss. Gavulic was clear, Hanna-Attisha said: Kids' health comes first.

On Sept. 24, Hanna-Attisha went public with her results.

The response from the state, she said, was startling. Her research was dismissed and her comments called "unfortunate."

Brad Wurfel, spokesman for the Michigan Department of Environmental Quality, repeated a familiar refrain: Repeated testing indicated the water tested within acceptable levels.

Hanna-Attisha said she crawled into bed that night, physically ill.

“We checked our data a bazillion times ... but when you hear (the state’s dismissal) on national news, how can you not doubt yourself?” she said.

She wasn’t the only one surprised. Valacak, the Genesee County health executive, said he “took offense ... in part because I know how dedicated she is and I know the quality of her character.”

That Monday, Valacak e-mailed state health officials. Among his questions: Why would the state’s analysis include non-Flint residents? On Tuesday, he pushed again for an answer. On Wednesday: “Any update?”

He got no answers, he said: “It was frustrating.”

At the same time, Hanna-Attisha had stepped up conversations with Wells, who had taken her post as the state’s chief medical executive in May. The two women knew of each other and had even stood together earlier this year to promote immunizations.

Wells, who leads the preventive medicine residency program at the University of Michigan’s School of Public Health, said she’d heard media reports about Flint’s water. She balanced those against water-quality tests indicating the water was safe. Moreover, a look at county-wide data didn’t trigger any alarms.

Now, she was alarmed by a closer look at Hanna-Attisha’s findings.

In several conversations, Wells and Hanna-Attisha compared the pediatrician’s analysis against that of the state epidemiologists. Among the differences: The state’s number included kids from outside Flint — those who wouldn’t normally drink Flint water. Some had Flint addresses but lived outside city limits.

As September drew to a close, state health epidemiologists reanalyzed their data, eventually confirming Hanna-Attisha’s results.

Wells saw a yellow Post-it note from her staff on her keyboard when she walked in at 7:30 a.m. Oct. 1. Her own data analysts had confirmed Hanna-Attisha’s findings. She walked down the hallway to find Nick Lyon, director of the Michigan Department of Health and Human Services. They’d have to let the public know — and fast, the two decided.

That same day, Valacak and Genesee County commissioners declared a public health emergency. Commission Chairman Jamie Curtis said he’d simply had enough. Hanna-Attisha’s data couldn’t be ignored, no matter what state authorities said water testing indicated.

“In six years I don’t want 5- and 6-year-olds going to school with lead poisoning,” he said.

Valacak said he got a call the next day — Friday, shortly before the state news conference. Hanna-Attisha’s numbers had been confirmed, he was told.

At 1:30 p.m. Oct. 2, Flint Mayor Dayne Walling joined state officials — environmental, health and public relations — at the microphone in front of a packed room of reporters.

“We understand many have lost confidence in the drinking water. We need to build that back. We need to do that more,” Dan Wyant, of the Michigan Department of Environmental Quality, said in front of a line of cameras. Reporters tapped away on keyboards. Outside were protesters.

Quietly in the back of the room stood Hanna-Attisha. She leaned over to Brad Wurfel, the state spokesman who a week earlier had called her work “unfortunate” in a time of “near hysteria.”

“You called me irresponsible,” Hanna-Attisha recalled saying to him. Wurfel said he was sorry.

“I had the opportunity to apologize ... I was grateful for the opportunity to do it,” Wurfel told the Free Press later. “I will be the first to say, I came on a little strong on this because I believed the numbers we had in the moment.”

Hanna-Attisha, whom Gavulic called “definitely one of our superstars” even before her recent spotlight, said she and other researchers aren’t done. They want to specifically map blood-lead levels throughout the city’s neighborhoods, and they want to test for blood levels in cord blood from Flint’s newest babies.

Exhausting? Yes. Ready to stop? Never, she said: “Because this is what matters. This is what we do ... This is why we’re here.”

All Stories

FLINT, MI -- Life has mostly returned to normal nearly two years after a disastrous chemical spill thrust Charleston, W.V., into the national spotlight.

Leaders of the small town nestled in the Appalachian Mountains say the same will eventually be true of Flint as it heals from a water crisis that was reported nationwide -- as long as leaders and residents face the truth of their problem.

National news trucks descended on the West Virginia capital in January 2014 after a storage tank at a nearby chemical plant began leaking multiple chemicals into the Elk River, nearly a mile upstream of the area's drinking water intake.

Soon, the entire area, roughly 300,000 people, was without safe drinking water.

"You just couldn't imagine how bad it was," Charleston Mayor Danny Jones said.

RELATED: How the Flint water crisis emerged

For days, residents were told not to drink, cook or bathe with the town's water as the little-known coal-washing agent was being sucked up into the region's water supply.

A fear that the city's water supply had been poisoned swept through the town.

Trucks of bottled water were brought in to sustain the residents. Restaurants and hotels -- a major segment of the region's economy -- shut down.

"It really cut the city at its knees," said Charleston Convention and Visitor Bureau President Alisa Bailey.

In Flint, a savior succumbs

In Flint, it was billed as the future; a salvation for a city reeling from the loss of residents and businesses. It was a chance to save money, which for a city facing staggering legacy costs and toiling through state receivership was too good to pass up.

But, unlike Charleston, Flint's calamity didn't start with nefarious dealings from an industrial polluter. It began with a push of a button and a celebration.

"Here's to Flint," Mayor Dayne Walling exclaimed in April 2014 as he, state-appointed emergency manager Darnell Earley and more than a dozen others drank glasses of freshly-treated Flint River water as the city cut ties from the Detroit municipal water supply.

Leaders at the time thought closing the valve to Detroit was actually opening the city's financial future, giving the Vehicle City's water budget a respite from increasing prices as they waited for a new pipeline to be built from Lake Huron.

But, in reality, they were unleashing what would become a public health emergency that would eventually shake people's trust in what flowed from its taps and who they elected to office.

Broken trust

Complaints poured in almost immediately after the change. Protests soon followed.

Residents said they were receiving discolored, stinking water that was causing them health problems. But city leaders continued to tell residents the water was safe.

"It's a quality, safe product," Walling said in June 2014. "I think people are wasting their precious money buying bottled water."

However, weeks before Walling's reassurance, the city discovered some portions of its water supply had high levels of trihalomethanes -- or TTHM -- a group of four chemicals that are formed as a byproduct of disinfecting water.

Prolonged exposure to the chemicals can cause liver, kidney or central nervous system problems and an increased risk of cancer.

City residents weren't notified of the chemical by the city until January 2015 -- when it officially violated the Safe Drinking Water Act and was required by law to tell water customers of the problem.

Officials again dragged their feet in warning residents about rising lead levels due to the more-corrosive river water.

Results from 100 water samples collected from Flint in 2014 showed increasing lead levels, with 10 percent of homes tested at 6 parts per billion of lead or more. They were the highest lead levels measured in Flint by the city in more than 20 years, the state data shows.

That testing was completed more than nine months ago, but because the levels did not meet the federal action limit of 15 ppb, 69 more tests were done in 2015, and lead levels continued to rise.

Michigan Department of Environmental Quality Director Dan Wyant said the state notified the city of the need to develop a lead action plan in August 2015, but the concerns about lead levels were never publicized as a potential public health threat until researchers from Virginia Tech pushed the issue.

Even then, state officials were dismissive of the Virginia Tech study and disputed a separate study conducted by a Hurley Medical Center doctor that showed some Flint children had elevated blood-lead levels since the switch.

The state's and city's tone changed as protests continued and data continued to reveal the full scope of the problem. Eventually, Flint Mayor Dayne Walling and Gov. Rick Snyder decided it was time to make a change. They announced Thursday, Oct. 8, that Flint would reconnect to Detroit water.

"Reconnecting to Detroit is the fastest way to deliver clean, safe water to Flint and stabilize the infrastructure system," Walling said in a prepared statement. "I appreciate the state, the Mott Foundation, Detroit, and the county's participation in a solution for Flint's water problems. The health and safety of Flint's families, children and seniors is my top priority and reconnecting to Detroit is a major step that the city could not take alone given budget constraints."

Melissa Mays, founder of water activist organization Water You Fighting For, said she understands that the city wasn't required to tell residents of the water problems until it officially violated water safety standards, but officials should have been more open in communicating with residents and addressing their concerns.

"They didn't have to legally, but morally they should have told people," Mays said. "I think they felt the citizens wouldn't be understanding, but when your health is at risk you have to tell the truth."

The truth

It was the truth that helped Charleston residents outlast the tragedy, its leaders said.

Charleston Mayor Danny Jones said there was never any public mistrust in his city's leadership as they worked to return safe drinking water to the region's residents.

The city was in front of the issue, telling residents what was happening and how it would be fixed. They didn't try to hide the problems, and its leaders left politics aside.

Jones, a Republican, joked that he even cried when MSNBC's Rachel Maddow, a liberal pundit, profiled the town's issues.

"The quality of water is not negotiable," Jones said.

It was the truth that also helped Charleston rebuild.

Charleston, a state capital, survives in part thanks to a strong tourism and hospitality industry. So, a possibly poisoned water supply could be an obvious setback to attracting outside vacationers and conferences.

"I think it hits you right in the gut at the time," said Charleston Convention and Visitor Bureau's Bailey. "We did experience an economic disruption at the time."

But, tourism officials didn't try to hide the issue. Instead, they addressed the issue head on, and told people of everything they were doing to rectify the problem.

The truth worked. The travelers returned and Bailey said the industry has shown continued revenue grow for the past eight months.

"You can't B.S. people about it," Bailey said. "All you can do is be honest."

While Gov. Rick Snyder has pushed a plan that would reconnect Flint to Detroit water until the completion of the new Lake Huron pipeline, there's still work to be done to bring the crisis to an end.

Flint still needs to finalize the $12 million reconnection to the Detroit system, and it's still unknown how much damage the more-corrosive river water did to the city's infrastructure. Testing still needs to be conducted to determine just how pervasive the lead problem has become.

But the decisions made over the last 18 months leave some skeptical that the problem will ever truly be fixed.

Flint resident John Hinton said he wouldn't be surprised if money set aside to fix the problem is eventually misused. It's a feeling shared by many Flint residents as they continue to receive the highest water bills in the county for a product they are nervous to use.

"I just don't think they've got their thinking together," Hinton observed. "They got to get their heads together and do the right thing."

Snyder's representatives said they are dedicated to finding a collaborative solution that protects the public's health and ensuring residents safe, accessible water.

"We're focused on helping address this challenging issue for the residents of Flint, partnering with the city and collaborating across local, state and federal levels to bring all resources and ideas to bear," said Snyder spokeswoman Sara Wurfel.

Mays said her group will also continue working toward a safe, viable drinking water solution for Flint. But, the powers in charge of the project will need to be honest and forthright to ensure continued public trust in the city's water supply and elected officials.

"I don't know what it will take to get the trust back except for 100 percent transparency," Mays said.

State under mounting scrutiny for Flint’s water crisis (Detroit News)

Lansing — Gov. Rick Snyder and his administration face mounting scrutiny for Flint’s drinking water crisis, which began when a state emergency manager switched the supply source to save money and has culminated with high lead levels in some children.

Flint’s switch back to a Detroit-area system after more than 17 months is vindication for residents and others who complained for months about the safety, smell, taste and appearance of water from the city’s river. The about-face — which came after the state corroborated outside findings of elevated lead levels in children despite initially doubting the results — raises questions about the state’s role.

What was supposed to be a cost-cutting move for a 99,000-resident city in financial crisis turned into a health emergency and could end up costing state government at least $10.6 million.

What galls those who helped expose the fiasco is not only the initial decision to pump corrosive, less stable Flint River water without adequate treatment, which let the water pick up lead from more than 15,000 aging pipes that connect water mains to houses. It also is the response since, both from city officials and state environmental regulators who assured the public the water was safe.

As far back as February, a Michigan Department of Environmental Quality water supervisor told the U.S. Environmental Protection Agency that Flint had an optimized corrosion control plan in place. But by April, an EPA official confirmed through another DEQ official that was untrue, according to emails obtained through a public records request by the American Civil Liberties Union.

The ACLU began investigating after residents continually raised concerns about the water.

Snyder endorsed a return to Detroit's system — which treats water from Lake Huron — and is asking lawmakers to help foot the extra cost until Flint joins the new Thumb-area Karegnondi Water Authority next year. He acted at the behest of a committee of water experts but said it also was clear the public had lost confidence in the water supply.

"The protocols were being followed as established by the U.S. EPA, in terms of the testing that needed to be done," the Republican governor said. "What apparently is true is there needed to be more work. … Those are kind of the learning experiences."

The state initially downplayed lead concerns, saying city-provided samples showed fewer than 10 percent had levels above the federal action level. In August, after a year of testing, it told Flint to start corrosion treatment, now a moot point given the impending change in water source.

"What we knew in the summer vs. what we know now is distinctly different," said DEQ spokesman Brad Wurfel. He said the agency did things "by the book" but is talking with the EPA and internally about whether "some editing needs to happen to the book."

There could be statewide, even national implications that extend beyond Flint.

For instance, the state instructs drinking water systems to collect samples by asking residents to flush the tap the night before. Miguel Del Toral, an EPA official, has raised concerns that while the practice is not specifically prohibited by federal rules designed to find "worst-case" conditions, it minimizes true lead levels and gives residents a false sense of security.

Separately, DEQ Director Dan Wyant said the state will proactively address potential lead in all schools' water, especially in older buildings, after screening showed elevated levels in three Flint schools.

Lead — a metal that can cause developmental delays and learning disabilities — is just the latest issue since Flint changed its water supply in April 2014.

There have been high levels of a disinfectant byproduct. Increased bacteria levels forced boil-water advisories.

ACLU of Michigan Executive Director Kary Moss said the Flint "disaster" stems from "short-sighted" budgetary decisions made by an emergency manager, which were defended by his successor. Those responsible must be held accountable, she said.

Flint was under state-run emergency management from 2011 through this past April, and a transition board still oversees budgets and contracts.

Critics have questions about how adequately Flint River water was studied before the move, why lead pipes were not protected from corrosion and if the water caused long-lasting damage to the city's already-decaying infrastructure.

Senate Minority Leader Jim Ananich, D-Flint, said mistakes were made.

"It's important to look back and say, 'How were these things missed? Who missed them? And what steps can be put in place to make sure they don't get missed in the future, in my community or anywhere else?'" he said.

Residents, ACLU ask EPA to Take Action on Flint Water (Dispatch Times)

http://www.dispatchtimes.com/residents-aclu-ask-epa-to-take-action-on-flint-water/126015/

BY NEWSMEDIAON **OCTOBER 11, 2015**

Officials have declared a public health emergency over the city of Flint's water after tests showed children with elevated levels of lead.

Highly corrosive water in the Flint River, the source of the City's drinking water, has been flowing through lead service lines in Flint's water system for more than a year.

Bob Mabbitt, 39, said distributing filters is a "Band-Aid" fix because "not everybody's going to get a filter who really needs one".

"There's a few misunderstanding that the water coming out of the *Flint*system has lead in it, the non-detect has been consistent since the time it switched over", said Dan Wyant, the director of the DEQ.

The governor didn't rule out possibly reconnecting Flint to Detroit's water system, saying it is an "active topic". "There is a real concern and issue (once water) ends up in people's homes", Snyder said.

State and city officials are expected to outline the next plans to deal with the city's water crisis as soon as tomorrow.

But others were skeptical of the decision.

By June a year ago, residents began to complain that their tap water was the wrong color, that it had a troubling odor and taste.

But residents did notice a change. Thus, delaying corrosion control treatment will only delay improving the water quality.

On Thursday, General Motors announced it also was donating $50,000 to a private and public community fund providing filters for at least 5,000 Flint residents.

The city's water is treated and the state says it meets federal safety guidelines, but tests have found that the water is too corrosive and is releasing lead from old plumbing in and near thousands of homes. That's when the city, in a dispute with Detroit, quit buying its water and instead signed on with a new system that will draw water from Lake Huron. Facebook pages have been forums for complaints and concerns… It urges those using the city's water to not consume it unless it's treated.

Filters will be distributed at the University of Michigan-Flint for Flint homes affected by high levels of lead in their water. After, that figure jumped to 4%.

Considering the serious effects that lead poisoning has on children in particular, the question is completely reasonable. "But that's, you know, the thing that has happened". One study of Flint children under age five found that the proportion of children living in Flint with elevated blood levels has doubled since the City changed its drinking water source.

While it may have killed the bacteria, it left the water with high levels of trihalomethane (TTHM), which is thought to increase the chances of developing cancer.

In September, Virginia Tech researchers released a report saying Flint's water was creating a health threat in old homes that have lead pipes or pipes fused with lead solder.

Individuals shouldnt notice any difference, said Steve Busch, Lansing and Jackson district supervisor in the DEQs office of drinking water and municipal assistance.

Flint officials say they know which homes have risky pipes but that the information is on about 45,000 index cards and hard to retrieve.

"As a father, I want every family and household in the city of Flint to be safe and secure", Mayor Dayne Walling said at a press conference to announce the advisory.

The discovery of heightened lead levels has ratcheted up the pressure on Snyder's administration this week, with many blaming the governor since the switch to river water was implemented under his appointed emergency manager.

Flint-based Coalition for Clean Water, the American Civil Liberties Union of Michigan, and the Natural Resources Defense Council joined the petition to trigger the EPA to launch a comprehensive federal response to the ongoing crisis.

Lawmaker's lawsuit claims Flint, state withheld documents on water safety (MLive)

Phil Phelps*Sarah Schuch | sschuch@mlive.com*

FLINT, MI — A Flint-area lawmaker says he is filing a lawsuit claiming the state and city of Flint refuse to hand over documents related to the city's water system switch to use the Flint River.

State Rep. Phil Phelps, D-Flushing, announced Monday, Oct. 12, that he is filing the lawsuit to force the city and state to turn over documents he sought under the state's Freedom of Information Act.

RELATED: How the Flint water crisis emerged

Phelps claims that on Sept. 4 he requested the city and state turn over all documents and emails regarding a permit and application the city was required to submit to the state's Department of Environmental Quality before it began using the Flint River as its source of drinking water.

Last month, the state and city both denied the request by claiming the documents did not exist, according to Phelps.

"It's an absolute shame that I have to file suit to force our government to comply with the law," Phelps said. "I was shocked at their response, because prior to receiving the denials, officials from both the city and state had told me that not only did documents exist, but they would be happy to share them with me."

Phelps pointed to quotations from city and state officials in March and April 2014 stories on MLive.com that referred to the permit application process.

"I want to know what these officials knew about the safety and quality of the river water before the switch was made. Judging by their response and recent actions, it almost seems they knew a lot more than they are letting on to," Phelps said. "Flint residents deserve better than this. They deserve to know the truth about the decisions that were made, and if I have to fight this in court to get the truth, so be it."

City and state officials could not be immediately reached for comment on the allegations.

Gov. Rick Snyder announced a plan Thursday, Oct. 8, that would seek Flint's return to the Detroit water system after high lead levels were discovered in some residents' water since the switch to the river. City and state officials **first learned of possible lead problems** in late 2014.

Subject: OCCT Designations for Detroit and Chicago Groups

Hi all,

Attached are the OCCT designations for the Chicago interconnected systems and the Detroit interconnected systems.I asked Andrea to pull the SDWIS data for these two groups of systems (thank you kindly, Andrea!)

All large consecutive systems in the Chicago interconnection are appropriately designated as "system deemed optimized without OCCT" with a reason code of WQP (meaning OWQPs have been designated for them). Chicago's OCCT designation is incorrect (system designated optimized without treatment) and should be updated. So what is the proper OCCT designation for Chicago? And thus for Detroit? The reason code is WQP, as stated above, right?

All of the large systems in the Detroit interconnection are also designated as "system deemed optimized without OCCT" but they all have a reason code of '(b)(3)'. DEQ has acknowledged that the Detroit reason code of '(b)(3) is incorrect. It should be WQP and they will fix that in the next update. For whatever reason, Flint does not have anything reported for either the designation code or reason code.

Yes. Detroit and Flint should have been designated as WQP by July 1998.

Subject: RE: no Flint schematic yet

Thank you, we did finally get one, as you know. But of course, changes were made and hopefully at some point they can update it. That's important because we'll need something like it for the post-Detroit Lake Huron water switch, again.

Studies should have been already underway to anticipate the treatment changes at the plant and doses/coagulants/filter media/disinfection/phosphate dose that will be needed when the new source is ready. Our research (which we've presented at many conferences) clearly shows that many, if not most, water systems adding phosphate chemicals for corrosion, have protection mechanisms on the lead pipe surfaces that are not simple Pb(II) orthophosphate minerals. Back in the late 80s when the LCR was developed, the theory (which is also behind the WQP idea) was that simple minerals were formed. But we know now that it's not the case in many, if not most, systems. So, doing studies to anticipate effective target pH, calcium, alkalinity, orthophosphate, etc. is about the only way to optimize the corrosion control. That's just the same idea as doing jar tests to figure out proper coagulation parameters, which nobody objects to. The corrosion tests are more complicated, more expensive, and take longer, to be sure, but to get the treatment right without exposing the public to full-scale experimentation on the real distribution systems, it is simply the best engineering practice.

I do appreciate your help in digging out the background information. I'm sure we'll have more questions as time goes on.

Mike

I think MI DEQ has been hit hard this week with public inquiries, congressional inquiries, etc., so I have not heard back from them today. Tomorrow is a press release with MI DEQ and EPA. I did send them an email just now to say if they have the schematic, they should email it to you directly Nonresponsive Discussion of Personal Matters / Ex. 6, so I'll continue to follow up with them.

Subject: Flint Task Force

This afternoon I spoke with Stan and the Administrator -- after her call with Rep. Kildee. She asked me to revise the Task Force description to give it more of a regional flavor -- to make it clear that the Task Force is not a bunch of EPA HQ folks swooping in from DC to take over. I thought that the easiest way to accomplish this might be to say that the Regional Administrator is appointing the Task Force and to remove one of the HQ people from the Task Force. Please take a look at the revised version below -- and let me know if you are OK with this approach and if I removed the right HQ person (my thinking was that a technical lead would be in the best position to provide technical assistance.)

FLINT SAFE DRINKING WATER TASK FORCE

US EPA is committed to working with our state and local partners to ensure a safe and reliable water supply for the residents of Flint, Michigan. To achieve this, the EPA Region 5 Administrator will establish a Task Force to provide the Agency's technical expertise through regular, but no less than weekly, conversations with designated officials* from MDEQ and the City of Flint to assist with developing and implementing a plan to secure water quality, including measures to optimize corrosion control. Task Force members will be available to consult with MDEQ and the City of Flint on site in Flint as needed. The Task Force will also coordinate as necessary with federal, state and local public health agencies to assist with protection of public health.

Specifically, the Task Force will provide technical assistance to the MDEQ and the City of Flint to reconnect the Flint system to a new source of drinking water (to be supplied by the Great Lakes Water Authority) and to optimize corrosion control for the Flint system, starting in October 2015. The Task Force will also provide technical assistance to the MDEQ and the City of Flint, as needed, in advance of and following connection of the Flint water system to a new source of drinking water (to be supplied by the Karegnondi Water Authority) and to optimize corrosion control for the Flint system, starting in 2016.

Composition of the Task Force

Region 5 Deputy Administrator Bob Kaplan, Chair

Office of Research and Development Scientist Darren Lytle

Office of Research and Development Scientist Michael Schock

Office of Water Lead and Copper Rule Technical Lead Jeff Kempic

Region 5 Water Division Deputy Director Tim Henry

Region 5 Water Division Drinking Water Section Chief Tom Poy

---

* The Governor will be asked to designate the MDEQ official; The Mayor will be asked to designate the Flint official.

Subject: OCCT Designations for Detroit and Chicago Groups

Hi all,

Attached are the OCCT designations for the Chicago interconnected systems and the Detroit interconnected systems.I asked Andrea to pull the SDWIS data for these two groups of systems (thank you kindly, Andrea!)

All large consecutive systems in the Chicago interconnection are appropriately designated as "system deemed optimized without OCCT" with a reason code of WQP (meaning OWQPs have been designated for them). Chicago's OCCT designation is incorrect (system designated optimized without treatment) and should be updated. So what is the proper OCCT designation for Chicago? And thus for Detroit? The reason code is WQP, as stated above, right?

All of the large systems in the Detroit interconnection are also designated as "system deemed optimized without OCCT" but they all have a reason code of '(b)(3)'. DEQ has acknowledged that the Detroit reason code of '(b)(3) is incorrect. It should be WQP and they will fix that in the next update. For whatever reason, Flint does not have anything reported for either the designation code or reason code.

Sorry I'm not explaining myself very well. I understand that "WQP" is the reason code.

In your email below, you said,

"Chicago's OCCT designation is incorrect (system designated optimized without treatment) and should be updated."

So my question is, if it's not "system designated optimized without treatment", then what is it?

http://www.mlive.com/news/flint/index.ssf/2015/10/declare_flint_a_federal_disast.html

FLINT, MI -- Right out of the gate, Flint's two mayoral candidates tackled the subject plaguing most residents -- the water.

In the first mayoral forum since residents learned Flint's drinking water has a lead problem, Flint mayoral candidate Karen Weaver said the best way to resolve the water issues is to have the federal government declare the city a disaster area.

Weaver and incumbent Mayor Dayne Walling faced off Tuesday, Oct. 14 at St. Michael's Catholic Church in Flint. The pair covered questions on the city's water crisis, public safety, the economy, and education.

Walling said he has a plan to improve the water by fighting for the state to provide resources. He said he also plans to look to partners to help provide funding for the reconnection to Detroit.

"We all recognize that Flint has to have safe water," Walling said. "I've made the recommendation for us to reconnect to Detroit because that's the fastest way that we can bring the additional corrosion control into our system and stabilize our water. We also have to address the long term challenges with lead. This has been devastating for our community. The cost to reconnect to Detroit is $12 million."

Weaver said she thinks it is time for federal intervention.

"We need to have Flint declared as a federal disaster area, because we need some federal funds to help us fix this mess that we're in," Weaver said. "Right now we're faced with the largest public health and infrastructure crisis that Flint has ever witnessed – that we've ever seen."

Three buildings within the Flint School District have tested above the federal limits for lead in the drinking water.

Water at Eisenhower and Freeman elementary schools, along with Brownell/Holmes STEM academies tested above 15 parts per billion for lead -- the safety standard set by the federal government.

One of the schools tested at more than six times the federal limit.

The other big issue the candidates tackled was crime in Flint.

Walling said a plan is in place to reduce gun violence in the community. He said the violent crime rate is on the decline over the past three years.

"We have seen a rise in homicides this year, but we do still see a long term downward trend in that, and that's important," Walling said.

While there has been a call for more police on the streets, Walling said the important thing is getting them in areas where they are needed.

"The reality is we don't have an officer to put in every neighborhood, but we're putting them in places where they can save lives and make a difference," Walling said.

Weaver said the city needs more police, but also needs active citizens.

"One of the things I've always talked about was community policing," Weaver said. "We need to bring community policemen back to the city of Flint."

Another way to reverse the trend of escalating homicides and crime, Weaver said, is to prioritize complaints made by residents to police. She said taking the unresolved complaints seriously will help reduce crime.

"In order to reverse the trend of escalating homicide in the city of Flint, one thing that we're gonna have to do is take more seriously the complaints our residents make," Weaver said. "We got to take those seriously."

The election will be held on Nov. 3.

http://www.philly.com/philly/news/20151014_Bucks_water_company_to_aid_Michigan_community.html#AeqXKYq8iC0sm

Last updated: Wednesday, October 14, 2015, 1:08 AM

BUCKS COUNTY

Water company to aid Michigan community

BENSALEM ZeroWater, a Bensalem-based water company, said Tuesday that it is providing water filters and support to the people of Flint, Mich., during that city's water crisis.

After long-standing issues with the smell and taste of its water, a public health emergency was declared for Flint this month after doctors at a children's hospital found that students had been drinking lead-poisoned water from the Flint River.

Even small amounts of lead can cause a variety of ailments in children and adults, experts say.

"We believe we can really help the community by providing as many filters . . . as quickly as possible," Doug Kellam, CEO of ZeroWater, said in a statement. "The team is working around the clock with United Way and others to help make this happen."

ZeroWater, working with the Flint School District and local United Way, said it would donate 5,000 portable water filters to students at Flint schools, and redistribute filters from around the country to retail stores that are affected.

ZeroWater said it produces filters that use gravity to remove a majority of the chemicals from water. Flint is reconnecting its water supply to Detroit's water system, which comes from Lake Huron. **- Khalil Williams**

http://michiganradio.org/post/grand-rapids-public-schools-test-drinking-water-lead#stream/0

By: Tracy Samilton 10/14/15

Grand Rapids Public Schools plans to test the drinking water in its schools for lead.

The district will start with older buildings first. They are more likely to have lead pipes.

John Helmholdt is Communications Director for Grand Rapids Public Schools. He says the district had already planned to do the testing before high lead levels were found in some Flint homes and school buildings.

"This is all the more reason we should be doing it, having seen what our friends in Flint have gone through," says Helmholdt.

A Detroit Public Schools spokeswoman says the district plans to continue testing for lead on a case-by-case basis, and when water quality is questioned.

The Michigan Department of Environmental Quality is urging all school districts with older buildings to test the tap water for lead.

http://www.dailypress.net/page/content.detail/id/946902/A-roundup-of-recent-Michigan-newspaper-editorials.html?isap=1&nav=5046

The Detroit Free Press. Oct. 8, 2015

Flint water crisis: An obscene failure of government.

There's good news: The City of Flint could soon reconnect to the Detroit Water and Sewer Department, a water source that doesn't leach lead from aging pipes into the municipal water supply.

And there's bad news: Three Flint elementary schools have water with lead levels more than 15 parts per billion, which is the limit according to U.S. Environmental Protection Agency guidelines. At one school, Freeman Elementary, water tests found lead levels of 101 ppb. Add this to months of data showing elevated lead levels in homes across Flint, and a higher percentage of children with elevated blood-lead levels.

Lead poisoning causes behavioral and developmental problems in children. It is irreversible. Pregnant women and children are most vulnerable. The U.S. Centers for Disease Control and Prevention say there is no acceptable level of lead exposure.

And in at least three Flint schools, children have been drinking lead-contaminated water for up to 16 months.

Sixteen months, as Flint residents told the state again and again that their water wasn't right. Sixteen months, as independent researchers meticulously documented rising lead levels in water and in the blood of Flint children. Sixteen months, as the state worked to disparage and discredit the work of respected scientists, even as its own data supported those findings.

At a press conference Thursday, Gov. Rick Snyder appeared chastened.

He should.

Snyder appoints the head of the Michigan Department of Environmental Quality, the agency charged with ensuring that drinking water throughout our state is safe.

In Flint, it failed.

Flint's decisions first to join a new regional water authority, and then to pump water from the Flint River — ending a decades-long relationship with Detroit's system — were made while Flint was under state oversight, during the tenure of a Snyder-appointed emergency manager charged with balancing Flint's budget. That system is justified by the governor's constitutional responsibility to attend to the health and wellness of all Michiganders.

In Flint, he failed.

This newspaper twice endorsed Snyder for governor, albeit with grave reservations. But because of the relative weakness of his opponents, the leadership he displayed in resolving Detroit's protracted financial crisis and our hope that he would use his business acumen to ensure that government better served people, he narrowly won our endorsement.

Last year, in a detailed analysis of Snyder's record, this editorial board expressed our dissatisfaction about Snyder's first term: "The governor balanced the budget at the expense of cities and school districts. His disdain for politics is inappropriate in the state's chief politician; his deficiencies as a deal-maker have sometimes resulted in terrible consequences for Michiganders."

This, we wrote, was Snyder's most profound flaw: "He has got to see people, not sums, as the bottom line of the state balance sheet."

We wrote that he rarely exhibited strong, decisive leadership, that he must "grow into a more sure-footed, principled leader." That we were fearful of what Snyder's second term could hold.

Snyder defended the state's decisions on Thursday, saying it had followed EPA and MDEQ testing protocols. The state did the minimum required, his responses implied. Why should it have to do more?

This is what Snyder does not understand. To lead a state, accountancy is not sufficient. To lead a state, a balanced budget is not sufficient. To lead a state, doing only what is required is not sufficient.

The modern vogue for paring services and cutting budgets is an insidious misunderstanding of the foundations of government. Fiscal conservationism is correct to suggest that government should recognize the value of a dollar. But it is absolutely incorrect when it considers the value of a dollar more significant than other values. A dollar saved at the expense of public safety. A dollar saved at the expense of Flint's children. A dollar saved at the expense of the public trust. These are equations that can never balance.

At this math, Snyder has consistently failed.

When Flint began to pump river water, it opted not to add a chemical that would have created a film inside its aging service pipes, preventing lead from entering the water. MDEQ signed off on that plan. Snyder's representatives have said both decisions were in progress before Flint's emergency managers were appointed, belying the reality of an emergency manager's broad authority in the city he or she is charged to lead.

That Flint has aging service lines with lead materials shouldn't have been a surprise. That Flint would need to treat the water it pumped to ensure it could flow safely through those lines shouldn't have been at issue.

Here is all we can surmise: Pumping Flint River water saved money. And that, as they say, was that.

Snyder says that his team will issue an "after action report," with recommendations about how things could have been done differently. This is a necessary step and should be conducted by a team with sufficient independence from Snyder's office — and the MDEQ — to reach impartial conclusions.

Snyder has asked the Michigan Legislature to contribute $6 million of the $12 million it will cost Flint to purchase its water from Detroit. The Charles Stewart Mott Foundation and the city itself will cover the remaining costs. The transition could be complete within two weeks. We applaud the Mott Foundation for its contribution and urge the Legislature to approve its portion of the funds required without delay.

Snyder and other officials have said Flint will continue to work to replace lead service lines. This is necessary work. The state has devoted $1 million to pay for water filters for Flint residents, another helpful measure.

People. Not sums.

Thus endeth the lesson. It is one our government should not forget. It is one Flint's children can't forget.

The Lansing State Journal. Oct. 6, 2015

No rest for BWL, Peffley.

The door on the J. Peter Lark era at Lansing's Board of Water & Light is finally closed. On Sept. 22, longtime BWL employee Dick Peffley, who had been serving as interim general manager since Lark was fired in January, was named permanent general manager of the state's largest municipally owned utility.

Is Dick Peffley the right person to lead BWL into a future that requires rebuilding public trust damaged by poor response to the December 2013 ice storm and replacing the Eckert Power Station, set to go offline by 2020?

BWL commissioners clearly think so; the decision to hire him was unanimous. Peffley is a known commodity at BWL after nearly four decades. And he knows the challenges he faces.

. The culture must change at BWL. That was a resounding conclusion from the Community Review Team commissioned by Lansing's mayor to review the utility's response to the ice storm. By many accounts, progress is happening. In one move that shows Peffley recognizes the need for change, he canceled $75,000 worth of art the previous executive team had ordered for a new customer service center this spring. He instead had the walls decorated with historic photos and posters. The move saved about $60,000 of ratepayer money. The changes must go far beyond the cosmetic. Is the utility ready for the next disaster? Is there accountability at every level?

. The power being generated at the Eckert Power Station must be replaced. The coal-fired power station, which contributes the iconic smokestacks to the Lansing skyline, generates one-third of the utility's power. As it reaches the end of its operational life, options are building a new plant, buying power elsewhere or investing in alternative or renewable energy sources. A Citizens Advisory Committee has been appointed and public meetings have been set. What comes next will depend on leadership from both Peffley and the board.

. BWL's future as a municipally owned utility is in question. Mayor Virg Bernero has said he plans to study whether assets such as BWL and City Hall should be sold as part of a comprehensive review of the city's assets and liabilities. It's not surprising that Peffley and the BWL board would oppose such an idea. Self-preservation is a strong motivator.

Yet Peffley — and his team — can't get caught up in fray. Leading BWL in the present and future is a huge job. Peffley has the institutional and industry experience to do it well. The best thing he can do is stay focused and lead with transparency and accountability.

The Traverse City Record-Eagle. Oct. 6, 2015.

Federal money nothing short of dams' bailout.

It's an offer they shouldn't refuse.

Local officials should keep eight well-known words in mind when federal officials offer to shoulder the lion's share of costs associated with the Boardman dam removal project: Don't look a gift horse in the mouth.

It's a proverb with roots about 1,600 years old and constitutes some pretty tried-and-true advice for the group of officials who learned this week that they will be asked to make a relatively minimal commitment to the future of the Boardman River dams removal project in exchange for the cash infusion.

There's no such thing as free money, but an offer U.S. Army Corps of Engineers officials will float to local officials Wednesday night is as close to free as federal cash gets. The deal — as explained by Carl Platz, a project manager for the Corps — would supply an $8 million infusion to foot the bill for most, if not all, of the Boardman dam deconstruction project.

"We went from dead in the water to essentially having a vast majority of the funding commitment from federal sources," Traverse City Mayor Michael Estes said Monday.

The cash would alleviate concerns that the overall plan to deconstruct three dams and modify a forth along the Boardman River, returning the stream to its natural state, could be derailed by either fundraising difficulties or owners reluctant to chip in for the next phase of the project — Grand Traverse County in the case of the Boardman dam.

The funding provided by the Corps and the Environmental Protection Agency waives a standard requirement that federal funding for such projects be matched in a 65 to 35 percent split — the latter paid by local funding sources, Platz said.

But that's where the strings come in.

Platz explained to Record-Eagle staff in a meeting Monday that the Corps wants officials from the City of Traverse City, Grand Traverse County and the Grand Traverse Band of Ottawa and Chippewa Indians all to put in writing their commitment to completing the final two phases of the project — the Sabin dam deconstruction and modification of the Union Street dam.

The county owns both the Boardman and Sabin dams.

At least one Grand Traverse County commissioner, Alisa Kroupa, balked at the offer and voiced concerns about committing the county to a "financial liability" for the future Sabin dam removal project.

Those are concerns easily are boiled down to dollars and cents. Officials estimate deconstruction of the Boardman dam will cost about $8 million, a bill covered by a combination of the federal cash and grants already secured by local project managers. The federal agencies also committed to spend $2.7 million on the two remaining phases of the dam removal project.

The future financial liability the county would face for its 35 percent split of Sabin dam deconstruction — an estimated $2.7 million total project cost — amounts to about $950,000 barring any local grants or donations that would minimize the bill. And there's no stipulation that the county foot the entire match alone.

Holding back a $10.7 million gift to save $950,000 simply doesn't make sense.

___

The Port Huron Times Herald. Oct. 8, 2015.

McMorran decision is best for city and college.

We apologize for the cliché, but sometimes we need reminding that doing the same thing over and over again and expecting different results is not a healthy sign.

So it is with McMorran Place in downtown Port Huron.

Throughout recent memory, city administrators and City Council have searched for ways to make complex less of a millstone around the neck of city finances. Taxpayers have fumed about the "three M's" — museums, marinas and McMorran — while taxes and utility bills increased.

The city and the McMorran Authority hired consultants and paid for studies. And the advice was the obvious. What you're doing isn't working. If you want McMorran to work, and if you want it to last, you need to do things differently.

Presciently, some of that advice — from consultants Brailsford and Dunlavey — recommended turning the junior arena into a field house. In that role, the junior arena — or pavilion as it is also known — could be used to attract a wider variety of activities to the complex during a larger part of the calendar.

That is precisely what St. Clair County Community College proposes to do with the building. And that is part of the reason that the McMorran Authority board voted Wednesday to recommend to the Port Huron City Council that it sell the junior arena to the college.

The larger part of the decision has to do with finances. Getting out from under the pavilion's operating costs and capital needs will save the city and its taxpayers hundreds of thousands of dollars over the near term and millions over a few years.

Probably more significant is what it means for the college, for downtown and the community. What SC4 proposes would mean significant new traffic in downtown Port Huron for the benefit of stores, restaurants and other businesses. It would allow the college room to build its proposed medical education center, which is a huge investment in both the college and in high-demand career fields.

The Port Huron Minor Hockey Association's proposal might do the first thing — cut city costs. In all other regards, it is doing the same thing over and over again and expecting a different result.

City Council should follow the McMorran board's recommendation and make the junior arena part of SC4.

By: Mark Bashore 10/13/15

The Michigan Department of Environmental Quality has been feeling the heat not just over high levels of lead in Flint's drinking water, but for denying there was a problem in the face of evidence. Current State speaks with DEQ Director Dan Wyant.

State and other officials face important challenges trying to correct Flint's alarming water situation. Among the challenges: getting to the bottom of dangerously high readings of lead in several Flint schools. Among the questions: why were months of complaints of unsatisfactory water countered with assurances that it was safe?

In the meantime, at risk Flint residents have been getting bottled water and free lead filters. Plans are also moving forward to reconnect the city to Detroit water. Those measures are part of 10-point plan put forth by Gov. Rick Snyder.

One agency at the center of the Flint drinking water crisis is the Michigan Department of Environmental Quality. Current State talks with DEQ Director Dan Wyant.

http://www.mlive.com/news/flint/index.ssf/2015/10/ex_emergency_manager_earley_sa.html

By Ron Fonger | rfonger1@mlive.com
on October 13, 2015 at 3:00 PM, updated October 13, 2015 at 4:24 PM

FLINT, MI — Former emergency manager Darnell Earley says he's not to blame for the decision to use the Flint River as the city's source of drinking water.

Earley, who served as Flint's emergency manager from September 2013 until January 2015, said in an email to The Flint Journal-MLive on Tuesday, Oct. 13, that the water source decision was made months before he was appointed to run the city by Gov. Rick Snyder.

The Michigan Democratic Party called Tuesday on Snyder to fire Earley from his current position as emergency manager of Detroit Public Schools based on his position in charge in Flint when the switch in water source was made.

Earley said he had no reason at the time to second-guess what appeared to have been a consensus decision.

"The decision to separate from (the Detroit Water and Sewerage Department) and go with the Karegnondi Water Authority, including the decision to pump Flint River water in the interim, were both a part of a long-term plan that was approved by Flint's mayor, and confirmed by a City Council vote of 7-1 in March of 2013 — a full seven months before I began my term as emergency manager," Earley's email says.

Although the Flint City Council voted in March 2013 in support of moving to the KWA pipeline — a new pipeline that would serve the region with Lake Huron water — there is no record that the council voted to use the Flint River as a short-term drinking water source.

Earley, who toasted the switch to the river with city leaders in a ceremony in April 2014, said it was his "responsibility to implement the previously accepted and approved plan" since the city's contract with the Detroit water system expired during his term as emergency manager.

"It did not fall to me to second guess or to invalidate the actions that were taken prior to my appointment," his statement says.

The state Democrats said in a news release that Earley was in charge of Flint "when the decision was made to switch the city to unsafe drinking water."

While Earley oversaw the switch, the decision to switch was signed by Flint's previous state-appointed emergency manager, Ed Kurtz.

Sara Wurfel, a spokeswoman for Snyder, said in a statement Tuesday, Oct. 13, the decision to use the Flint River "was pushed or supported by the city and community" and said the city had no choice but to find another source of water after the Detroit Water and Sewerage Department terminated Flint's contract to continue purchasing water under the terms of its expired contract.

"We also know Darnell cares deeply about the kids and communities he serves," Wurfel's email said. "We're focused on solving this challenging infrastructure issue, moving forward quickly and doing everything we can to ensure Flint has safe drinking water. ..."

The Democrats' statement said in part, "If poisoning children wasn't bad enough, after Earley failed the citizens of Flint, the governor inexplicably rewarded him with another appointment — emergency manager for Detroit Public Schools — where he is now responsible for the education of nearly 50,000 students."

Flint Mayor Dayne Walling said Tuesday that the vote to become a partner in the KWA, a new regional water authority, should not be confused with a vote to use the Flint River as a temporary source of drinking water — a vote that never happened.

In contrast to using the river, the city also could have negotiated a short-term contract to continue buying water from DWSD, for example.

"No resolution brought before myself or the City Council by any emergency manager (made) the Flint River the temporary source," Walling said.

Kurtz signed an order March 29, 2013, for Flint to eventually purchase water from the KWA pipeline after it was finished, but that order says nothing about the city's use of the river.

In June 2013, Kurtz signed another order — this one to enter into a contract with Lockwood, Andrews & Newnam Inc. for professional engineering services to put the Flint water treatment plant into operation "using the Flint River as a primary drinking water source for approximately two years and then converting to KWA delivered lake water when available. ..."

In September 2013, a new emergency manager — Michael Brown — also approved an order for a contract among Flint, Genesee County and the KWA.

Flint began using the Flint River in late April 2014.

Last week, after warnings from researchers and doctors of elevated lead levels in drinking water and the blood of children since the switch, Snyder announced a plan to finance the purchase of nine months of water from the Detroit water system for Flint.

The city remains a partner in the KWA pipeline plan and expects to use water from that pipeline, which is under construction and expected to serve the region with water from Lake Huron after it is completed in 2016.

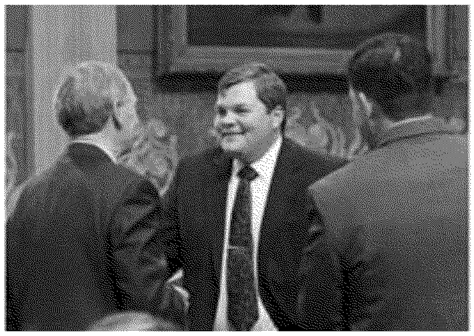
http://michiganradio.org/post/where-are-records-lawmaker-wants-answers-flint-water-switch#stream/0

By: Steve Carmody 10/13/15

A state lawmaker is heading to court to force the city of Flint and a state agency to release documents related to the decision to make the Flint River the city's drinking water source.



State Rep. Phil Phelps, D-Flushing.

Credit Courtesy of the office of State Rep. Phil Phelps

A year and a half ago, the city switched from the Detroit Water and Sewerage Department to the Flint River.

Initially, there were complaints about the smell, taste, and appearance of the city's drinking water. More problems, including high levels of lead in the water in many homes, led Gov. Rick Snyder to address a $12 million plan to return the city to Detroit water, until a new pipeline from Lake Huron is completed next year.

But State Rep. Phil Phelps, D-Flushing, wants to know more about the decision-making process that took place before the switch. He's filed Freedom of Information Act requests with both the city and the Michigan Department of Environmental Quality.

Specifically, Phelps wants to see the permits granted to make the switch possible.

However, the city and the MDEQ have rejected Phelps FOIA requests. They say the documents he requested don't exist.

"For them to say there's other documents I simply didn't reference by name is disingenuous," says Phelps.

Phelps is asking two courts to weigh in.

By the end of this week, he plans to file a lawsuit in the Court of Claims against the MDEQ and in circuit court against the city of Flint.

Flint City Administrator Natasha Henderson issued a statement:

"The City of Flint is operating as permitted by the MDEQ, however the specific documents requested by Rep. Phelps do not exist. As the City's full-time back up water source during the previous contract with DWSD, the Flint River was already an approved drinking water source. This issue could be as simple as a miscommunication on what was sought by Rep. Phelps and the City is willing to meet with his office to clarify and provide more information."

GLWA won't take over Detroit six-county system until Jan. 1, 2016; meanwhile petitions circulate to mandate Detroit referendum on contract

Flint Water Makes us Sick
WHERE'S THE ...al ...ERnment

Flint water protest Oct. 12, 2015/Photo: Record-Eagle

By Diane Bukowski

October 13, 2015

(VOD; there is a news story below this from weather.com which summarizes

events with Flint water.)

DETROIT — Michigan Governor Rick Snyder announced Oct. 8 that he will "allow" the city of Flint to reconnect its water supply "with the Great Lakes Water Authority (GLWA);" city officials said the move could take place in two weeks.

Studies have shown that not only has Flint's separated system resulted in water contaminated with fecal bacteria, but also with lead. Dr. Mona Hanna-Atisha of Hurley Medical Center in Flint (in video above) said her study showed lead levels in the blood of Flint's majority-Black children jumped from 2.5 percent to 6.3 percent beginning in Jan. 1, 2015 to Sept. 15 this year, in certain zip codes.

"I'm in full support of the return to the Great Lakes Water Authority," Snyder said during a press conference. "We all care about the citizens of Flint."

Snyder neglected to acknowledge that the contract between the City of Detroit and the GLWA is not in effect yet, as GLWA chair Robert Daddow repeatedly says when confronted with difficult questions.

On Sept. 29, he responded to a DWSD engineer's complaint regarding the lay-off of licensed engineers there by saying, ". . .as you may not be aware, the GLWA is not yet responsible for the operations of the regional water and sewer operations at this point in time; the DWSD BOWC [Board of Water Commissioners] is responsible. While the lease was signed in June 2015, it had a number of 'conditions precedent' that must be satisfied prior to the lease becoming effective and the operations transferring from DWSD to GLWA."

OUR WATER!
OUR VOTE!
Water is a
Human Right.

The "drop-dead" date for the takeover is Jan. 1, 2016. Meanwhile, the Coalition to Save the Detroit Water and Sewerage Department is circulating state-mandated petitions demanding that a referendum be placed on Detroit's ballot to allow Detroiters to vote on the takeover of their system. If they vote “NO,” the contract would be invalidated under provisions of PA 233 of 1955. (See links below story for more information on the “Our Water Our Vote” campaign.)

Whether the citizens of Flint will benefit from being part of the GLWA remains open to serious question. The likelihood that they along with residents of all six counties under the GLWA will be in danger of exposure to contaminated water would increase greatly under the GLWA board.

The formation of the GLWA was part of the state-introduced, unconstitutional bankruptcy filing for the City of Detroit. A representative of Gov. Snyder sits on the GLWA board, along with one representative each from Oakland, Macomb, and Wayne Counties, and two from Detroit, all with connections to contractors who plan to profit from the transformation. The Detroit City Council will no longer approve such contracts and is currently not doing so for DWSD, according to Council President Brenda Jones.

U.S. District Court Judge Sean Cox oversaw the proposal to form the GLWA during the bankruptcy proceedings. During his ongoing tenure as federal overseer of DWSD, 41 percent of its workers have been laid off, according to its director Sue McCormick, also interim director of the GLWA. The BOWC recently negotiated an agreement with the state Department of Environmental Quality (DEQ) to increase the levels of certain contaminants allowed in water from the DWSD.

The GLWA and the BOWC met jointly July 9, to approve frightening plans to downsize the GLWA significantly from the current DWSD, including:

Dropping spending for water main replacement to $25 million a year, enough to repair only one one percent of the lines;

Shutting down treatment plants and booster stations;

Reducing capital improvement spending from $9 billion to $2.9 billion;

Rescission of planned upgrades for 14 sites;

Reducing GLWA’s daily pumping capacity from 1,760 million to 1,040 million gallons;

Reduction of water intake sites from five to three.

Detroit drivers struggle to safety after their cars were submerged in flood of Aug. 2014.

DWSD’s Wastewater Treatment Plant (WWTP), currently run by contractor EMA, already caused a major crisis in August, 2014, according to DWSD retirees who worked there. They said the huge floods of that month in Detroit and its suburbs, as well as the water crisis in Toledo, Ohio, were directly linked to the cessation of 24/7 maintenance of sewage pumps and other equipment at the WWTP, the largest such facility in the U.S.

“They have reduced staffing to a skeleton crew,” Mike Mulholland, Pres. of AFSCME Local 207, said at the time. “Although there was a torrential rain Monday, the sewage pumps already were not working properly due to minimal maintenance. It is EMA’s intention to strip the plant down and run it remotely as much as it can. Instead of 24/7 maintenance, they only check equipment every few days. The pumping stations at the plant, the incinerators, and other equipment are close to catastrophic failure.”

DWSD retiree Bill Davis said three of the major sewage pumps at the WWTP were not working, having become clogged with sewage and seriously damaged.

On Oct. 11, a coalition of Detroiters under the banner of TRUE, an organization founded by activist Baxter Jones, held a prayer vigil at the Detroit’s U.S. Department of Justice offices on Michigan Avenue in the Federal Building calling for the USDOJ to intervene to stop Michigan’s emergency manager (EM) system. Most of the state’s majority-Black cities and school districts, including the Detroit Public Schools, are run by the state.

Darnell Earley, as EM of Flint, ordered its disconnection from the DWSD system in 2013 “to save money.” He is now EM of the Detroit Public Schools (DPS) and is continuing slash-and-burn policies of the state which have left Detroit children with virtually no public, neighborhood schools since 2005. Those policies have been carried out under Governors John Engler (R), Jennifer Granholm (D) and Gov. Snyder (R).

“It is a very sad day to learn our decision makers decided to compromise the safety of children and child bearing women in the name of greed,” Jones, who has been on a justice lead hunger strike since September 13th, said in a statement. “They have bullied us, and we must pray for the victims and stand fast in solidarity with them.”

Many water activists see the main problem as “Republican” Gov. Rick Snyder, as Mike Moore referred to him in his comment.

In this election year, during which U.S. Representatives and Senators and new candidates from the Republican and Democratic parties are sparring, many activists are being caught up in the “Go Left America” agenda backed by the Democratic Party.

However, the current Democratic administration of U.S. Pres. Barack Obama backed the Detroit bankruptcy during hearings, and earlier refused to conduct an investigation of Voting Rights Act violations in Public Act 4, the predecessor to Michigan’s current PA 436. History has shown that only action by the people themselves changes their circumstances, like the campaign for a people’s vote on the GLWA contract, the rebellions against police killings in Baltimore and elsewhere, and the Montgomery Bus Boycott during the Civil Rights Movement.

For more information on the Our Water Our Vote campaign, including links to petitions themselves, fliers, and instructions for circulating, see:

http://www.metrotimes.com/detroit/politics-and-prejudices-poisoning-flint-and-other-atrocities/Content?oid=2375494

By Jack Lessenberry 10/14/15

Don't you love how our politicians and other so-called leaders refuse to take responsibility for their screw-ups?

Dennis Williams, for example, the roly-poly United Auto Workers union president. He began this round of auto contract talks this summer by giving Fiat Chrysler emperor Sergio Marchionne a big bear hug. Then they negotiated a contract that all the industry and union leaders agreed was a beaut.

Everybody loved it, except the churlish workers themselves. Somehow they were bothered by the fact that there was no plan to phase out the infamous two-tier pay system.

The workers thought they'd at least been promised a cap on the number of lower-paid Tier II workers. They didn't get it. They weren't thrilled when news leaked out that Chrysler planned to move production of two key models to Mexico, and the union didn't protest. They were given a new health care co-op plan they fear will cost them more, and which their union didn't bother to explain how it worked.

Basically, their leaders said, "Take this, you slobs. We know what's good for you." Guess what. Those actually doing the work had the guts and strength to say no. Did Williams then apologize, vow to learn from his mistakes, maybe even make an effort to talk with some real live autoworkers?

That's what he should have done.

Instead, he said, "We don't consider this a setback. We consider (this) a part of the process." What bullshit!

But that pales in comparison with what happened in Flint. Ask yourself this: What do you suppose would've happened if some crisis required Gov. Rick Snyder to put an emergency manager in a place like Birmingham or Bloomfield Hills?

A town, that is full of white people who vote Republican. Let's say that manager stopped buying Detroit water to save money, and announced the city would take water out of the Rouge River instead. Soon, the residents complained the water smelled bad, tasted funny, and was making them sick.

Later, after the emergency manager had lied and said the water was just as safe, researchers found *E. Coli* and other harmful bacteria in the water. Next, they discovered the chemicals the city was using to kill the bacteria gave people an elevated risk of cancer. Finally, it was shown that the river water was so corrosive that it caused lead to leach out of old city pipes.

Finally, babies and small children began showing up with lead poisoning. Does anyone really think state officials wouldn't have sprung into action, and immediately intervened?

My guess is that even before the lead poisoning was discovered, a way and funds would've been found to hook the city back up to Detroit water, and the emergency manager would've been indicted. But alas, all of that happened in Flint, where the people affected are poor and largely black.

In fact, the lead poisoning was only uncovered after former MT staffer Curt Guyette got an internal EPA memo that convinced him to "believe there was a real problem with lead in the city water." The state and the city denied that, saying their tests showed the water was fine.

So in a fine bit of unsung heroism, Guyette, a coalition of residents, and Mark Edwards, a professor at Virginia Tech, came up with a plan to test the water at nearly 300 homes.

Edwards got a grant from the National Science Foundation; Guyette and his present employer, the ACLU, helped coordinate and conduct the study.

"In a little over two weeks, we tested about four times as many homes as the city tested in six months," he told me. There was indeed lead in the water. A week later, the hospital study "both built upon and validated our study, which Brad Wurfel (the communications spokesman, aka administration mouthpiece at the Michigan Department of Environmental Quality) was trying his best to discredit."

Guyette added, "If it hadn't have been for this unprecedented effort ... kids in Flint would still be getting lead-poisoned because the city and MDEQ would still be assuring everyone that the water was safe."

That's inspiring, but Guyette is wrong about one thing: Kids are still getting poisoned. Despite the state's earlier assurance that the water was fine, the Snyder administration had quietly been working to get a donor to buy water filters to be distributed free by churches in poor areas.

The Flint Journal said the state told the pastors to keep quiet about it. After it was clear that it was Snyder's emergency manager who was responsible for the switch, the governor dragged his feet for a few days, made some usual vague comments, and then announced with some fanfare that the state would provide a paltry $1 million to buy more filters and help "improve corrosion controls."

What about switching back to much safer Detroit water? Mayor Dayne Walling, who is running for re-election, said he had no interest in that, thank you.

After his office was besieged by angry residents, he said he was still "considering it," but said it would cost the city $2 million a month it doesn't have.

Pat Clawson, a former investigative reporter for CNN who lives in the Flint area, told me the mayor's "handling of this crisis shows he is absolutely unfit to hold public office."

Snyder, of course, didn't offer to help get Flint residents reconnected to safe water again. I wonder if, just out of curiosity, someone might ask both of them what the cost of a bunch of irreversibly brain-damaged children might be?

Mass Shooting Update

What struck me most about the school shooting in Oregon was that the media, even *The New York Times*, now have a format for every new mass gun atrocity.

News story the first day, with sidebar on the terrified ones who hid and heard the gunshots. The next day, profiles of the shooter and the slain, reports on the angry reaction of the president, with a few comments from the pro-gun nuts.

Yes, they've got it down pat. The fact is that we love our guns and our potential ability to murder far more than we do our children, and we might as well admit it.

We could, of course, stop nearly all these killings, if we had sane laws that took all these guns away. Hey, fanatics: You heard that right. I indeed *want* the government to take your guns away, except maybe those you keep in a hunting lodge.

Detroit News editorial page editor Nolan Finley wrote a column after Oregon in which he wondered if President Obama wanted to impose the same horribly restrictive gun laws on this country that Great Britain and Australia have.

"Owners of all weapons have to be licensed and the permits expire after five years (!)

You have to "then wait nearly a month before receiving the firearm," the horrified Finley said.

Well, I don't know what Obama wants, but that sounds pretty good to me. What Finley didn't mention was that 33,169 Americans died from guns in 2013.

In Australia in 2012, the total was 226. In Great Britain the year before, there were 59 firearms-related murders.

See what can happen when you lose a little "freedom?"

Why, I'll bet those Australian and British commies even force local governments to provide clean and unpolluted drinking water. So I say, let's sign up for more repression.

Tens of thousands who won't die may be glad we did.

Jack Lessenberry is head of the journalism program at Wayne State University and the senior political analyst for Michigan Public Radio.

http://michiganradio.org/post/flint-mayoral-debate-turns-water-and-other-issues#stream/0

By: Steve Carmody 10/14/15

Last night's mayoral debate in Flint included several personal attacks between the candidates.

Incumbent Mayor Dayne Walling and challenger Karen Weaver debated for more than an hour at St. Michael's Catholic Church

Credit Steve Carmody / Michigan Radio

The moderators questioned incumbent Mayor Dayne Walling and challenger Karen Weaver for over an hour on several issues.

But the main issue was Flint's ongoing water problems.

Since switching to the Flint River for the city's drinking water, there have been numerous problems, including elevated lead levels in the water at many Flint homes.

Karen Weaver repeatedly linked incumbent Mayor Dayne Walling to the city's ongoing drinking water problems and to potential long-term effects of elevated lead levels in children.

“If you care so much about the kids, you would have spoken up about the lead that’s in the water,” Weaver charged.

Walling responded that he was “offended” by Weaver’s charge.

Challenger Karen Weaver repeatedly linked incumbent Mayor Dayne Walling to Flint's drinking water problems. Walling stressed his experience in office.

Credit Steve Carmody / Michigan Radio

He admitted he wished the city had returned to Detroit water sooner. But he added he’s working to turn make that change happen.

“You have to look at actions, because actions speak a lot louder than words,” responded Walling.

The incumbent mayor stressed the need for someone with experience to lead Flint during these difficult times, and made note of the connections he’s made in office.

“I’ve got the relationships with the White House. I’ve got the ability to get to the governor,” Walling said, reminding the dozens of people listening to the debate that Gov. Snyder was just in Flint to announce a plan to return the city to Detroit water.

But Karen Weaver noted another action involving the governor with which Mayor Walling has experience.

“I don’t have the kind of experience you have because your experience is what got us an emergency manager,” Weaver said.

The two candidates also answered questions about crime, schools, and economic development.

Next month, Flint voters will decide whether they want to give Dayne Walling another four years in the mayor’s office, or if they are willing to give political newcomer Karen Weaver a chance instead.

Mike/Darren – We were just talking about the sampling here and I very strongly suggest that there be a presentation to the folks in Flint (health depts., residents, press) that explains what the sampling is and what it is not (e.g., exposure assessment, treatment evaluation, diagnostics…). This has to be dealt with first/upfront or we are going to have to be explaining the differences to folks over and over. The same with the AL (not health-based). I also think for the sake of those that do not live in the DW world, that we provide a brief overview of corrosion control treatment (types, effectiveness, limitations/challenges).

All: Please keep our lab folks (Amanda, George, Dennis) in the loop on the sampling plans so they know what's being discussed.

Miguel/Jennifer/Ed;

I found this document that Francine (I believe) used to summarize the deviations in the Battle Creek sampling protocol from the 3Ts.

There are three things I would note, and also offer a reminder that Darren and I would be happy to discuss the technical issues with how to design/modify building sampling protocols depending on the desired questions to be answered, with any of the Flint staff, state or county health department staff, or interested physicians.

•□□□□□□□ First, a reminder that the purpose of the 3Ts protocol is to help locate and identify lead sources that could pose a health danger. The 20 ppb level is NOT A HEALTH-BASED SAFE LEVEL. I have seen this misrepresented or misinterpreted in statements to the press, in the press itself, in engineering reports, you name it. All over the country. A very common, but very important, mistake.

•□□□□□□□ The trigger level for remediation, therefore, should be defined by the purpose of the investigation and the goals of the health agency or entity conducting the investigation. This is NOT EXPOSURE ASSESSMENT SAMPLING, but it could be (depending on stagnation time before sampling) an assessment of the level of worst risk for the first child or few children in line using that individual tap/outlet.

•□□□□□□□ Third, the volumes could be adjusted, based on the types of outlets (long necked faucets versus bubblers, for instance, or water coolers versus automated water conservation faucets). It had been observed in some prior work by Region 3, that using 250 mL, it was often difficult to differentiate if a lead source was the faucet, the connection tubing, or the shut-off valve at the sink. Money was wasted replacing faucets when the real lead-emitting culprit was the shut-off valve. Therefore, as a first approximation to try to isolate the faucet from the valves, a common situation in schools and buildings, we broke the 250 mL sample into two 125 mL samples. There were cases found in Battle Creek where the 2nd 125 mL sample was higher in lead than the first 125 mL, so we belive that this was at least partially successful. Other sensible adjustments are equally justifiable.

We can furnish some papers and presentations we have done that shed a little more light on sampling issues and protocols, if of interest. We also have found that analyzing for zinc, copper and iron simultaneously on the same sample, can sometimes be helpful in more correctly identifying the source of the lead (eg. Brass device, soldered joints, lead accumulated on galvanized pipe scales).

I know there was a final report developed for the project, but all EPA participants declined to be an official co-author of the report (for an assortment of reasons). I know I saw a draft, but I don't have a final copy (that I can find), either. I am confident that the note attached accurately describes the modifications we intended.

--Mike

Hi Jennifer,

We have been in contact with Kellogg trying to get a copy of the latest version of the protocol. I will try to find out the status.

BTW, Francine did retire only moved to another office – Indian Affairs I believe.

Subject: HQ partnership with Kellogg Foundation (MI) on lead in schools
Importance: High

Hi, Ed. I remember back in 2012, Francine St. Denis, partnered with the Kellogg Foundation in MI, to sample for lead in schools at Calhoun County Health Dept (Paul Makoski). MDEQ, community water program (Richard Benzie) is looking for the sampling protocol that was used in that sampling effort. We at Region 5 were not involved in this project, so we did not receive a final report—if there was a final report. I'm pretty sure Francine has retired, so I'm wondering if you are aware of a final report, which would document the sampling protocol—not just first draw samples, but sequential sampling.

Thank you for checking this out, Ed. The State is looking for this tomorrow, if possible—yes, it's related to Flint.

Subject: flint article link --> radio interview with Dan Wyant (MDEQ)

Hi All,

You can follow the link below to a MI Radio interview with Dan Wyant that accompanies this article (below). The interview is ~17 minutes long, and is much more in-depth than what is summarized in the article.

Source: http://michiganradio.org/post/mdeq-director-flint-water-crisis-has-shaken-faith-government#stream/0

MDEQ director: Flint water crisis has shaken faith in government

By Stateside Staff · 20 hours ago

State and local officials have done an about-face when it comes to Flint's water crisis. For months, residents and even experts who raised concerns about the water's safety were dismissed. That's until mounting evidence – especially about high lead levels in kids – made the critics impossible to ignore.

But Michigan's top environmental regulator says no one should lose their job. "I guess what is at issue is experience rather than wrongdoing," Michigan Department of Environmental Quality Director Dan Wyant told Stateside's Cynthia Canty. Wyant says he worries the Flint water crisis has caused people to lose faith in the state's ability to protect them. “I do. I think trust is going to be a significant issue for us,” Wyant said. “The only way we build back trust is demonstrating that the water's safe.”

Wyant also acknowledged that experts outside government who sounded the alarm – some of whom were discredited at the time by state officials – deserve credit for bringing the water problems to light. "And so if there was any disrespect or discredit for that I have to apologize and I have to take responsibility for that and so I am addressing it," Wyant said. "Clearly this is a real issue." But Wyant says his agency followed federal law when it comes to ensuring safe water. "Those protocols were followed," Wyant said. "What's at issue is whether those protocols are appropriate."

Wyant says the agency is committed to learning from what went wrong in Flint. But he says no one, including himself, should lose their job over what happened. "What is at issue is experience, rather than wrongdoing," Wyant said. Problems with Flint's water system emerged shortly after the city switched from Detroit's system to the Flint River to save money in 2014. The city is expected to return to Detroit water soon.

Thanks,

Andrea Porter

Subject: FW: Question: OCCT Designations Groups

Hi, Kris. Under the LCR milestones, it is my understanding that systems are to have an "OCCT designation" and then a reason code. I'm wondering what are the choices in the drop down menu in SDWIS for "OCCT designation"?

Subject: RE: Question: OCCT Designations for Detroit and Chicago Groups

Sorry I'm not explaining myself very well. I understand that "WQP" is the reason code.

In your email below, you said,

"Chicago's OCCT designation is incorrect (system designated optimized without treatment) and should be updated."

So my question is, if it's not "system designated optimized without treatment", then what is it?

Subject: OCCT Designations for Detroit and Chicago Groups

Hi all,

Attached are the OCCT designations for the Chicago interconnected systems and the Detroit interconnected systems.I asked Andrea to pull the SDWIS data for these two groups of systems (thank you kindly, Andrea!)

All large consecutive systems in the Chicago interconnection are appropriately designated as "system deemed optimized without OCCT" with a reason code of WQP (meaning OWQPs have been designated for them). Chicago's OCCT designation is incorrect (system designated optimized without treatment) and should be updated. So what is the proper OCCT designation for Chicago? And thus for Detroit? The reason code is WQP, as stated above, right?

All of the large systems in the Detroit interconnection are also designated as "system deemed optimized without OCCT" but they all have a reason code of '(b)(3)'. DEQ has acknowledged that the Detroit reason code of '(b)(3) is incorrect. It should be WQP and they will fix that in the next update. For whatever reason, Flint does not have anything reported for either the designation code or reason code.

Hi Maryann,

Just FYI - Mike Schock (ORD) and I have been advocating some tweaks to the 3Ts protocol for some time so we are thinking they would be good to suggest for use in Flint. Although EPA has made no official changes to the 3Ts protocol at this point., we think it would be appropriate to suggest incorporating the tweaks for this effort.

FOR IMMEDIATE RELEASE

October XX, 2015

EPA Establishes Flint Safe Drinking Water Task Force

Task Force to Provide Agency's Technical Expertise to MDEQ and City of Flint

CHICAGO- Today EPA Region 5 Administrator Susan Hedman established the Flint Safe Drinking Water Task Force to provide the Agency's technical expertise through regular, but no less than weekly, conversations with designated officials from Michigan Department of Environmental Quality (MDEQ) and the City of Flint. The Task Force will assist with developing and implementing a plan to secure water quality, including measures to optimize corrosion control. Task Force members will be available to consult with MDEQ and the City of

Flint on site in Flint as needed. The Task Force will also coordinate as necessary with federal, state and local public health agencies to assist with protection of public health.

Specifically, the Task Force will provide technical assistance to the MDEQ and the City of Flint to reconnect the Flint system to a new source of drinking water (to be supplied by the Great Lakes Water Authority) and to optimize corrosion control for the Flint system, starting in October 2015. The Task Force will also provide technical assistance to the MDEQ and the City of Flint, as needed, in advance of and following connection of the Flint water system to a new source of drinking water (to be supplied by the Karegnondi Water Authority) and to optimize corrosion control for the Flint system, starting in 2016.

"EPA is committed to working with our state and local partners to ensure a safe and reliable water supply for the residents of Flint, Michigan," said Susan Hedman, EPA Region 5 Administrator. "The formation of this task force continues our commitment to providing the necessary level of technical assistance to assist Flint and the state of Michigan."

The Task Force will be comprised of scientists and technical experts from EPA Region 5 and EPA Headquarters. Offices represented include the Office of Research and Development, Office of Water Lead and Copper Rule, Office of Water. In addition, EPA will ask the Governor to designate a MDEQ official and the Mayor of Flint to designate an official from the city.

From: Poy, Thomas
Sent: Thur 10/15/2015 3:54:39 PM
Subject: Flint Update

Tinka: Here is an Flint update.

- The transmission line between Detroit and Flint has been disinfected. They are required to take 2 Total Coliform samples. The first one is fine. Awaiting results of the second.

- Additional orthophosphate will be added by Flint and not Detroit.

- Additional orthophosphate will likely have an impact of Flint's wastewater discharge wrt phosphorus.

- GWDWB and ORD are working with MDEQ on their protocol for additional sampling at schools.

- The Michigan House unanimously passed a bill providing $9.3M for the Flint DW crisis.

o $6M for the reconnection to Detroit.

o 300,000 to MDEQ to hire two workers for home and school drinking water inspections.

o $1 million for lab services to test water samples.

o $1 million to buy water filters for residents.

o $850,000 to screen for lead, coordinate follow-up care for children with elevated blood lead levels, and do related outreach.

o $200,000 for legally required inspections of plumbing fixtures and systems inside schools and health facilities.

CHICAGO- Today EPA Region 5 Administrator Susan Hedman established the Flint Safe Drinking Water Task Force to provide the Agency’s technical expertise through regular, but no less than weekly, conversations with designated officials from Michigan Department of Environmental Quality (MDEQ) and the City of Flint. The Task Force will assist with developing and implementing a plan to secure water quality, including measures to optimize corrosion control. Task Force members will be available to consult with MDEQ and the City of Flint on site in Flint as needed. The Task Force will also coordinate as necessary with federal, state and local public health agencies to assist with protection of public health.

Specifically, the Task Force will provide technical assistance to the MDEQ and the City of Flint to reconnect the Flint system to a new source of drinking water (to be supplied by the Great Lakes Water Authority) and to optimize corrosion control for the Flint system, starting in October 2015. The Task Force will also provide technical assistance to the MDEQ and the City of Flint, as needed, in advance of and following connection of the Flint water system to a new source of drinking water (to be supplied by the Karegnondi Water Authority) and to optimize corrosion control for the Flint system, starting in 2016.

“EPA is committed to working with our state and local partners to ensure a safe and reliable water supply for the residents of Flint, Michigan,” said Susan Hedman, EPA Region 5 Administrator. “The formation of this task force continues our commitment to providing the necessary level of technical assistance to assist Flint and the state of Michigan.”

The Task Force will be comprised of scientists and technical experts from EPA Region 5 and EPA Headquarters. Offices represented include the Office of Research and Development, Office of Water Lead and Copper Rule, Office of Water. In addition, EPA will ask the Governor to designate a MDEQ official and the Mayor of Flint to designate an official from the city.

Subject: Re: Draft Flint Task Force press release-please review

Thanks Susan, Melissa and Nichole.

I suggest we modify the language that says that the task force will be available on site in Flint as needed. I'd recommend that we delete the phrase "as needed" so we make clear that we will be in Flint, but we don't give the impression that we will be there in person for every meeting that occurs.

The text in the last paragraph should be edited as follows:

> The Task Force will be comprised of scientists and technical experts from EPA Region 5 and EPA Headquarters. Headquarters Offices represented include the Office of Research and Development and the Office of Ground Water and Drinking Water. In addition, EPA will ask the Governor to designate a MDEQ official and the Mayor of Flint to designate an official from the city.

October XX, 2015

EPA Establishes Safe Drinking Water Task Force to Provide Technical Expertise to MDEQ and City of Flint

Task Force providing technical assistance on reconnecting the Flint drinking water system to a new source

CHICAGO- Today EPA Region 5 Administrator Susan Hedman established the Flint Safe Drinking Water Task Force to provide the Agency's technical expertise through regular, conversations with designated officials from Michigan Department of Environmental Quality (MDEQ) and the City of Flint. The Task Force will be led by the Region 5 Deputy Regional Administrator and will assist with developing and implementing a plan to secure water quality, including measures to optimize corrosion control. Task Force members will be available to consult with MDEQ and the City of Flint on site in Flint. The Task Force will also coordinate as necessary with federal, state and local public health agencies to assist with protection of public health.

Specifically, the Task Force will provide technical assistance to the MDEQ and the City of Flint to reconnect the Flint system to a new source of drinking water (to be supplied by the Great Lakes Water Authority) and to optimize corrosion control for the Flint system, starting in October 2015. The Task Force will also provide technical assistance to the MDEQ and the City of Flint, as needed, in advance of and following connection of the Flint water system to a new source of drinking water (to be supplied by the Karegnondi Water Authority) and to optimize corrosion control for the Flint system, starting in 2016.

"EPA is committed to working with our state and local partners to ensure a safe and reliable drinking water supply for the residents of Flint, Michigan," said Susan Hedman, EPA Region 5 Administrator. "The formation of this task force continues our commitment to providing technical assistance to assist the City of Flint and the State of Michigan."

The Task Force will be comprised of scientists and technical experts from the EPA Region 5 office in Chicago, the National Risk Management Research Lab in Cincinnati and the EPA drinking water program. In addition, EPA will ask the Governor to designate a MDEQ official and the Mayor of Flint to designate a city official, to serve as points of contact for the Task Force.

At 10 am, please e-mail a copy of the final press release from my e-mail address to Dan Wyant (cc-ing MaryBeth) with the following note:

Hi Dan --

We will be issuing the attached press release in about 30 minutes -- it describes the Task Force that we discussed yesterday. If you would like to talk further, I will be available this afternoon.

Thanks,

Susan

Also -- at 10 am, please e-mail a copy of the final press release from my e-mail address to Mayor Walling (dwalling@cityofflint.com) with the following note:

Hi Mayor Walling--

We will be issuing the attached press release in about 30 minutes -- it describes the Task Force that we discussed yesterday. If you would like to talk further, I will be available this afternoon.

Thanks,

Susan

FOR IMMEDIATE RELEASE

October XX, 2015

EPA Establishes Safe Drinking Water Task Force to Provide Technical Expertise to MDEQ and City of Flint

Task Force providing technical assistance on reconnecting the Flint drinking water system to a new source

CHICAGO- Today EPA Region 5 Administrator Susan Hedman established the Flint Safe Drinking Water Task Force to provide the Agency's technical expertise through regular, conversations with designated officials from Michigan Department of Environmental Quality (MDEQ) and the City of Flint. The Task Force will be led by the Region 5 Deputy Regional Administrator and will assist with developing and implementing a plan to secure water quality, including measures to optimize corrosion control. Task Force members will be available to consult with MDEQ and the City of Flint on site in Flint. The Task Force will also coordinate as necessary with federal, state and local public health agencies to assist with protection of public health.

Specifically, the Task Force will provide technical assistance to the MDEQ and the City of Flint to reconnect the Flint system to a new source of drinking water (to be supplied by the Great Lakes Water Authority) and to optimize corrosion control for the Flint system, starting in October 2015. The Task Force will also provide technical assistance to the MDEQ and the City of Flint, as needed, in advance of and following connection of the Flint water system to a new source of drinking water (to be supplied by the Karegnondi Water Authority) and to optimize corrosion control for the Flint system, starting in 2016.

“EPA is committed to working with our state and local partners to ensure a safe and reliable drinking water supply for the residents of Flint, Michigan,” said Susan Hedman, EPA Region 5 Administrator. “The formation of this task force continues our commitment to providing technical assistance to assist the City of Flint and the State of Michigan.”

The Task Force will be comprised of scientists and technical experts from the EPA Region 5 office in Chicago, the National Risk Management Research Lab in Cincinnati and the EPA drinking water program. In addition, EPA will ask the Governor to designate a MDEQ official and the Mayor of Flint to designate a city official, to serve as points of contact for the Task Force.

EPA Establishes Safe Drinking Water Task Force to Provide Technical Expertise to MDEQ and City of Flint

Task Force providing technical assistance on reconnecting the Flint drinking water system to a new source

CHICAGO- Today EPA Region 5 Administrator Susan Hedman established the Flint Safe Drinking Water Task Force to provide the Agency's technical expertise through regular, conversations with designated officials from Michigan Department of Environmental Quality (MDEQ) and the City of Flint. The Task Force will be led by the Region 5 Deputy Regional Administrator and will assist with developing and implementing a plan to secure water quality, including measures to optimize corrosion control. Task Force members will be available to consult with MDEQ and the City of Flint on site in Flint. The Task Force will also coordinate as necessary with federal, state and local public health agencies to assist with protection of public health.

Specifically, the Task Force will provide technical assistance to the MDEQ and the City of Flint to reconnect the Flint system to a new source of drinking water (to be supplied by the Great Lakes Water Authority) and to optimize corrosion control for the Flint system, starting in October 2015. The Task Force will also provide technical assistance to the MDEQ and the City of Flint, as needed, in advance of and following connection of the Flint water system to a new source of drinking water (to be supplied by the Karegnondi Water Authority) and to optimize corrosion control for the Flint system, starting in 2016.

"EPA is committed to working with our state and local partners to ensure a safe and reliable drinking water supply for the residents of Flint, Michigan," said Susan Hedman, EPA Region 5 Administrator. "The formation of this task force continues our commitment to providing technical assistance to assist the City of Flint and the State of Michigan."

The Task Force will be comprised of scientists and technical experts from the EPA Region 5 office in Chicago, the National Risk Management Research Lab in Cincinnati and the EPA drinking water program. In addition, EPA will ask the Governor to designate a MDEQ official and the Mayor of Flint to designate a city official, to serve as points of contact for the Task Force.

Subject: Re: Draft Flint Task Force press release-please review

Thanks Susan, Melissa and Nichole.

I suggest we modify the language that says that the task force will be available on site in Flint as needed. I'd recommend that we delete the phrase "as needed" so we make clear that we will be in Flint, but we don't give the impression that we will be there in person for every meeting that occurs.

The text in the last paragraph should be edited as follows:

> > The Task Force will be comprised of scientists and technical experts from EPA Region 5 and EPA Headquarters. Headquarters Offices represented include the Office of Research and Development and the Office of Ground Water and Drinking Water. In addition, EPA will ask the Governor to designate a MDEQ official and the Mayor of Flint to designate an official from the city.

EPA Establishes Flint Safe Drinking Water Task Force

Task Force to Provide Agency's Technical Expertise to MDEQ and City of Flint

CHICAGO- Today EPA Region 5 Administrator Susan Hedman established the Flint Safe Drinking Water Task Force to provide the Agency's technical expertise through regular, but no less than weekly, conversations with designated officials from Michigan Department of Environmental Quality (MDEQ) and the City of Flint. The Task Force will assist with developing and implementing a plan to secure water quality, including measures to optimize corrosion control. Task Force members will be available to consult with MDEQ and the City of Flint on site in Flint as needed. The Task Force will also coordinate as necessary with federal, state and local public health agencies to assist with protection of public health.

Specifically, the Task Force will provide technical assistance to the MDEQ and the City of Flint to reconnect the Flint system to a new source of drinking water (to be supplied by the Great Lakes Water Authority) and to optimize corrosion control for the Flint system, starting in October 2015. The Task Force will also provide technical assistance to the MDEQ and the City of Flint, as needed, in advance of and following connection of the Flint water system to a new source of drinking water (to be supplied by the Karegnondi Water Authority) and to optimize corrosion control for the Flint system, starting in 2016.

"EPA is committed to working with our state and local partners to ensure a safe and reliable water supply for the residents of Flint, Michigan," said Susan Hedman, EPA Region 5 Administrator. "The formation of this task force continues our commitment to providing the necessary level of technical assistance to assist Flint and the state of Michigan."

The Task Force will be comprised of scientists and technical experts from EPA Region 5 and EPA Headquarters. Offices represented include the Office of Research and Development, Office of Water Lead and Copper Rule, Office of Water. In addition, EPA will ask the Governor to designate a MDEQ official and the Mayor of Flint to designate an official from the city.

EPA Establishes Flint Safe Drinking Water Task Force

Task Force to Provide Agency's Technical Expertise to MDEQ and City of Flint

CHICAGO- Today EPA Region 5 Administrator Susan Hedman established the Flint Safe Drinking Water Task Force to provide the Agency's technical expertise through regular, but no less than weekly, conversations with designated officials from Michigan Department of Environmental Quality (MDEQ) and the City of Flint. The Task Force will assist with developing and implementing a plan to secure water quality, including measures to optimize corrosion control. Task Force members will be available to consult with MDEQ and the City of Flint on site in Flint as needed. The Task Force will also coordinate as necessary with federal, state and local public health agencies to assist with protection of public health.

Specifically, the Task Force will provide technical assistance to the MDEQ and the City of Flint to reconnect the Flint system to a new source of drinking water (to be supplied by the Great Lakes Water Authority) and to optimize corrosion control for the Flint system, starting in October 2015. The Task Force will also provide technical assistance to the MDEQ and the City of Flint, as needed, in advance of and following connection of the Flint water system to a new source of drinking water (to be supplied by the Karegnondi Water Authority) and to optimize corrosion control for the Flint system, starting in 2016.

“EPA is committed to working with our state and local partners to ensure a safe and reliable water supply for the residents of Flint, Michigan,” said Susan Hedman, EPA Region 5 Administrator. “The formation of this task force continues our commitment to providing the necessary level of technical assistance to assist Flint and the state of Michigan.”

The Task Force will be comprised of scientists and technical experts from EPA Region 5 and EPA Headquarters. Offices represented include the Office of Research and Development, Office of Water Lead and Copper Rule, Office of Water. In addition, EPA will ask the Governor to designate a MDEQ official and the Mayor of Flint to designate an official from the city.

EPA Establishes Safe Drinking Water Task Force to Provide Technical Expertise to MDEQ and City of Flint

Task Force providing technical assistance on reconnecting the Flint drinking water system to a new source

CHICAGO- Today EPA Region 5 Administrator Susan Hedman established the Flint Safe Drinking Water Task Force to provide the Agency's technical expertise through regular, conversations with designated officials from Michigan Department of Environmental Quality (MDEQ) and the City of Flint. The Task Force will be led by the Region 5 Deputy Regional Administrator and will assist with developing and implementing a plan to secure water quality, including measures to optimize corrosion control. Task Force members will be available to consult with MDEQ and the City of Flint on site in Flint. The Task Force will also coordinate as necessary with federal, state and local public health agencies to assist with protection of public health.

Specifically, the Task Force will provide technical assistance to the MDEQ and the City of Flint to reconnect the Flint system to a new source of drinking water (to be supplied by the

Great Lakes Water Authority) and to optimize corrosion control for the Flint system, starting in October 2015. The Task Force will also provide technical assistance to the MDEQ and the City of Flint, as needed, in advance of and following connection of the Flint water system to a new source of drinking water (to be supplied by the Karegnondi Water Authority) and to optimize corrosion control for the Flint system, starting in 2016.

“EPA is committed to working with our state and local partners to ensure a safe and reliable drinking water supply for the residents of Flint, Michigan,” said Susan Hedman, EPA Region 5 Administrator. “The formation of this task force continues our commitment to providing technical assistance to assist the City of Flint and the State of Michigan.”

The Task Force will be comprised of scientists and technical experts from the EPA Region 5 office in Chicago, the National Risk Management Research Lab in Cincinnati and the EPA drinking water program. In addition, EPA will ask the Governor to designate a MDEQ official and the Mayor of Flint to designate a city official, to serve as points of contact for the Task Force.

At 10 am, please e-mail a copy of the final press release from my e-mail address to Dan Wyant (cc-ing MaryBeth) with the following note:

Hi Dan --

We will be issuing the attached press release in about 30 minutes -- it describes the Task Force that we discussed yesterday. If you would like to talk further, I will be available this afternoon.

Thanks,

Susan

Also -- at 10 am, please e-mail a copy of the final press release from my e-mail address to Mayor Walling (dwalling@cityofflint.com) with the following note:

Hi Mayor Walling--

We will be issuing the attached press release in about 30 minutes -- it describes the Task Force that we discussed yesterday. If you would like to talk further, I will be available this afternoon.

Thanks,

Susan

State's $6M aid for Flint water switch signed into law

Michigan Governor OKs $9.3M to End Flint Water Crisis

Michigan Gov. Rick Snyder signs spending bill with $9.35M for Flint water crisis

Senate approves, Snyder signs cash for Flint water fix

For the record: Water crisis in Flint, Michigan, an obscene failure of government

---

http://www.detroitnews.com/story/news/politics/2015/10/15/flint-get-aid-switch-drinking-water/73986956/

Staff and wire reports 11:44 a.m. EDT October 15, 2015

Lansing — The city of Flint will receive $6 million in state aid to help temporarily switch its drinking water source back to Detroit after the discovery of lead contamination and other problems.

Gov. Rick Snyder signed into law Thursday nearly $9.4 million in aid Thursday that includes money for water filters, inspections, lab testing and payment to reconnect Flint temporarily to the Detroit water system until its own pipeline to Lake Huron is completed.

The legislation was approved by the Senate Thursday morning in a 37-0 vote after the House quickly passed it Wednesday evening.

“This funding is a coordinated response to a serious problem, and I’m pleased so many parties came together to help deliver safe drinking water to the city of Flint,” Snyder said in a statement. “Reconnecting to the Great Lakes Water Authority is only the first step, as the state will continue testing and inspections to ensure Flint families and children have clean water in their homes and schools.”

The Legislature moved quickly after the Republican governor backed the reconnection to Detroit and the other aid on Friday. Senate Minority Leader Jim Ananich, D-Flint, thanked his colleagues in the Republican-controlled chamber Thursday for moving so quickly on a matter of public health for the city he represents.

The appropriation was approved without partisan finger-pointing, something that has happened off the floor of the state Capitol. Michigan Democratic Party Chairman Brandon Dillon has accused the Snyder administration of putting the health and safety of a city “at risk in order to prove that Republican, corporate-style governing works. Clearly, when you have to spend millions of taxpayer dollars to fix your mistakes, it does not.”

The Michigan Department of Environmental Quality has argued that testing of city water for many months showed water quality was still within federal safety levels. But the administration changed its mind last week when it confirmed findings by the Hurley Medical Center that lead levels in Flint children jumped dramatically after the switch to the corrosive Flint River.

Flint will provide $2 million and the Charles Stewart Mott Foundation has promised to provide $4 million. Returning to Detroit will cost $12 million through June.

Flint stopped getting its water from Detroit’s system last year and switched to the Flint River in a cost-cutting move. But the city has had trouble with water from the Flint River.

The state corroborated findings of elevated lead levels in children and disclosed higher levels in three Flint schools. Residents have complained about the safety, smell, taste and appearance of the water.

http://abcnews.go.com/Politics/wireStory/michigan-legislature-agrees-93m-end-flint-water-crisis-34496930

By david eggert, associated press

LANSING, Mich. — Oct 15, 2015, 5:43 PM ET A Michigan city will receive $6 million in state funding to help switch its drinking water source after lead problems prompted officials to declare a public health emergency.

Gov. Rick Snyder on Thursday quickly approved $9.3 million in aid to address Flint's water crisis after the Legislature finalized a bill earlier in the day. It also includes money for home water filters, inspections, health services and lab testing.

The 99,000-resident city stopped getting its water from Detroit's system last year in a cost-cutting move while under state emergency management but has had trouble with water from the Flint River. It was supposed to be an interim supply source until the city can join a new system scheduled to be completed next year.

The state corroborated findings of elevated lead levels in children and disclosed higher lead amounts in three Flint schools. Residents also have complained about the smell, taste and appearance of the water.

Returning to Detroit's system will cost $12 million through June. Flint will pay $2 million, and the Charles Stewart Mott Foundation has pledged $4 million.

"Reconnecting to the Great Lakes Water Authority is only the first step, as the state will continue testing and inspections to ensure Flint families and children have clean water in their homes and schools," Snyder said in a statement.

The Flint River is more corrosive than Detroit's water from Lake Huron and, because controls were not implemented, the river water picked up lead from aging pipes that connect water mains to houses and businesses.

Lead, a metal that can cause developmental delays and learning disabilities, is just the latest issue since Flint changed its water supply in April 2014. There have been high levels of a disinfectant byproduct. Increased bacteria levels forced boil-water advisories.

"Unanimous support in both chambers to secure resources is heartening," said Senate Minority Leader Jim Ananich, D-Flint. "This is an important and necessary step to fix the current crisis."

LANSING, MI — Michigan Gov. Rick Snyder on Thursday signed a supplemental spending bill that includes $9.35 million to address a public health crisis in Flint linked to high lead levels in drinking water.

The governor wasted little time with the bill, signing it just hours after it had won unanimous approval in the Senate and one day after unanimous approval in the House.

"This funding is a coordinated response to a serious problem and I'm pleased so many parties came together to help deliver safe drinking water to the city of Flint," Snyder said in a statement.

The bulk of the funding — $6 million — will help Flint reconnect to Detroit water until a new Lake Huron pipeline is complete. The Charles Stewart Mott Foundation has committed another $4 million, and the cash-strapped city is paying the remaining $2 million.

"Reconnecting to the Great Lakes Water Authority is only the first step, as the state will continue testing and inspections to ensure Flint families and children have clean water in their homes and schools," the governor said.

Flint, operating under a state-appointed emergency manager at the time, began supplying residents with Flint River water in April of 2014. Scientists have since discovered elevated lead levels in drinking water and the blood of children.

The river water has been blamed for exacerbating corrosion in aging pipes, and toxic lead levels have been detected in drinking water in three Flint schools, according to state officials.

The spending proposal would appropriate $1 million to Michigan Department of Environmental Quality for laboratory analysis of drinking water samples in Flint. Another $1 million would cover the costs of water filters provided to Flint residents.

The bill includes $850,000 to fund additional state and local services in the city, such as screening for abnormal blood lead levels, lead hazard identification and follow-up care for affected children.

Another $300,000 would help fund home and school water connections in Flint, and $200,000 would support plumbing inspections in educational and health facilities.

Of the $9.35 million appropriation to benefit Flint, $7.15 million would come out of the state's general fund, while $2.2 million would come from other restricted sources, including an available balance in a DEQ settlement fund.

Flint Mayor Dayne Walling, in a statement released earlier Thursday, had thanked the Legislature for taking "swift and decisive" action for Flint residents.

"We can now move to secure a reconnection to Detroit and provide Lake Huron water until the KWA pipeline can be completed next year," he said.

State Sen. Jim Ananich, a Flint Democrat who worked with Snyder to secure the funding, said he was grateful to his colleagues for approving the plan but frustrated that it took legislative action to ensure safe, clean drinking water for city residents.

"Today's vote was a necessary fix to a problem that never should have happened," he said in a statement.

Flint plans to switch off of Detroit water and join a regional authority building the new pipeline were put in motion before Snyder appointed an emergency financial manager to run the city.

But there is no record that Flint City Council voted to use the river as a short-term drinking water source, according to The Flint Journal, and those contracts were ultimately signed by emergency managers.

"As we move forward, I am committed to finding out how, in 2015, an entire city was poisoned by its own drinking water," Ananich said. "A simple report will not cover it. We need to know who knew what, when they knew it, and what, if anything, they did to fix it."

---

http://www.freep.com/story/news/local/michigan/2015/10/15/senate-gives-quick-unanimous-approval-flint-water-fix/73979168/

By Kathleen Gray, Detroit Free Press Lansing Bureau 9:02 p.m. EDT October 15, 2015

LANSING — Residents of Flint got another step closer to cleaner water Thursday when Gov. Rick Snyder signed a bill sending $9.35 million to help the beleaguered city reconnect to the Detroit water and sewer system.

The state Senate voted 37-0 Thursday to approve the funds after the House of Representatives unanimously approved the same appropriation Wednesday night. Snyder said Thursday that the swift action by the Legislature was only the first step in dealing with the water crisis.

"The state will continue testing and inspections to ensure Flint families and children have clean water in their homes and schools," he said in a statement.

Sen. David Hilldenbrand, R-Lowell, the chairman of the Senate Appropriations Committee, urged his colleagues to support the measure "to address the public health crisis in the city of Flint."

And Sen. Jim Ananich, D-Flint, said the passage of the money for Flint doesn't end the controversy.

"This is an important step necessary to fix the current crisis.And once this is complete, it's important that our next priority is getting to the bottom of how this happened," he said. "We need to make sure this never happens again."

For the record: Water crisis in Flint, Michigan, an obscene failure of government

http://www.wisconsingazette.com/opinion/for-the-record-water-crisis-in-flint-michigan-an-obscene-failure-of-government.html

Opinion Published in Wisconsin Gazette - Written by The Detroit Free Press
Thursday, 15 October 2015 22:49

There's good news: The City of Flint, Michigan, ould soon reconnect to the Detroit Water and Sewer Department, a water source that doesn't leach lead from aging pipes into the municipal water supply.

And there's bad news: Three Flint elementary schools have water with lead levels more than 15 parts per billion, which is the limit according to U.S. Environmental Protection Agency guidelines. At one school, Freeman Elementary, water tests found lead levels of 101 ppb. Add this to months of data showing elevated lead levels in homes across Flint, and a higher percentage of children with elevated blood-lead levels.

Lead poisoning causes behavioural and developmental problems in children. It is irreversible. Pregnant women and children are most vulnerable. The U.S. Centers for Disease Control and Prevention say there is no acceptable level of lead exposure.

And in at least three Flint schools, children have been drinking lead-contaminated water for up to 16 months.

Sixteen months, as Flint residents told the state again and again that their water wasn't right. Sixteen months, as independent researchers meticulously documented rising lead levels in water and in the blood of Flint children. Sixteen months, as the state worked to disparage and discredit the work of respected scientists, even as its own data supported those findings.

At a press conference, Gov. Rick Snyder appeared chastened.

He should.

Snyder appoints the head of the Michigan Department of Environmental Quality, the agency charged with ensuring that drinking water throughout our state is safe.

In Flint, it failed.

Flint's decisions first to join a new regional water authority, and then to pump water from the Flint River _ ending a decades-long relationship with Detroit's system — were made while Flint was under state oversight, during the tenure of a Snyder-appointed emergency manager charged with balancing Flint's budget. That system is justified by the governor's constitutional responsibility to attend to the health and wellness of all Michiganders.

In Flint, he failed.

This newspaper twice endorsed Snyder for governor, albeit with grave reservations. But because of the relative weakness of his opponents, the leadership he displayed in resolving Detroit's protracted financial crisis and our hope that he would use his business acumen to ensure that government better served people, he narrowly won our endorsement.

Last year, in a detailed analysis of Snyder's record, this editorial board expressed our dissatisfaction about Snyder's first term: ``The governor balanced the budget at the expense of cities and school districts. His disdain for politics is inappropriate in the state's chief politician; his deficiencies as a deal-maker have sometimes resulted in terrible consequences for Michiganders."

This, we wrote, was Snyder's most profound flaw: ``He has got to see people, not sums, as the bottom line of the state balance sheet."

We wrote that he rarely exhibited strong, decisive leadership, that he must ``grow into a more sure-footed, principled leader." That we were fearful of what Snyder's second term could hold.

Snyder defended the state's decisions, saying it had followed EPA and MDEQ testing protocols. The state did the minimum required, his responses implied. Why should it have to do more?

This is what Snyder does not understand. To lead a state, accountancy is not sufficient. To lead a state, a balanced budget is not sufficient. To lead a state, doing only what is required is not sufficient.

The modern vogue for paring services and cutting budgets is an insidious misunderstanding of the foundations of government. Fiscal conservationism is correct to suggest that government should recognize the value of a dollar. But it is absolutely incorrect when it considers the value of a dollar more significant than other values. A dollar saved at the expense of public safety. A dollar saved at the expense of Flint's children. A dollar saved at the expense of the public trust. These are equations that can never balance.

At this math, Snyder has consistently failed.

When Flint began to pump river water, it opted not to add a chemical that would have created a film inside its aging service pipes, preventing lead from entering the water. MDEQ signed off on that plan. Snyder's representatives have said both decisions were in progress before Flint's emergency managers were appointed, belying the reality of an emergency manager's broad authority in the city he or she is charged to lead.

That Flint has aging service lines with lead materials shouldn't have been a surprise. That Flint would need to treat the water it pumped to ensure it could flow safely through those lines shouldn't have been at issue.

Here is all we can surmise: Pumping Flint River water saved money. And that, as they say, was that.

Snyder says that his team will issue an ``after action report,'' with recommendations about how things could have been done differently. This is a necessary step and should be conducted by a team with sufficient independence from Snyder's office _ and the MDEQ _ to reach impartial conclusions.

Snyder has asked the Michigan Legislature to contribute $6 million of the $12 million it will cost Flint to purchase its water from Detroit. The Charles Stewart Mott Foundation and the city itself will cover the remaining costs. The transition could be complete within two weeks. We applaud the Mott Foundation for its contribution and urge the Legislature to approve its portion of the funds required without delay.

Snyder and other officials have said Flint will continue to work to replace lead service lines. This is necessary work. The state has devoted $1 million to pay for water filters for Flint residents, another helpful measure.

People. Not sums.

Thus endeth the lesson. It is one our government should not forget. It is one Flint's children can't forget.

EPA creates task force to help Flint's water system

Jim Lynch, The Detroit News*12:27 p.m. EDT October 16, 2015*

Flint's move to reconnect to the Detroit Water and Sewerage Department will get a boost from U.S. Environmental Protection Agency experts.

The federal agency announced Friday it has created a Flint Safe Drinking Water Task Force that will work with both city officials and Michigan's Department of Environmental Quality. In addition to helping facilitate a reconnection to the Detroit water system, EPA experts will also consult on corrosion control efforts to ensure the water arriving in Flint homes does not contain dangerous levels of lead.

"EPA is committed to working with our state and local partners to ensure a safe and reliable drinking water supply for the residents of Flint, Michigan," said Susan Headman, EPA's Region 5 administrator, in a press release Friday. "The formation of this task force continues our commitment to providing technical assistance to the City of Flint and the State of Michigan."

The announcement comes on the heels of several tumultuous weeks for Flint residents. In September, local health officials released findings showing high levels of lead exposure among the city's children.

An analysis conducted by a Hurley Medical Center researcher in Flint showed that in some areas lead levels in children's blood doubled and, in two local ZIP codes, they tripled.

In an attempt to save money, the city began using the Flint River as its water source in the spring of 2014. The decision was made under the leadership of an emergency manager appointed by Gov. Rick Snyder's administration.

Escalating problems with the water caused state and city officials to opt for reconnecting to the Detroit water system, the previous supplier of Flint's drinking water, which uses Lake Superior as its source. The reconnection to Detroit is a temporary measure until Flint can finish the construction of its own pipeline to Lake Huron for a regional water authority.

Task Force to Provide Technical Expertise to MDEQ and City of Flint

Task Force providing technical assistance on reconnecting the Flint drinking water system to a new source

CHICAGO- Today EPA Region 5 Administrator Susan Hedman established the Flint Safe Drinking Water Task Force to provide the Agency's technical expertise through regular, conversations with designated officials from Michigan Department of Environmental Quality (MDEQ) and the City of Flint. The Task Force will be led by the Region 5 Deputy Regional Administrator and will assist with developing and implementing a plan to secure water quality, including measures to optimize corrosion control. Task Force members will be available to consult with MDEQ and the City of Flint on site in Flint. The Task Force will also coordinate as necessary with federal, state and local public health agencies to assist with protection of public health.

Specifically, the Task Force will provide technical assistance to the MDEQ and the City of Flint to reconnect the Flint system to a new source of drinking water (to be supplied by the Great Lakes Water Authority) and to optimize corrosion control for the Flint system, starting in October 2015. The Task Force will also provide technical assistance to the MDEQ and the City of Flint, as needed, in advance of and following connection of the Flint water system to a new source of drinking water (to be supplied by the Karegnondi Water Authority) and to optimize corrosion control for the Flint system, starting in 2016.

"EPA is committed to working with our state and local partners to ensure a safe and reliable drinking water supply for the residents of Flint, Michigan," said Susan Hedman, EPA Region 5 Administrator. "The formation of this task force continues our commitment to providing technical assistance to assist the City of Flint and the State of Michigan."

The Task Force will be comprised of scientists and technical experts from the EPA Region 5 office in Chicago, the National Risk Management Research Lab in Cincinnati and the EPA drinking water program. In addition, EPA will ask the Governor to designate a MDEQ official and the Mayor of Flint to designate a city official, to serve as points of contact for the Task Force.

EPA creates task force to help Flint's water system

Jim Lynch, The Detroit News*12:27 p.m. EDT October 16, 2015*

Flint's move to reconnect to the Detroit Water and Sewerage Department will get a boost from U.S. Environmental Protection Agency experts.

The federal agency announced Friday it has created a Flint Safe Drinking Water Task Force that will work with both city officials and Michigan's Department of Environmental Quality. In addition to helping facilitate a reconnection to the Detroit water system, EPA experts will also consult on corrosion control efforts to ensure the water arriving in Flint homes does not contain dangerous levels of lead.

“EPA is committed to working with our state and local partners to ensure a safe and reliable drinking water supply for the residents of Flint, Michigan,” said Susan Headman, EPA’s Region 5 administrator, in a press release Friday. “The formation of this task force continues our commitment to providing technical assistance to the City of Flint and the State of Michigan.”

The announcement comes on the heels of several tumultuous weeks for Flint residents. In September, local health officials released findings showing high levels of lead exposure among the city’s children.

An analysis conducted by a Hurley Medical Center researcher in Flint showed that in some areas lead levels in children’s blood doubled and, in two local ZIP codes, they tripled.

In an attempt to save money, the city began using the Flint River as its water source in the spring of 2014. The decision was made under the leadership of an emergency manager appointed by Gov. Rick Snyder’s administration.

Escalating problems with the water caused state and city officials to opt for reconnecting to the Detroit water system, the previous supplier of Flint’s drinking water, which uses Lake Superior as its source. The reconnection to Detroit is a temporary measure until Flint can finish the construction of its own pipeline to Lake Huron for a regional water authority.

By Associated Press Friday, October 16th 2015

FLINT (AP) — The U.S. Environmental Protection Agency has established a task force to help Flint switch its drinking water source after lead problems prompted officials to declare a public health emergency.

The Flint Safe Drinking Water Task Force announced Friday will provide technical advice.

Task force members will be available to consult with Michigan Department of Environmental Quality and Flint on site. The task force will also coordinate as necessary with federal, state and local public health agencies to assist with protection of public health.

Word of the task force comes after Gov. Rick Snyder on Thursday approved $9.3 million in aid to address Flint's water crisis.

The city stopped getting its water from Detroit's system last year in a cost-cutting move, but has had trouble with water from the Flint River.

WASHINGTON — The Environmental Protection Agency said Friday it will provide technical assistance to get Flint reconnected to Detroit’s water and sewer system and help ensure safe drinking water for residents.

In Chicago, the EPA’s regional administrator, Susan Hedman, also said the agency will work to improve corrosion control in Flint’s water lines and help it connect to the Karegnondi Water Authority as planned next year.

The announcement from the U.S. Environmental Protection Agency comes a day after Gov. Rick Snyder signed a bill authorizing $9.35 million to help Flint reconnect to the Detroit system. That came, in turn, in the wake of reports that water being pulled from the Flint River was making residents sick.

DETROIT FREE PRESS

Senate approves, Snyder signs cash for Flint water fix

Flint cancelled its contract with the Detroit water system a year ago, saying water costs were too high. Local officials planned to connect with the Karegnondi system, but its facilities were not expected to be ready for Flint until sometime next year. In the meantime, Flint started pulling water from the Flint River, sparking complaints that the water was discolored and foul-smelling.

A Flint pediatrician also said the number of local children with elevated blood-lead levels had jumped, which helped prompt Genesee County officials to warn local residents not to drink city water unless it was treated with a filtration device or otherwise shown not to contain elevated lead levels.

Flint doctor makes state see light about lead in water

The EPA's Hedman said the Flint Safe Drinking Water Task Force will be in touch regularly with local and state officials to "assist with developing and implementing a plan to secure water quality, including measures to optimize corrosion control."

The task force will include, among others, scientists and technical experts from the EPA's Region 5 office in Chicago, the National Risk Management Research Lab in Cincinnati and the EPA's nationwide drinking water program.

U.S. Rep. Dan Kildee, D-Flint Township, said the announcement by the EPA was the "result of letters and phone calls over the past week" between his office and EPA Administrator Gina McCarthy and other officials.

"I am pleased to see that within a week the EPA has responded positively to my request and I'm hopeful that this announcement is a step forward for the future of Flint's water," said Kildee.

U.S. Sen. Gary Peters, D-Mich., also said the EPA's response it is a good step toward helping Flint solve its water problem.

"The increased lead levels found in the Flint water system are simply unacceptable," said Peters, who also added that he raised the issue with McCarthy. "All levels of government need to work together to prevent this type of situation from ever happening again."

In Lansing, Senate Minority Leader Jim Ananich, D-Flint, said while he's looking forward to working with the EPA to solve any problems he also wants the agency "to help us determine what happened and provide us with a solid oversight framework going forward. It's crucial that we take steps to ensure this never happens again."

Steve Carmody / Michigan Radio/2:45 p.m. CDT

A federal task force will help the city of Flint with its drinking water problems.

Flint residents have been installing filters and drinking bottled water as problems mount with the city's water system

The U.S. Environmental Protection Agency has been criticized for not being more involved in solving Flint's water crisis.

Now the EPA is forming a special task force to provide “technical expertise” to the city and the state Department of Environmental Quality as
Flint returns to Detroit water and eventually transitions to a new pipeline going online next year.

“EPA is committed to working with our state and local partners to ensure a safe and reliable drinking water supply for the residents of Flint, Michigan,” says Susan Hedman, administrator of U.S. Environmental Protection Agency Region 5.

U.S. Senator Gary Peters, D-Mich., welcomed the announcement of the EPA's new Flint Safe Drinking Water Task Force.

“All Michiganders deserve access to safe and clean drinking water, and the increased lead levels found in the Flint water system are simply unacceptable,” says Peters.

Problems have been mounting since Flint started using its namesake river as the city's drinking water source a year and a half ago.

This week, the state and city of Flint approved spending millions of dollars to pay for water from Detroit. A local foundation is also chipping in money.

---

http://detroit.cbslocal.com/2015/10/16/epa-establishes-task-force-to-help-flint-switch-water-source/

CBS Detroit/Associated Press

FLINT, Mich. (AP) – The U.S. Environmental Protection Agency has established a task force to help Flint switch its drinking water source after lead problems prompted officials to declare a public health emergency.

The Flint Safe Drinking Water Task Force announced Friday will provide technical advice.

Task force members will be available to consult with Michigan Department of Environmental Quality and Flint on site. The task force will also coordinate as necessary with federal, state and local public health agencies to assist with protection of public health.

Word of the task force comes after Gov. Rick Snyder on Thursday approved $9.3 million in aid to address Flint's water crisis.

The city stopped getting its water from Detroit's system last year in a cost-cutting move, but has had trouble with water from the Flint River.

By Jamie Valentine, Producer, 9&10 News Northern Michigan

Continuing coverage on the water emergency in Flint.

A task force has now been established to help Flint switch its drinking water source.

Lead problems forced officials to declare a public health emergency.

The EPA has formed the Flint Safe Drinking Water Task Force.

The team will provide technical advice and help coordinate the city's switch to Detroit's water system.

Flint stopped getting water from that system last year to cut costs, but had trouble with water from the Flint River.

Task Force providing technical assistance on reconnecting the Flint drinking water system to a new source

CHICAGO (October 16, 2015) - Today U.S. Environmental Protection Agency Region 5 Administrator Susan Hedman established the Flint Safe Drinking Water Task Force to provide the Agency's technical expertise through regular conversations with designated officials from Michigan Department of Environmental Quality (MDEQ) and the City of Flint. The Task Force will be led by the Region 5 Deputy Regional Administrator and will assist with developing and implementing a plan to secure water quality, including measures to optimize corrosion control. Task Force members will be available to consult with MDEQ and the City of Flint on site in Flint. The Task Force will also coordinate as necessary with federal, state and local public health agencies to assist with protection of public health.

Specifically, the Task Force will provide technical assistance to the MDEQ and the City of Flint to reconnect the Flint system to a new source of drinking water (to be supplied by the Great Lakes Water Authority) and to optimize corrosion control for the Flint system, starting in October 2015. The Task Force will also provide technical assistance to the MDEQ and the City of Flint, as needed, in advance of and following connection of the Flint water system to a new source of drinking water (to be supplied by the Karegnondi Water Authority) and to optimize corrosion control for the Flint system, starting in 2016.

"EPA is committed to working with our state and local partners to ensure a safe and reliable drinking water supply for the residents of Flint, Michigan," Hedman said. "The formation of this task force continues our commitment to providing technical assistance to the City of Flint and the State of Michigan."

The Task Force will be comprised of scientists and technical experts from the EPA Region 5 office in Chicago, the National Risk Management Research Lab in Cincinnati and the EPA drinking water program. In addition, EPA will ask the Governor to designate a MDEQ official and the Mayor of Flint to designate a city official, to serve as points of contact for the Task Force.

Subject: Flint switch

I talked to Liane and Flint is close to switching back but it hasn't happened yet. The transmission line has been disinfected and they have 2 good rounds of bacti monitoring. They got a proposal from Flint's consultant on orhophospate addition which has been forwarded to Mike and Darren. DEQ was expecting a permit application for the switch to come in today from Flint.

We also talked about picking some sites to do some ongoing sampling to gauge progress of lowering lead levels. Liane will see about getting Steve Busch and Mike Pryzby together with Darren and Mike Schock on this. Things will need to happen quickly, as the switch will obviously not be delayed to do sampling.

Subject: Re: Flint switch

I told Mike I will start drafting the QAPP so he and Darren can focus on the more urgent technical issues.

Also very important - One of the likely factors that caused the very high lead release at the Citizen name / Ex. 6 ome is physical disturbances to the non-lead (galvanized iron) portion of the service line. In our Chicago study, the highest lead levels were associated with physical disturbances to the service line but the entire service lines were made of lead. In Flint, it seems the lead pipe may only be on the public side which does not appear to have been physically disturbed in the Citizen name / Ex. 6 case, but the physical disturbances to the non-lead portion of the Citizen name / Ex. 6 service line likely dislodged unstable high lead-bearing scale from inside of the non-lead portion of the service line. Even when treatment is in place and the lead portions of the service lines are removed, my concern is that physical disturbances will cause the release of this scale and sediment from within the remaining non-lead portions of the service lines. This scale and sediment will also continue to accumulate in the water heaters and consequently on the faucet aerators. Sadly, we are still finding that despite public education on not using hot water to make formula, some people continue to do so. It would make sense to recommend public education on physical disturbances and that water heaters should be flushed periodically as well to reduce the amound of lead that will be brought to the tap and trapped in the aerators.

I am assuming that Mike is going to need some service lines extracted as well to assess what is left on the pipe as that may affect how the treatment is going to work. I would recommend evaluating both the lead and non-lead portions because my fear is that removing only the lead portion of the service line may not address the risk and residents may think the problem has been solved by the removal of the lead portion of the service line. The prolonged exposure of the pipe to high chloride levels has likely rendered the existing scale to be unstable, so the 'base' on which the proposed treatment is intended to work has to be evaluated for lead and non-lead pipes as well. The scale analyses take time so we should probably start on this right away.

Subject: From Michigan Radio: State admits Flint did not follow federal rules designed to keep lead out of water

We'll send the rest of the clips around later, but wanted you to see this one right away…

http://michiganradio.org/post/state-admits-flint-did-not-follow-federal-rules-designed-keep-lead-out-water#stream/0

State admits Flint did not follow federal rules designed to keep lead out of water

Lindsey Smith • 9 hours ago

The Michigan Department of Environmental Quality says Flint did not follow federal regulations for large water systems when it switched its source for drinking water.

"It's increasingly clear there was confusion here, but it also is increasingly clear that DEQ staff believed they were using the proper federal protocol and they were not," MDEQ Director Dan Wyant said.

Internal emails show staff in the department misinterpreted the federal Lead and Copper Rule applying to larger water systems, which are required to "maintain" corrosion control.

Wyant has removed Liane Shekter Smith as head of the department's Office of Drinking Water and Municipal Assistance. She's been reassigned until a soon to be announced "independent, third party, after-action review" to detail what went wrong before Flint's water problems and why.

There has been some flip-flopping at the state level on whether Flint has in fact implemented corrosion-control treatment, but ultimately, the consensus is that there was none.

When Flint switched its source for tap water from Detroit’s system to the Flint River in April 2014, the water flowing into the city's pipes and into people's homes was no longer treated to control corrosion. Water from Detroit came pre-treated, but when the city started pumping from the river, it didn't do any kind of corrosion control. This treatment helps keep lead and other metals from corroding from old service lines and pipes in people’s homes. Such treatment is required under federal law.

The rules are written by the U.S. Environmental Protection Agency. So far, the agency hasn't given a solid answer to that question: Did Flint violate federal drinking water regulations? One EPA spokesman wrote in an Oct.1 email: “Your inquiry is relatively complex.”

But emails Virgina Tech researcher Marc Edwards obtained under the Freedom of Information Act paint a clearer picture of the federal agency’s position.*

On June 10, the EPA and Michigan’s Department of Environmental Quality had a conference call. EPA's Miguel Del Toral provided DEQ with a summary of what he found at Flint resident Lee Anne Walters' home. Multiple tests showed Walters' home had extremely high lead levels.

The meeting notes say DEQ’s district supervisor, Steve Busch, pointed out that Flint was following federal rules.

But Del Toral noted that the rules were drafted more than 20 years ago. And since then “research and different situations, like Washington D.C., have educated scientists, experts, and regulators that the existing requirements … may not be as protective as previously thought.”

On July 21, the EPA and DEQ had another conference call. Before the call, DEQ's Liane Shekter Smith wrote in an email to the EPA:

"…While we understand your concerns with the overall implementation of the lead and copper rule(s); we think it is appropriate for EPA to indicate in writing (an email would be sufficient) your concurrence that the city is in compliance with the lead and copper rule as implemented in Michigan. This would help distinguish between our goals to address important public health issues separately from the compliance requirements of the actual rule which we believe have been and continue to be met in the city of Flint."

The meeting notes from this conference call, later that afternoon, are more telling of the federal agency's position.

EPA staff note federal regulations require the state to "review and approve" any changes in corrosion-control treatment when a water system gets a new water source. The feds go on to say that they've talked to staff and attorneys at the agency's headquarters and "believes" that systems "need to 'maintain' corrosion control."

The notes say the EPA agreed to share its legal citations once a written opinion was shared. It doesn't appear that's happened yet.

Then there's a list of "next steps" in the meeting notes from July 21. Here, the state basically agrees that Flint needs to treat to control corrosion as soon as possible. Flint will not be allowed to stop corrosion-control treatment when it switches water sources in 2016. And the state agrees that it will not allow another city water system to switch water sources without corrosion-control treatment, like it allowed Flint to do.

•□□□□□□□□ MDEQ "will have discussions with Flint to request that they start corrosion-control treatment as soon as possible."

•□□□□□□□□ "MDEQ and (EPA) were in agreement that it is important to get phosphate addition (a form of corrosion-control treatment) going in Flint as soon as possible."

•□□□□□□□□ “(EPA) commented that we now have a path forward for Flint despite a difference of opinion on whether the regulations required Flint to ‘maintain’ corrosion-control treatment when they started serving treated water from the Flint River.”

•□□□□□□□□ “MDEQ and (EPA) agreed that after Flint implements corrosion-control treatment, when they switch back to Lake Huron water, they will need to continue the corrosion-control treatment while conducting monitoring to determine if this treatment is optimized with the new Lake Huron water quality.”

•□□□□□□□□ “MDEQ and Region 5 agreed that other communities currently implementing corrosion-control treatment and change sources will need to continue to provide corrosion-control treatment and conduct monitoring to determine whether the treatment is optimized with the new source water quality.”

Three weeks later, on Aug. 10, the chief of the EPA region's drinking water office, Thomas Poy, emails officials at the state. He wants to know if Flint has “been approached about starting corrosion control sooner rather than later?”

Another week goes by before the state’s DEQ sends an official letter to Flint recommending treatment.

MDEQ’s Steve Busch says Flint has “until the end of the year to make a recommendation, but they are planning to have the treatment in place by Jan. 2016.”

On Aug. 31, there’s another conference call between EPA and Michigan’s DEQ.

They talk about the work of Virginia Tech’s Marc Edwards. Edwards’ tests have shown “serious” levels of lead in city water. The EPA’s Thomas Poy says “the results give further evidence that lead levels in Flint are trending upward.”

The meeting notes state the obvious, that Edwards’ data “is putting added pressure on MDEQ and EPA to ensure that Flint addresses their lack of corrosion-control treatment in an expedited manner” to protect people from lead exposure.

“EPA acknowledged that to delay installation of corrosion control treatment in Flint would likely cause even higher levels of lead over time as Flint’s many lead service lines (about 15,000) are continuously in contact with corrosive water.”

Two days later, EPA’s Poy follows up with DEQ staff, asking if Flint had decided yet if it would implement treatment.

The next day, Sept. 3, Flint makes the decision to treat for corrosion control. It’s not expected to cost much, since the feed lines at the water treatment plant are already in place. The city just needs different sized pumps, state officials said in emails.

In the end, Flint, or the state, or both, decided the city would switch back to Detroit's water system instead.

Subject: Phone conversation with Citizen name / Ex. 6 Flint, Michigan RE: Lead service line schematics + Need for public outreach

Hi Tom, Jennifer, and Miguel,

I spoke with Citizen name / Ex. 6 (Personal Phone / Ex. 6 this morning and he asked if I knew any of the people on the new EPA task force that was announced on Friday. He wanted me to pass along his name and number to a task force member so that he could let them know about the lead service line maps that are located at the Court Street Water Department location.

Citizen name / Ex. 6 also notified me that there are still many people in the community that are not aware of the severity of the water quality issues and the availability of filters. He asked if EPA was planning any outreach that included delivery of information about the water to each home. I told him that the Task Force focus will be to provide technical assistance on drinking water treatment and that they'll be needing to take samples to characterize the water quality and determine the appropriate treatment to optimize corrosion control. I told him that I didn't know if EPA was planning to conduct public outreach.

He also reminded me that he was anxious to receive a copy of the EPA memo regarding corrosion control treatment requirements for large systems because he believes that Flint has been in violation of the LCR since switching to the Flint River water.

Best wishes,

Heather

Subject: re: results of 3rd sample from Citizen name / Ex. 6 home? --> as of your 9/8/15 email (attached), 3rd round not included

Hi Miguel and Jennifer,

Any luck finding 3rd round results from Citizen name / Ex. 6 home? I can't find anything on it in my email, but I thought the emails below might help us narrow down when we heard about it. As of Miguel's 9/8/15 timeline of sampling at Citizen name / Ex. 6 home (below), the 707 ug/L result from the 3rd round is not listed. So, we'd be looking for an email, etc. from after that date, right? I'll forward anything else I find.

Also, in case it helps with the search, according to FOIA'd emails on www.flintwaterstudy.org, the 707 ug/L sample was taken on April 2, 2015.

Sorry,

Subject: Re: Lead Testing - Media Question

Good morning all...

There appears to be some confusion as to who collected the samples. There were multiple sampling events at Citizen name / Ex. 6 home. The following is a summary of sampling conducted at the Citizen name / Ex. 6 home that I am aware of.

Sampling history at Citizen name / Ex. 6 home

At the residents' request, the City of Flint tested the drinking water at the home of Citizen name / Ex. 6

Citizen name / Ex. 6 for lead on two occasions. The lead results were 104 µg/L on February 18, 2015, and 397 µg/L on March 3, 2015.

Subsequent to the discovery of these high lead levels, the City of Flint shut off the water to the Citizen name / Ex. 6 home on April 3, 2015.

The water was briefly turned back on by Citizen name / Ex. 6 on April 27-28, 2015 to collect additional samples. The water had sat unused from April 3, 2015 to April 27, 2015.The kitchen tap was flushed for 45 minutes the night of April 27, 2015 and a series of sequential samples (total of 30) were collected on April 28, 2015 by Citizen name / Ex. 6. These samples were sent to Dr. Marc Edwards at Virginia Tech for analysis. The sample results ranged in value from 200 µg/L to 13,200 µg/L, with an average value of 2,500 µg/L.

It was found that a portion of the service line serving Citizen name / Ex. 6 home was made of lead and the City of Flint replaced Citizen name / Ex. 6 service line on May 6, 2015.

Following the replacement of the service line, a total of 18 samples were collected by Citizen name / Ex. 6 Citizen name / Ex. 6 on May 13, 2015 and sent to the U.S. EPA Chicago Regional Laboratory for analysis. The results of 15 sequential samples (one sample collected right after another) from the kitchen tap ranged from 0.51 µg/L to 3.9 µg/L, with an average of 1.5 µg/L, indicating that the replacement of the service line was successful in removing the source of lead into the Citizen name / Ex. 6 home. The bathroom tap result was 5.5 µg/L and the two sample results from the hot water heater were 31.7 µg/L and 9.74 µg/L.

Note: The water heater was sampled as it is typical to find lead-bearing deposits accumulated in the water heaters where upstream sources of lead are or were present, which is one of the reasons why EPA/CDC advises people not to use hot water for cooking or making formula.

Josh- I'm not sure who is in today who'd be to respond or if EPA would share discuss testing results for a private home with a reporter. We do have a statement from yesterday that we can share with this reporter today. The rest may have to wait until Tuesday. If so, Peter will pick it up.

Tom, Tinka, if you're working today – any advice about how to proceed? Thanks.

Below is a statement the RA approved yesterday:

EPA and the Michigan Department of Environmental Quality are working closely with the City of Flint to ensure that residents are provided with safe drinking water. MDEQ determined that although recent lead monitoring shows Flint has not exceeded the lead action level (15 ug/L), the results indicate Flint does not have optimized corrosion control. EPA and MDEQ have recommended that Flint implement corrosion control treatment as soon as possible since the city's lead service lines can leach lead into the drinking water if left untreated.

The City of Flint recently accepted EPA's offer to provide technical assistance to the City and MDEQ on the optimization of corrosion control in the city's water distribution system. The City's Technical Advisory Committee has been notified that experts from EPA's Office of Research and Development (in Cincinnati) will join the panel.

Flint residents who are concerned about lead in their drinking should contact the water utility and may request their water be sampled. Additional information about lead in drinking water is available at http://water.epa.gov/drink/contaminants/basicinformation/lead.cfm.

Subject: RE: Lead Testing - Media Question

This is regarding some testing that was done at Citizen name / Ex. 6 home in the City of Flint.
She lives at 212 Browning. She presented documentation from Miquel Del Toral that the water was tested.
The results of multiple testing showed extremely high levels of Lead in the water.
I would like to confirm that the testing was done and the preliminary report is in fact real.

Also, if there is any way someone could do an interview with us next week about this I would like to at least put that out there.

Subject: re: results of 3rd sample from Citizen name / Ex. 6 home? --> as of your 9/8/15 email (attached), 3rd round not included

Hi Miguel and Jennifer,

Any luck finding 3rd round results from the Citizen name / Ex. 6 home? I can't find anything on it in my email, but I thought the emails below might help us narrow down when we heard about it. As of Miguel's 9/8/15 timeline of sampling at the Citizen name / Ex. 6 home (below), the 707 ug/L result from the 3rd round is not listed. So, we'd be looking for an email, etc. from after that date, right? I'll forward anything else I find.

Also, in case it helps with the search, according to FOIA'd emails on www.flintwaterstudy.org, the 707 ug/L sample was taken on April 2, 2015.

Sorry,

Andrea Porter

Subject: Re: Lead Testing - Media Question

Good morning all...

There appears to be some confusion as to who collected the samples. There were multiple sampling events at the [redacted] home. The following is a summary of sampling conducted at the [redacted] home that I am aware of.

Sampling history at the [redacted] home

At the residents' request, the City of Flint tested the drinking water at the home of [redacted] for lead on two occasions. The lead results were 104 µg/L on February 18, 2015, and 397 µg/L on March 3, 2015.

Subsequent to the discovery of these high lead levels, the City of Flint shut off the water to the [redacted] home on April 3, 2015.

The water was briefly turned back on by the [redacted] on April 27-28, 2015 to collect additional samples. The water had sat unused from April 3, 2015 to April 27, 2015.The kitchen tap was flushed for 45 minutes the night of April 27, 2015 and a series of sequential samples (total of 30) were collected on April 28, 2015 by [redacted] These samples were sent to Dr. Marc Edwards at Virginia Tech for analysis. The sample results ranged in value from 200 µg/L to 13,200 µg/L, with an average value of 2,500 µg/L.

It was found that a portion of the service line serving the [redacted] home was made of lead and the City of Flint replaced the [redacted] service line on May 6, 2015.

Following the replacement of the service line, a total of 18 samples were collected by [redacted] on May 13, 2015 and sent to the U.S. EPA Chicago Regional Laboratory for analysis. The results of 15 sequential samples (one sample collected right after another) from the kitchen tap ranged from 0.51 µg/L to 3.9 µg/L, with an average of 1.5 µg/L, indicating that the replacement of the service line was successful in removing the source of lead into the [redacted] home. The bathroom tap result was 5.5 µg/L and the two sample results from the hot water heater were 31.7 µg/L and 9.74 µg/L.

Note: The water heater was sampled as it is typical to find lead-bearing deposits accumulated in the water heaters where upstream sources of lead are or were present, which is one of the reasons why EPA/CDC advises people not to use hot water for cooking or making formula.

Josh- I'm not sure who is in today who'd be to respond or if EPA would share discuss testing results for a private home with a reporter. We do have a statement from yesterday that we can share with this reporter today. The rest may have to wait until Tuesday. If so, Peter will pick it up.

Tom, Tinka, if you're working today – any advice about how to proceed? Thanks.

Below is a statement the RA approved yesterday:

EPA and the Michigan Department of Environmental Quality are working closely with the City of Flint to ensure that residents are provided with safe drinking water. MDEQ determined that although recent lead monitoring shows Flint has not exceeded the lead action level (15 ug/L), the results indicate Flint does not have optimized corrosion control. EPA and MDEQ have recommended that Flint implement corrosion control treatment as soon as possible since the city's lead service lines can leach lead into the drinking water if left untreated.

The City of Flint recently accepted EPA's offer to provide technical assistance to the City and MDEQ on the optimization of corrosion control in the city's water distribution system. The City's Technical Advisory Committee has been notified that experts from EPA's Office of Research and Development (in Cincinnati) will join the panel.

Flint residents who are concerned about lead in their drinking should contact the water utility and may request their water be sampled. Additional information about lead in drinking water is available at http://water.epa.gov/drink/contaminants/basicinformation/lead.cfm.

Subject: FW: Lead Testing - Media Question

Please see the reporter's question below.

I am not sure if we can tell media what private residences we have tested (if we have tested this residence).

Do we have any personnel in Flint who would be appropriate for the reporter to interview?

Is there a desk statement that we used to respond to the inquiry from the Flint Journal that we received yesterday that we can send to this reporter?

For now, I will tell the reporter that I will check on her question but may not be able to respond this afternoon.

Thanks.

Subject: RE: Flint WTP PH2 SEG4 - Corrosion Control

Mike,

Thank-you for giving us the opportunity to review the city of Flint's corrosion control plan.

We believe it is necessary that Flint boosts orthophosphate dosage. Given that the distribution system has not received orthophosphate in over a year, we expect that orthophosphate will need to be boosted to 1) meet the demand of the distribution system, 2) reach the service lines and other lead-containing components in premise plumbing, and 3) accelerate lead reduction at the consumer's taps. Orthophosphate should preferably be added in the same form as the Detroit source which is phosphoric acid from our understanding. This is the proposed case here, however, a simple test should be performed to make sure that the pH is not impacted in a significant way at the desired target dose.

We have not been able to obtain comprehensive water quality data for the finished water characteristics of the Detroit water that will be fed to Flint, to assess ranges of major chemical characteristic fluctuations. However, based upon the email trail, Detroit water entering the Flint system appears to only contain around 0.4 PO4/L. This concentration range is entirely too low compared to that needed in studies presented and published in the last 20+ years that have focused on lead released directly from lead pipes, and the solubility of the most likely lead orthophosphate pipes scales. We also strongly feel that targeted dose of 0.8 mg PO4/L is also too low, for the very same reason. We would be glad to share with you numerous standard

corrosion control and treatment reference works, best practices guides and published results from US and international lead corrosion control field and pilot studies. Secondly, the basis for that target (other communities using Lake Huron source use the same dose) is not scientifically derived nor does it consider water quality and the current state of Flint's distribution system. We have reviewed the original Detroit corrosion study and have seen some of the LCR monitoring data, and besides the fact that it did not directly pertain to this water source, few dosages were tested in the cited 1994 pipe loop study, and the higher dosage than the one implemented in the field currently was more effective. Based on the limited amount of data on the quality of Detroit water, what we know about the history of Detroit corrosion control, we think an orthophosphate residual of 3 to 4 mg PO4/L should be the minimum starting test target residual for pipe passivation. It is likely that, at least initially a higher dosage will be necessary to reach the far ends of the distribution system and sufficiently reduce lead solubility and release from all lead sources. To allow flexibility, we feel the design of the chemical feed and storage systems should be able to consistently deliver a maximum dose of 5 to 6 mg PO4/L, if substantial orthophosphate loss is observed, if the starting dose is set for the desired residual level of 3 to 4 mg/L as PO4. We suggest that jar tests be performed in advance of orthophosphate addition to Detroit water to evaluate the impact of orthophosphate dose on turbidity that could result from interactions between orthophosphate and background Detroit water quality parameters (e.g., aluminum, calcium, etc.).

We want to stress that immediately shifting to Detroit water and adding orthophosphate will not necessarily translate to immediate improvements. Furthermore, this is a change, albeit a return to past conditions. Nonetheless, a period of system upset should be anticipated. The need for a communication strategy and a distribution system plan are critical.

Lastly, we see no mention of a water quality monitoring program. Two programs need to be put in place immediately (before return to Detroit water) to 1) identify lead sources, 2) assess treatment effectiveness against lead release from all of the simultaneously operating mechanisms (solubility, particulate release, galvanic corrosion), and 3) assess orthophosphate levels and stability of water quality in the distribution system.

There are multiple sources of lead in the Flint distribution system to the consumers' taps, such as: pipes; leaded brass; leaded solder; accumulations on old galvanized steel pipes; possibly accumulated on copper or some plastic pipes. It is critical that the fate of orthophosphate in the distribution system is understood, and how effective it is against each type of lead source, so dosing adjustment can be properly made. For this purpose, we recommend that a number of residences throughout Flint that meet the following plumbing criteria, be identified for an assessment of the contribution lead from the different potential service line and interior plumbing sources, through detailed mapping of plumbing materials, lengths, sizes, and location and type of inline devices and faucets using profile sampling. For confidence in interpretation, probably at

least 5 sites from each of the configurations will be necessary. The configurations we would estimate to be most important (but should be changed or added to if local construction practice indicates it's necessary): Lead service line, galvanized steel interior plumbing; lead service line, copper with leaded solder joints; lead service line, plastic interior plumbing. It is also possible that interior plumbing may differ from the material used for the customer-side service line segment. We would be glad to discuss the specifics of this sampling effort.

For the purpose of assessing stability of water quality in the distribution system and to inform on orthophosphate residual adjustment, we suggest that 8 to 10 locations in the distribution system be selected to measure pH, alkalinity, orthophosphate, turbidity and iron on a weekly basis. These could be collected from TCR sampling locations, or other readily-accessible buildings, should be located at a distribution of locations in the distribution system and should be collected after a flush sufficiently long to assure that "fresh" distribution system water is being measured. Research has shown that over time, orthophosphate can reduce disinfectant demand associated with corroding metallic distribution system materials. These measurements need to be performed in the field and can simply be done with a portable HACH test kit or spectrophotometer.

A lead sampling plan needs to be in place to access the effectiveness of water change and treatment boost. LCR monitoring sites with confirmed lead service lines can be in the sampling pool. Sampling should consist of a 1 liter first draw sample (LCR sample without 5 minute pre-flush), followed by an additional flushed sample or two depending on profile sample results which is intended to capture major lead source(s). The specific details of this effort need to be worked out by the technical committee as soon as possible. We would gladly work with Flint on establishing a water sampling program to identity and verify lead service line sites. The plan and initial sampling effort should be performed before the switch so that one baseline sample set is collected.

Lastly, our strength does not fall under full-scale pump and chemical feed delivery systems. We would only say that the systems need to be scaled-up in size to accommodate our suggested dosing needs. Also, there is the some discussion about diverting water to the Dort reservoir and an associated orthophosphate feed system. We are not familiar with the reservoir but are wondering if it is an open reservoir?

Of course this is a lot of information to share and we would gladly be available to discuss the technical and scientific basis for our suggestions.

Let us know if you have any questions and thanks again,

Darren and Mike

Subject: Flint WTP PH2 SEG4 - Corrosion Control

Hi Mike,

Please see attached plans for the Corrosion Control Plan for the City of Flint. I will have the official submittal package to you tomorrow afternoon after I get Brent or Mike's signature on the permit application. I will call you when I get back in Lansing to drop the package. Is three sets of full size plans adequate? Would you like some half size plans? Let me know.

Basis of Design

Given that Flint will require lead and copper corrosion control and given that Detroit utilizes orthophosphate for their corrosion control methodology, and that Flint will be receiving Detroit water for the immediate future, orthophosphate is the appropriate corrosion control methodology for Flint. A dosage of 0.8 mg/l as PO_4 has been recommended for the Detroit water. Numerous utilities utilizing Lake Michigan water have a target dosage of 0.9 mg/l as PO_4. Therefore, a target dosage in the range of 0.8 to 0.9 mg/l appears appropriate.

It is expected that, at least initially, there will be a significant PO_4 demand in the system. This will require a significantly higher dosage until this demand is satisfied and the target residual can be maintained. We are therefore designing for capability of a maximum dosage of 1.5 mg/l.

The arriving Detroit water will likely have some residual PO_4 when it arrives at Flint. It has been reported that this residual will be approximately 0.4 mg/l. The system must therefore be capable of a minimum dosage of 0.4 mg/l.

Based upon the usage of 75% Phosphoric Acid and a flow range of 4 MGD to 25 MGD, with an average day of 16 MGD, the expected feed rate will be 1.35 to 32 gpd. Average Phosphoric Acid feed is expected to be 10.8 gpd, requiring 30 days storage of 325 gal.

Orthophosphate will need to be applied at two locations. Detroit water will enter the Flint system at Control Station CS2, and supplementary phosphate will be applied there. However, on occasion some incoming water may need to be diverted to the Dort Reservoir, bypassing CS2. This water would then be introduced to the system through High Service Pump Station PS4 and phosphate would be introduced at this location.

Please let me know if the information is adequate or you require additional information.

Thanks.

The Michigan Department of Environmental Quality says Flint did not follow federal regulations for large water systems when it switched its source for drinking water.

"It's increasingly clear there was confusion here, but it also is increasingly clear that DEQ staff believed they were using the proper federal protocol and they were not," MDEQ Director Dan Wyant said.

Internal emails show staff in the department misinterpreted the federal Lead and Copper Rule applying to larger water systems, which are required to "maintain" corrosion control.

Wyant has removed Liane Shekter Smith as head of the department's Office of Drinking Water and Municipal Assistance. She's been reassigned until a soon to be announced "independent, third party, after-action review" to detail what went wrong before Flint's water problems and why.

There has been some flip-flopping at the state level on whether Flint has in fact implemented corrosion-control treatment, but ultimately, the consensus is that there was none.

When Flint switched its source for tap water from Detroit's system to the Flint River in A pril 2014, the water flowing into the city's pipes and into people's homes was no longer treated to control corrosion. Water from Detroit came pre-treated, but when the city started pumping from the river, it didn't do any kind of corrosion control. This treatment helps keep lead and other metals from corroding from old service lines and pipes in people's homes. Such treatment is required under federal law.

The rules are written by the U.S. Environmental Protection Agency. So far, the agency hasn't given a solid answer to that question: Did Flint violate federal drinking water regulations? One EPA spokesman wrote in an Oct.1 email: “Your inquiry is relatively complex.”

But emails Virgina Tech researcher Marc Edwards obtained under the Freedom of Information Act paint a clearer picture of the federal agency’s position.*

On June 10, the EPA and Michigan’s Department of Environmental Quality had a conference call. EPA's Miguel Del Toral provided DEQ with a summary of what he found at Flint resident Lee Anne Walters' home. Multiple tests showed Walters' home had extremely high lead levels.

The meeting notes say DEQ’s district supervisor, Steve Busch, pointed out that Flint was following federal rules.

But Del Toral noted that the rules were drafted more than 20 years ago. And since then “research and different situations, like Washington D.C., have educated scientists, experts, and regulators that the existing requirements … may not be as protective as previously thought.”

On July 21, the EPA and DEQ had another conference call. Before the call, DEQ's Liane Shekter Smith wrote in an email to the EPA:

“…While we understand your concerns with the overall implementation of the lead and copper rule(s); we think it is appropriate for EPA to indicate in writing (an email would be sufficient) your concurrence that the city is in compliance with the lead and copper rule as implemented in Michigan. This would help distinguish between our goals to address important public health issues separately from the compliance requirements of the actual rule which we believe have been and continue to be met in the city of Flint.”

The meeting notes from this conference call, later that afternoon, are more telling of the federal agency’s position.

EPA staff note federal regulations require the state to “review and approve” any changes in corrosion-control treatment when a water system gets a new water source. The feds go on to say that they’ve talked to staff and attorneys at the agency’s headquarters and “believes” that systems “need to ‘maintain’ corrosion control.”

The notes say the EPA agreed to share its legal citations once a written opinion was shared. It doesn't appear that's happened yet.

Then there’s a list of “next steps” in the meeting notes from July 21. Here, the state basically agrees that Flint needs to treat to control corrosion as soon as possible. Flint will not be allowed to stop corrosion-control treatment when it switches water sources in 2016. And the state agrees that it will not allow another city water system to switch water sources without corrosion-control treatment, like it allowed Flint to do.

MDEQ “will have discussions with Flint to request that they start corrosion-control treatment as soon as possible.”

“MDEQ and (EPA) were in agreement that it is important to get phosphate addition (a form of corrosion-control treatment) going in Flint as soon as possible.”

“(EPA) commented that we now have a path forward for Flint despite a difference of opinion on whether the regulations required Flint to ‘maintain’ corrosion-control treatment when they started serving treated water from the Flint River.”

“MDEQ and (EPA) agreed that after Flint implements corrosion-control treatment, when they switch back to Lake Huron water, they will need to continue the corrosion-control treatment while conducting monitoring to determine if this treatment is optimized with the new Lake Huron water quality.”

“MDEQ and Region 5 agreed that other communities currently implementing corrosion-control treatment and change sources will need to continue to provide corrosion-control treatment and conduct monitoring to determine whether the treatment is optimized with the new source water quality.”

Three weeks later, on Aug. 10, the chief of the EPA region's drinking water office, Thomas Poy, emails officials at the state. He wants to know if Flint has “been approached about starting corrosion control sooner rather than later?”

Another week goes by before the state’s DEQ sends an official letter to Flint recommending treatment.

MDEQ’s Steve Busch says Flint has “until the end of the year to make a recommendation, but they are planning to have the treatment in place by Jan. 2016.”

On Aug. 31, there’s another conference call between EPA and Michigan’s DEQ.

They talk about the work of Virginia Tech’s Marc Edwards. Edwards’ tests have shown “serious” levels of lead in city water. The EPA’s Thomas Poy says “the results give further evidence that lead levels in Flint are trending upward.”

The meeting notes state the obvious, that Edwards’ data “is putting added pressure on MDEQ and EPA to ensure that Flint addresses their lack of corrosion-control treatment in an expedited manner” to protect people from lead exposure.

“EPA acknowledged that to delay installation of corrosion control treatment in Flint would likely cause even higher levels of lead over time as Flint’s many lead service lines (about 15,000) are continuously in contact with corrosive water.”

Two days later, EPA’s Poy follows up with DEQ staff, asking if Flint had decided yet if it would implement treatment.

The next day, Sept. 3, Flint makes the decision to treat for corrosion control. It's not expected to cost much, since the feed lines at the water treatment plant are already in place. The city just needs different sized pumps, state officials said in emails.

In the end, Flint, or the state, or both, decided the city would switch back to Detroit's water system instead.

*Marc Edwards shared his FOIA request with Michigan Radio. When contacted about the FOIA, a DEQ spokesman shared the information as well.

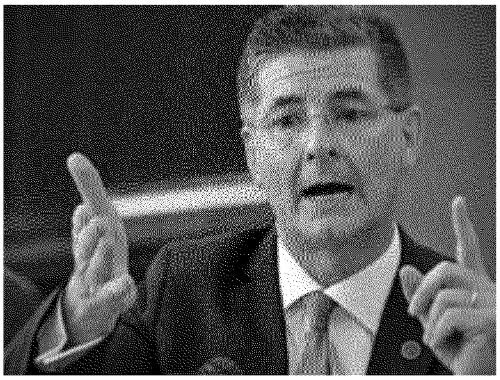
Jim Lynch, The Detroit News 12:12 a.m. EDT October 19, 2015



(Photo: Dale G. Young / The Detroit News)

Michigan's top environmental official acknowledged the state made mistakes in its handling of Flint's long-running water crisis, and said changes would be made, including reassigning a top official responsible for the safety of drinking water.

Dan Wyant, director of Michigan's Department of Environmental Quality, said late Sunday that staff members applied the wrong standards of the Lead and Copper Rule that governs testing and monitoring for drinking water. The result was that proper controls regarding corrosion were not put in place when the city began drawing its water from the Flint River in spring 2014.

"Our actions reflected inexperience, and our public response to criticism was the wrong tone early in this conversation," Wyant said. "But the best we can do with the situation going forward is represented in our present course. ... We will learn from this. We will make necessary changes to see to it that our program becomes a national leader in (lead) protection."

The changes will include the reassignment of Liane Shekter Smith, chief of DEQ's Office of Drinking Water and Municipal Assistance. Gov. Rick Snyder will also introduce an independent, third-party review of the state's handling of Flint's water issues.

Wyant's announcement comes after months of rising concerns among Flint residents over the safety of their drinking water and lead contamination. It also comes after the recent release of inter-agency communications through Freedom of Information Act requests relating to Flint's situation that demonstrate confusion behind the scenes.

State officials seemingly failed to heed repeated warnings from the Environmental Protection Agency as far back as February about potential problems with Flint's water system.

Communications released this week between the federal agency and DEQ also show how an environmental law designed to protect the public allowed the government to utilize questionable water testing practices and move slowly in addressing problems, all while remaining "in compliance" with regulations.

Critics hold the state responsible for the current situation, since Snyder's appointed emergency manager was in charge when the decision was made to begin drawing water from the Flint River in 2014 to save money. State officials have said that move was a "city decision."

Problems began then, including residents saying tap water had strange coloring, smell and taste. In the last month, those concerns were dramatically heightened by studies that show lead levels in some children have risen since the switch from Detroit's water system. Those studies showed that, in some areas, lead levels in children's blood samples have doubled and, in two ZIP codes, tripled.

Many opportunities missed

Emails and letters released by the state this week show many missed opportunities for health and environmental agencies to identify the lead problems months ago.

In February, an EPA official assessing Flint's situation raised several concerns with DEQ, particularly with the way the state conducted testing to ensure water coming into city homes was safe to drink. Such testing is required by the federal Lead and Copper Rule.

"Particulate lead release is a normal part of the corrosion process and it is universal (common) in all systems," wrote Miguel Del Toral, regulations manager for EPA's Region 5, in a Feb. 27 email to two DEQ staffers.

“It’s just that it’s not captured as often by the infrequent (Lead and Copper Rule) sampling. If systems are pre-flushing the tap the night before collecting … samples … (MDEQ still provides these instructions to public water systems) this clears particulate lead out of the plumbing and biases the results low by eliminating the highest lead values. ...

“The particulate lead is being flushed away before collecting compliance samples which provides false assurance to resident about the true lead levels in the water.”

Del Toral would repeat the same concerns in a widely publicized unofficial memo in A pril. But at each step along the way, city and officials responded to testing queries by saying their approach met federal guidelines. As recently as Sept. 3, Flint’s Public Works Director Howard Croft supported the testing methods used.

“We have performed over one hundred and sixty lead tests throughout the city since switching over to the Flint River and remain with the EPA standards,” he wrote. “It is also worth noting … there are different lead testing methods used within the industry and the city remains consistent with the most recent EPA approved testing method which can produce different results than other methods.”

Corrosion control lacking

At the same time Del Toral expressed concerns with Michigan’s testing methods, EPA officials also identified another major potential problem with Flint’s water system: corrosion control. Under the Lead and Copper Rule, Flint was required to provide “optimal corrosion control” — water additives that prevent lead from old plumbing and service lines from leaching into the drinking water.

Two February EPA emails to the DEQ released this week indicated the federal agency was perplexed by what appeared to be a lack of such controls in the Flint system. Responses from Michigan over the next several months indicate no such controls were in place. An April 24 email from one DEQ staffer stated bluntly: “Flint is currently not practicing any corrosion control treatment at the water plant.”

On Sunday, Wyant said staffers applied standards of the Lead and Copper Rule that were designed for populations below 50,000. Flint has a population of roughly 100,000, which triggers a different set of criteria and includes performing two six-month testing programs of local water to determine proper corrosion controls.

“None of the DEQ staff in this division had ever worked on a water source switch for a community of over 50,000 people,” he said. “It’s increasingly clear there was confusion here, but it also is increasingly clear that DEQ staff believed they were using the proper federal protocol and they were not.”

The emails released this week also raise questions about statements made by Wyant earlier this month at a news conference. When asked about what corrosion controls had been used since Flint began drawing its water from the river, Wyant indicated the system had been using lime.

Virginia Tech professor Marc Edwards, whose research on Flint's water had directly challenged many of the state's assertions in recent months, said lime could actually increase the corrosivity of the water interacting with lead plumbing lines. Earlier this week, Wyant addressed his statement about lime in a written response to questions.

"I was relaying what staff and consultants have indicated to me," he said. "Lime softening was used to address the hardness of the water. While this has an impact on pH, testing bore out that more needed to be done."

State, EPA officials disagree

State environmental officials and their EPA counterparts apparently disagreed over the corrosion control issue for much of this year. Once Del Toral's concerns were raised in February, a DEQ official explained why the state had not accounted for corrosion.

Documents released this week include notes from a July meeting between the parties where the state highlighted its reasoning: "MDEQ explained that they did not treat the switch to Flint River water as a 'new system,' but as a new source. It is their understanding that two rounds of six-month testing is still needed to characterize the water quality. They don't know what optimized is until those two rounds of six-month monitoring are completed."

Emails from this spring show MDEQ officials eventually recognized the need for additional corrosion control measures, yet little progress was made on the issue — right up until Friday's announcement that Flint had switched back to getting its water from the Detroit Water and Sewerage Department.

That type of pacing is completely permissible under the Lead and Copper Rule. Busch, of the DEQ, described the schedule laid out by the federal law.

"They now have to complete a study (within 18 months) and are then allowed a period of additional time (2 additional years) to install the selected treatment for fully optimized corrosion control," Busch wrote in July. "We are planning to suggest the city directly submit a treatment process to shorten the time-line to achieve full optimization. This letter is currently being drafted but won't be ready to mail out for another week."

http://www.mlive.com/news/flint/index.ssf/2015/10/top_state_water_official_repla.html

By: Ron Fonger, October 19

FLINT, MI -- State Department of Environmental Quality Director Dan Wyant is replacing his top municipal drinking water official after acknowledging oversight mistakes with the Flint water system in a news release today, Oct. 19.

Wyant issued a written statement today, saying the state enforced the wrong federal standards for treating Flint River water for more than 17 months, failing to require that the city make it less corrosive.

Researchers and doctors have said the river water, used here since April 2014, was far more corrosive that Lake Huron water that had been purchased for decades from the Detroit Water system.

As the more corrosive water contacted lead and lead solder in Flint's distribution system, more lead leached into tap water here, reasearchers have said, and the blood lead levels in children and infants in some parts of the city tripled after the change.

On Friday, Oct. 16, the city switched back to Detroit-supplied water, using millions of dollars from the state and Charles Stewart Mott Foundation to make the change.

In his statement, Wyant attributed the "mistake" by the DEQ in Flint to "our drinking water program staff."

DEQ Chief Deputy Jim Sygo will immediately assume the role of interim chief of the department's Office of Drinking Water and Municipal Assistance, the statement says, replacing Liane Shekter Smith.

Shekter Smith has been reassigned, DEQ spokesman Brad Wurfel confirmed.

"It recently has become clear that our drinking water program staff made a mistake while working with the city of Flint," Wyant said in a statement. "Simply stated, staff employed a federal protocol they believed was appropriate, and it was not. The water testing steps followed would have been correct for a city less than 50,000 people, but not for a city of nearly 100,000."

"As details of the situation emerge, I am convinced our program staff believed they were doing their job right. As the state recognized there could be a health threat to Flint residents, we took appropriate steps. We are now embarked on an unprecedented effort to safeguard Flint residents and families with near-term, intermediate and long-term actions to protect and educate city residents."

Sygo has been with the DEQ since becoming a water quality specialist in the Saginaw District in 1983. He previously served as interim director of the department.

By: Ron Fonger, October 18

FLINT, MI -- The city's crisis with lead in drinking water is dominating the mayoral election conversation in Flint, and this isn't happy talk.

Both incumbent Mayor Dayne Walling and challenger Karen Weaver agreed that water is the No. 1 issue with voters -- there is no close second.

In less than three weeks, they will find out how that concern and anger translate when voters head to the ballot box on Election Day.

Flint remains in the midst of a public health emergency following spikes in lead levels in tap water and in the blood of infants and children since the decision to change the city's water source from Lake Huron to the Flint River in April 2014.

"The first thing (people) say to me is, 'What are we going to do about the water?' Nine out of 10 times, it's water" voters are talking about, Weaver said. "I believe it's going to continue to be an issue until Nov. 3."

Walling said the water crisis has become the single biggest issue on voters' minds and said he's dealing with it by addressing it head on.

Just weeks ago, state and Flint officials ended their defense of the shift to river water, agreeing to spend an additional $12 million in state and city funding to reconnect the city to Lake Huron water through the Detroit Water and Sewerage Department.

First elected in 2009, Walling has been the city's top elected official since Flint was still buying its drinking water from the Detroit system and still governing itself without state oversight. Walling was re-elected to his second term on the day the state recommended that the governor appoint an emergency financial manager to take over the city in 2011.

The city's previous water arrangement had been in place for decades, but it changed after Gov. Rick Snyder declared the financial emergency in Flint and appointed a series of emergency managers to run the city.

Direct state control of the city ended just five months ago, but Walling is still blamed by some residents for decisions made by emergency managers and how he reacted to them.

Walling said he's never worked harder to fix a problem than he has on Flint water, but he's also trying to tell voters that the decision to use the Flint River as a water source wasn't his.

"I do ask the voters to look carefully at my record and others who have influenced this situation, including the four emergency managers and the state and federal government," he said.

"I raised my concerns internally. At the point that the city was moving forward (with using the river) I did," said Walling. He said the decision was made by former emergency manager Ed Kurtz.

In March 2013, the mayor said, he and members of City Council were given financial projections for joining the Karegnondi Water Authority, which is building a new pipeline that will serve the region with water from Lake Huron. At the time they received those projections, the plan was that the city would continue to buy Lake Huron water from the Detroit water system until the new pipeline construction was finished.

After Detroit canceled its contract with Flint because the city joined KWA, Walling said Kurtz changed the plan without consulting him. The former emergency manager signed an order in June 2013 with an engineering firm to help prepare the city's water treatment plant for processing river water.

The Flint Journal could not reach Kurtz for comment.

Although the mayor said he raised objections behind closed doors, he supported the decision in public, joining former emergency manager Darnell Earley in a celebratory toast of Flint River water and pushing the button at the city water plant that turned off the lake water supply from the Detroit system.

Walling's decision not to speak out against the switch in water sources is a common criticism from Weaver, who said the incumbent's position only changed when city and state officials acknowledged rising lead levels in city water.

"We were being told by Walling the water is OK ... We were told everything was fine for over a year and a half..." Weaver said. "A huge issue underlying all that is the trust has been broken and damaged. He did not speak up and speak out."

For his part, Walling has said Weaver "doesn't understand the full issue and doesn't know what it will take to truly fix the problem."

Inside Michigan Politics Associate Editor Bill Ballenger said there's no doubt water is the issue on voters' minds heading into the final weeks of the mayoral campaign.

"It has just about blotted out the sun," Ballenger said of the attention drinking water has received. "I could easily see Walling losing on this issue."

Ballenger said he's not certain Weaver is in a position to capitalize on it.

"She's almost invisible (and) this is like a gift from heaven," Ballenger said of the challenger, who is making her first run at public office. "It's almost like Walling is running against himself."

Weaver finished second to Walling in the primary election, earning the right to face the incumbent Nov. 3, but her campaign was left with less than $200 in the bank, according to her most recent campaign finance report.

In that August primary, Walling collected 3,530 votes, Weaver 2,364 votes, city Councilman Eric Mays won 1,194 votes and Councilman Wantwaz Davis finished with 763 votes.

Flint's drinking water was an issue in that election -- but not the issue it has become since rising lead levels have become public.

At Freeman Elementary School, testing in recent weeks showed lead levels that were six times higher than the federal threshold.

Four of Flint resident Keith Pemberton's grandchildren are students there.

"I hold (almost) everybody on the City Council, the mayor, the emergency manager, the governor, the (state) Department of Environmental Quality) and the (U.S. Environmental Protection Agency)" responsible for what's happened, said Pemberton. "I hold them all responsible."

Pemberton, a senior citizen from the city's south side, has become politically active because of the water issues.

"If I would have harmed people the way that they did, they would call me a domestic terrorist," he said. "This is the issue that matters to me."

This story has been updated to include a correction of Bill Ballenger's title. He is associate editor of Inside Michigan Politics.

What used to be considered an irrational fear of contaminated drinking water has become a reality in Flint Schools.

Water samples recently taken from three Flint schools had lead levels in excess of federal government standards. The findings have reverberated throughout the state, serving as a wakeup call for Blue Water Area schools.

“Obviously, the health of our children is the No. 1 priority,” Algonac Community Schools superintendent John Strycker said. “Therefore, district officials will meet to discuss a plan of action in handling this situation. What happened in Flint has opened our eyes to possible infrastructure issues here and around the state.”

The concerns at Algonac, along with other Blue Water Area districts is that, even though the waterways of the St. Clair River and Lake Huron might be more pristine than the Flint River, that’s no guarantee of lead-free connections in buildings with older plumbing.

According to best practice guidelines from the Environmental Protection Agency, even if the water meets federal and state standards at the municipal water supply, water pipes and plumbing fixtures can affect the quality of water. School officials and child care providers need to know whether students, teachers and staff consume elevated levels of lead when drinking water in their facility.

Lead in drinking water is primarily from materials and components associated with service lines and facility plumbing. While municipal water suppliers are responsible for providing high quality drinking water, they can't control the materials contained in the plumbing components of older facilities, according to the EPA.

School buildings that were built before the mid-1980s could have lead connections in their plumbing, and testing within school buildings is not something done evenly across the state.

Algonac has three buildings — Pointe Tremble Early Childhood Center, Algonquin

Elementary School and Algonac Jr./Sr. High School — that were built before 1980.

Steve Demick, St. Clair County Health Department environmental health director, said older plumbing is associated with higher risk of lead or other contaminants.

“If in doubt, it is always recommended to test,” Demick said in an email. “The situation in Flint has developed because of many unique circumstances. The water from the Flint River contains more organics which requires more chlorine to treat. The additional chlorine creates more corrosive water that reduces a natural bio-film that separated the water from any lead in the distribution system. Switching back to the less corrosive Detroit water supply will allow for that beneficial bio-film layer to be re-established.”

A handful of local districts are taking precautionary measures in response to concerns over water quality related to the age of buildings versus the water source.

Marysville Public Schools is currently working with Testing Engineers & Consultants, Inc. located in Troy to do an analysis of its oldest building, Washington Elementary School.

Superintendent Shawn Wightman said even though the district gets its water from the city’s water treatment plant, which conducts rigorous water quality tests, there hasn’t been testing within the schools.

“As far as testing in our schools, I am looking into having this done. I don’t want anyone to be exposed to the types of contaminates found in Flint’s schools,” Wightman said in an email.

Marysville is also considering testing a building a year and incorporating that within its asbestos inspections as a cost-saving measure.

In Port Huron, in which all of the buildings pre-date the mid-1980s, the district is not required to test at the building level but could do that at its own expense.

Spokesman Keely Baribeau said the city has a lead and copper test done every three years in which 30 high- risk places in the city are checked, and none has ever been near the 15 micro gram per liter worry mark.

She added that the district’s water source is near the mouth of the St. Clair River, where the water is not nearly as corrosive as the Flint River.

“Flint's situation has led us to take proactive efforts and confirm the safety of our water. It is safe and we are confident in its safety. We will be testing and monitoring the water on an ongoing basis,” Baribeau said.

Districts such as Capac and Yale in St. Clair County operate on wells. While local municipalities regularly test the wells, Capac school buildings have not been tested.

Superintendent Stephen Bigelow said Capac is in the process of obtaining kits from the county health department to test its buildings. The school district's water comes from five wells.

Yale Public Schools superintendent Ken Nicholl said schools that operate on wells are required to regularly test for many items on a scheduled basis. Among these tests include lead, arsenic, heavy metals, nitrates, nitrites as well as bacteria. Schools that receive their water from a municipality do not have to test as the responsibility falls upon the municipality which have very stringent water quality thresholds as well, according to the district. Yale uses two well water facilities at the south end of its district and city water on its main campus.

At East China School District, East China Township tests the water at different school sites on a weekly basis, according to the school district.

Memphis Community Schools has contacted the county health department to test for lead at its buildings on an eight-year cycle. The district has had tests done on the school system in 2001 and 2008 at the completion of bond construction projects.

The district uses city water, which already conducts bi-monthly testing for arsenic, lead, bacteria, and other substances. All tests have been in compliance with appropriate levels, Nancy Thomson, co-superintendent and elementary principal at Memphis Community Schools said.

“We use city water, so we rely on them to do required testing for safe drinking water. Our test would only confirm that their safe drinking water going through the school pipes is still coming out in a safe drinking form,” Thomson said.

http://www.washingtontimes.com/news/2015/oct/19/michigan-official-federal-water-rules-not-followed/

By - Associated Press - Monday, October 19, 2015

FLINT, Mich. (AP) - Federal rules governing drinking water weren’t followed properly in Flint, where problems with lead prompted officials to declare a public health emergency, the head of the Michigan Department of Environmental Quality said.

DEQ Director Dan Wyant on Sunday acknowledged mistakes by the state and said “necessary changes” are being made. Officials long maintained that the water met safety standards, but the state recently corroborated findings of elevated lead levels in children and disclosed higher lead amounts in three Flint schools.

“Our actions reflected inexperience, and our public response to criticism was the wrong tone early in this conversation,” Wyant said. “But the best we can do with the situation going forward is represented in our present course. We will learn from this.”

A state official responsible for the safety of drinking water has been reassigned as officials await the outcome of an independent review of the state’s role in Flint’s water problems, The Detroit News and Michigan Radio reported. In a statement issued Monday morning, Wyant said he appointed an interim chief of the department’s Office of Drinking Water and Municipal A ssistance.

Flint reconnected to Detroit’s water system Friday in hopes of resolving the health emergency spurred by a switch to river water that was aimed at saving money but left children with elevated lead levels. Last week, Gov. Rick Snyder approved millions toward the $12 million that returning to Detroit’s system will cost through June.

“We are now embarked on an unprecedented effort to safeguard Flint residents and families with near-term, intermediate and long-term actions to protect and educate city residents,” Wyant said in Monday’s statement.

Flint, a city of about 99,000 people, stopped getting its water from Detroit’s system last year in a cost-cutting move. The Flint River was supposed to be an interim source until the city can join a new system getting water from Lake Huron that’s scheduled to be completed next year.

The Flint River is more corrosive than Detroit’s water from Lake Huron and, because proper controls were not implemented, the river water picked up lead from aging pipes that connect water mains to houses and businesses. If consumed, lead can cause developmental delays and learning disabilities.

On Sunday, Wyant said staffers applied standards of the federal Lead and Copper Rule that were designed to govern testing and monitoring for communities with populations below 50,000 residents. Flint’s larger population triggers a different set of criteria to determine proper corrosion controls.

“None of the DEQ staff in this division had ever worked on a water source switch for a community of over 50,000 people,” he said Sunday. “It’s increasingly clear there was confusion here, but it also is increasingly clear that DEQ staff believed they were using the proper federal protocol and they were not.”

The Michigan Department of Environmental Quality says Flint did not follow federal regulations for large water systems when it switched its source for drinking water.

"It's increasingly clear there was confusion here, but it also is increasingly clear that DEQ staff believed they were using the proper federal protocol and they were not," MDEQ Director Dan Wyant said.

Internal emails show staff in the department misinterpreted the federal Lead and Copper Rule applying to larger water systems, which are required to "maintain" corrosion control.

Wyant has removed Liane Shekter Smith as head of the department's Office of Drinking Water and Municipal Assistance. She's been reassigned until a soon to be announced "independent, third party, after-action review" to detail what went wrong before Flint's water problems and why.

There has been some flip-flopping at the state level on whether Flint has in fact implemented corrosion-control treatment, but ultimately, the consensus is that there was none.

When Flint switched its source for tap water from Detroit's system to the Flint River in A pril 2014, the water flowing into the city's pipes and into people's homes was no longer treated to control corrosion. Water from Detroit came pre-treated, but when the city started pumping from the river, it didn't do any kind of corrosion control. This treatment helps keep lead and other metals from corroding from old service lines and pipes in people's homes. Such treatment is required under federal law.

The rules are written by the U.S. Environmental Protection Agency. So far, the agency hasn't given a solid answer to that question: Did Flint violate federal drinking water regulations? One EPA spokesman wrote in an Oct.1 email: “Your inquiry is relatively complex.”

But emails Virgina Tech researcher Marc Edwards obtained under the Freedom of Information Act paint a clearer picture of the federal agency's position.*

On June 10, the EPA and Michigan's Department of Environmental Quality had a conference call. EPA's Miguel Del Toral provided DEQ with a summary of what he found at Flint resident Lee Anne Walters' home. Multiple tests showed Walters' home had extremely high lead levels.

The meeting notes say DEQ's district supervisor, Steve Busch, pointed out that Flint was following federal rules.

But Del Toral noted that the rules were drafted more than 20 years ago. And since then “research and different situations, like Washington D.C., have educated scientists, experts, and regulators that the existing requirements … may not be as protective as previously thought.”

On July 21, the EPA and DEQ had another conference call. Before the call, DEQ's Liane Shekter Smith wrote in an email to the EPA:

“…While we understand your concerns with the overall implementation of the lead and copper rule(s); we think it is appropriate for EPA to indicate in writing (an email would be sufficient) your concurrence that the city is in compliance with the lead and copper rule as implemented in Michigan. This would help distinguish between our goals to address important public health issues separately from the compliance requirements of the actual rule which we believe have been and continue to be met in the city of Flint.”

The meeting notes from this conference call, later that afternoon, are more telling of the federal agency's position.

EPA staff note federal regulations require the state to “review and approve” any changes in corrosion-control treatment when a water system gets a new water source. The feds go on to say that they've talked to staff and attorneys at the agency's headquarters and “believes” that systems “need to ‘maintain’ corrosion control.”

The notes say the EPA agreed to share its legal citations once a written opinion was shared. It doesn't appear that's happened yet.

Then there's a list of "next steps" in the meeting notes from July 21. Here, the state basically agrees that Flint needs to treat to control corrosion as soon as possible. Flint will not be allowed to stop corrosion-control treatment when it switches water sources in 2016. And the state agrees that it will not allow another city water system to switch water sources without corrosion-control treatment, like it allowed Flint to do.

MDEQ "will have discussions with Flint to request that they start corrosion-control treatment as soon as possible."

"MDEQ and (EPA) were in agreement that it is important to get phosphate addition (a form of corrosion-control treatment) going in Flint as soon as possible."

"(EPA) commented that we now have a path forward for Flint despite a difference of opinion on whether the regulations required Flint to 'maintain' corrosion-control treatment when they started serving treated water from the Flint River."

"MDEQ and (EPA) agreed that after Flint implements corrosion-control treatment, when they switch back to Lake Huron water, they will need to continue the corrosion-control treatment while conducting monitoring to determine if this treatment is optimized with the new Lake Huron water quality."

"MDEQ and Region 5 agreed that other communities currently implementing corrosion-control treatment and change sources will need to continue to provide corrosion-control treatment and conduct monitoring to determine whether the treatment is optimized with the new source water quality."

Three weeks later, on Aug. 10, the chief of the EPA region's drinking water office, Thomas Poy, emails officials at the state. He wants to know if Flint has "been approached about starting corrosion control sooner rather than later?"

Another week goes by before the state's DEQ sends an official letter to Flint recommending treatment.

MDEQ's Steve Busch says Flint has "until the end of the year to make a recommendation, but they are planning to have the treatment in place by Jan. 2016."

On Aug. 31, there's another conference call between EPA and Michigan's DEQ.

They talk about the work of Virginia Tech's Marc Edwards. Edwards' tests have shown "serious" levels of lead in city water. The EPA's Thomas Poy says "the results give further evidence that lead levels in Flint are trending upward."

The meeting notes state the obvious, that Edwards' data "is putting added pressure on MDEQ and EPA to ensure that Flint addresses their lack of corrosion-control treatment in an expedited manner" to protect people from lead exposure.

"EPA acknowledged that to delay installation of corrosion control treatment in Flint would likely cause even higher levels of lead over time as Flint's many lead service lines (about 15,000) are continuously in contact with corrosive water."

Two days later, EPA's Poy follows up with DEQ staff, asking if Flint had decided yet if it would implement treatment.

The next day, Sept. 3, Flint makes the decision to treat for corrosion control. It's not expected to cost much, since the feed lines at the water treatment plant are already in place. The city just needs different sized pumps, state officials said in emails.

In the end, Flint, or the state, or both, decided the city would switch back to Detroit's water system instead.

*Marc Edwards shared his FOIA request with Michigan Radio. When contacted about the FOIA, a DEQ spokesman shared the information as well.

(Photo: Dale G. Young / The Detroit News)

Michigan's top environmental official acknowledged the state made mistakes in its handling of Flint's long-running water crisis, and said changes would be made, including reassigning a top official responsible for the safety of drinking water.

Dan Wyant, director of Michigan's Department of Environmental Quality, said late Sunday that staff members applied the wrong standards of the Lead and Copper Rule that governs testing and monitoring for drinking water. The result was that proper controls regarding corrosion were not put in place when the city began drawing its water from the Flint River in spring 2014.

"Our actions reflected inexperience, and our public response to criticism was the wrong tone early in this conversation," Wyant said. "But the best we can do with the situation going forward is represented in our present course. ... We will learn from this. We will make necessary changes to see to it that our program becomes a national leader in (lead) protection."

The changes will include the reassignment of Liane Shekter Smith, chief of DEQ's Office of Drinking Water and Municipal Assistance. Gov. Rick Snyder will also introduce an independent, third-party review of the state's handling of Flint's water issues.

Wyant's announcement comes after months of rising concerns among Flint residents over the safety of their drinking water and lead contamination. It also comes after the recent release of inter-agency communications through Freedom of Information Act requests relating to Flint's situation that demonstrate confusion behind the scenes.

State officials seemingly failed to heed repeated warnings from the Environmental Protection Agency as far back as February about potential problems with Flint's water system.

Communications released this week between the federal agency and DEQ also show how an environmental law designed to protect the public allowed the government to utilize questionable water testing practices and move slowly in addressing problems, all while remaining "in compliance" with regulations.

Critics hold the state responsible for the current situation, since Snyder's appointed emergency manager was in charge when the decision was made to begin drawing water from the Flint River in 2014 to save money. State officials have said that move was a "city decision."

Problems began then, including residents saying tap water had strange coloring, smell and taste. In the last month, those concerns were dramatically heightened by studies that show lead levels in some children have risen since the switch from Detroit's water system. Those studies showed that, in some areas, lead levels in children's blood samples have doubled and, in two ZIP codes, tripled.

Many opportunities missed

Emails and letters released by the state this week show many missed opportunities for health and environmental agencies to identify the lead problems months ago.

In February, an EPA official assessing Flint's situation raised several concerns with DEQ, particularly with the way the state conducted testing to ensure water coming into city homes was safe to drink. Such testing is required by the federal Lead and Copper Rule.

"Particulate lead release is a normal part of the corrosion process and it is universal (common) in all systems," wrote Miguel Del Toral, regulations manager for EPA's Region 5, in a Feb. 27 email to two DEQ staffers.

"It's just that it's not captured as often by the infrequent (Lead and Copper Rule) sampling. If systems are pre-flushing the tap the night before collecting … samples … (MDEQ still provides these instructions to public water systems) this clears particulate lead out of the plumbing and biases the results low by eliminating the highest lead values. ...

"The particulate lead is being flushed away before collecting compliance samples which provides false assurance to resident about the true lead levels in the water."

Del Toral would repeat the same concerns in a widely publicized unofficial memo in A pril. But at each step along the way, city and officials responded to testing queries by saying their approach met federal guidelines. As recently as Sept. 3, Flint's Public Works Director Howard Croft supported the testing methods used.

"We have performed over one hundred and sixty lead tests throughout the city since switching over to the Flint River and remain with the EPA standards," he wrote. "It is also worth noting … there are different lead testing methods used within the industry and the city remains consistent with the most recent EPA approved testing method which can produce different results than other methods."

Corrosion control lacking

At the same time Del Toral expressed concerns with Michigan's testing methods, EPA officials also identified another major potential problem with Flint's water system: corrosion control. Under the Lead and Copper Rule, Flint was required to provide "optimal corrosion control" — water additives that prevent lead from old plumbing and service lines from leaching into the drinking water.

Two February EPA emails to the DEQ released this week indicated the federal agency was perplexed by what appeared to be a lack of such controls in the Flint system. Responses from Michigan over the next several months indicate no such controls were in place. An April 24 email from one DEQ staffer stated bluntly: "Flint is currently not practicing any corrosion control treatment at the water plant."

On Sunday, Wyant said staffers applied standards of the Lead and Copper Rule that were designed for populations below 50,000. Flint has a population of roughly 100,000, which triggers a different set of criteria and includes performing two six-month testing programs of local water to determine proper corrosion controls.

“None of the DEQ staff in this division had ever worked on a water source switch for a community of over 50,000 people,” he said. “It’s increasingly clear there was confusion here, but it also is increasingly clear that DEQ staff believed they were using the proper federal protocol and they were not.”

The emails released this week also raise questions about statements made by Wyant earlier this month at a news conference. When asked about what corrosion controls had been used since Flint began drawing its water from the river, Wyant indicated the system had been using lime.

Virginia Tech professor Marc Edwards, whose research on Flint’s water had directly challenged many of the state’s assertions in recent months, said lime could actually increase the corrosivity of the water interacting with lead plumbing lines. Earlier this week, Wyant addressed his statement about lime in a written response to questions.

“I was relaying what staff and consultants have indicated to me,” he said. “Lime softening was used to address the hardness of the water. While this has an impact on pH, testing bore out that more needed to be done.”

State, EPA officials disagree

State environmental officials and their EPA counterparts apparently disagreed over the corrosion control issue for much of this year. Once Del Toral’s concerns were raised in February, a DEQ official explained why the state had not accounted for corrosion.

Documents released this week include notes from a July meeting between the parties where the state highlighted its reasoning: “MDEQ explained that they did not treat the switch to Flint River water as a ‘new system,’ but as a new source. It is their understanding that two rounds of six-month testing is still needed to characterize the water quality. They don’t know what optimized is until those two rounds of six-month monitoring are completed.”

Emails from this spring show MDEQ officials eventually recognized the need for additional corrosion control measures, yet little progress was made on the issue — right up until Friday’s announcement that Flint had switched back to getting its water from the Detroit Water and Sewerage Department.

That type of pacing is completely permissible under the Lead and Copper Rule. Busch, of the DEQ, described the schedule laid out by the federal law.

“They now have to complete a study (within 18 months) and are then allowed a period of additional time (2 additional years) to install the selected treatment for fully optimized corrosion control,” Busch wrote in July. “We are planning to suggest the city directly submit a treatment process to shorten the time-line to achieve full optimization. This letter is currently being drafted but won't be ready to mail out for another week."

http://www.mlive.com/news/flint/index.ssf/2015/10/top_state_water_official_repla.html

By: Ron Fonger, October 19

FLINT, MI -- State Department of Environmental Quality Director Dan Wyant is replacing his top municipal drinking water official after acknowledging oversight mistakes with the Flint water system in a news release today, Oct. 19.

Wyant issued a written statement today, saying the state enforced the wrong federal standards for treating Flint River water for more than 17 months, failing to require that the city make it less corrosive.

Researchers and doctors have said the river water, used here since April 2014, was far more corrosive that Lake Huron water that had been purchased for decades from the Detroit Water system.

As the more corrosive water contacted lead and lead solder in Flint's distribution system, more lead leached into tap water here, reasearchers have said, and the blood lead levels in children and infants in some parts of the city tripled after the change.

On Friday, Oct. 16, the city switched back to Detroit-supplied water, using millions of dollars from the state and Charles Stewart Mott Foundation to make the change.

In his statement, Wyant attributed the "mistake" by the DEQ in Flint to "our drinking water program staff."

DEQ Chief Deputy Jim Sygo will immediately assume the role of interim chief of the department's Office of Drinking Water and Municipal Assistance, the statement says, replacing Liane Shekter Smith.

Shekter Smith has been reassigned, DEQ spokesman Brad Wurfel confirmed.

"It recently has become clear that our drinking water program staff made a mistake while working with the city of Flint," Wyant said in a statement. "Simply stated, staff employed a federal protocol they believed was appropriate, and it was not. The water testing steps followed would have been correct for a city less than 50,000 people, but not for a city of nearly 100,000."

"As details of the situation emerge, I am convinced our program staff believed they were doing their job right. As the state recognized there could be a health threat to Flint residents, we took appropriate steps. We are now embarked on an unprecedented effort to safeguard Flint residents and families with near-term, intermediate and long-term actions to protect and educate city residents."

Sygo has been with the DEQ since becoming a water quality specialist in the Saginaw District in 1983. He previously served as interim director of the department.

http://www.mlive.com/news/flint/index.ssf/2015/10/will_water.html

By: Ron Fonger, October 18

FLINT, MI -- The city's crisis with lead in drinking water is dominating the mayoral election conversation in Flint, and this isn't happy talk.

Both incumbent Mayor Dayne Walling and challenger Karen Weaver agreed that water is the No. 1 issue with voters -- there is no close second.

In less than three weeks, they will find out how that concern and anger translate when voters head to the ballot box on Election Day.

Flint remains in the midst of a public health emergency following spikes in lead levels in tap water and in the blood of infants and children since the decision to change the city's water source from Lake Huron to the Flint River in April 2014.

"The first thing (people) say to me is, 'What are we going to do about the water?' Nine out of 10 times, it's water" voters are talking about, Weaver said. "I believe it's going to continue to be an issue until Nov. 3."

Walling said the water crisis has become the single biggest issue on voters' minds and said he's dealing with it by addressing it head on.

Just weeks ago, state and Flint officials ended their defense of the shift to river water, agreeing to spend an additional $12 million in state and city funding to reconnect the city to Lake Huron water through the Detroit Water and Sewerage Department.

First elected in 2009, Walling has been the city's top elected official since Flint was still buying its drinking water from the Detroit system and still governing itself without state oversight. Walling was re-elected to his second term on the day the state recommended that the governor appoint an emergency financial manager to take over the city in 2011.

The city's previous water arrangement had been in place for decades, but it changed after Gov. Rick Snyder declared the financial emergency in Flint and appointed a series of emergency managers to run the city.

Direct state control of the city ended just five months ago, but Walling is still blamed by some residents for decisions made by emergency managers and how he reacted to them.

Walling said he's never worked harder to fix a problem than he has on Flint water, but he's also trying to tell voters that the decision to use the Flint River as a water source wasn't his.

"I do ask the voters to look carefully at my record and others who have influenced this situation, including the four emergency managers and the state and federal government," he said.

"I raised my concerns internally. At the point that the city was moving forward (with using the river) I did," said Walling. He said the decision was made by former emergency manager Ed Kurtz.

In March 2013, the mayor said, he and members of City Council were given financial projections for joining the Karegnondi Water Authority, which is building a new pipeline that will serve the region with water from Lake Huron. At the time they received those projections, the plan was that the city would continue to buy Lake Huron water from the Detroit water system until the new pipeline construction was finished.

After Detroit canceled its contract with Flint because the city joined KWA, Walling said Kurtz changed the plan without consulting him. The former emergency manager signed an order in June 2013 with an engineering firm to help prepare the city's water treatment plant for processing river water.

The Flint Journal could not reach Kurtz for comment.

Although the mayor said he raised objections behind closed doors, he supported the decision in public, joining former emergency manager Darnell Earley in a celebratory toast of Flint River water and pushing the button at the city water plant that turned off the lake water supply from the Detroit system.

Walling's decision not to speak out against the switch in water sources is a common criticism from Weaver, who said the incumbent's position only changed when city and state officials acknowledged rising lead levels in city water.

"We were being told by Walling the water is OK ... We were told everything was fine for over a year and a half..." Weaver said. "A huge issue underlying all that is the trust has been broken and damaged. He did not speak up and speak out."

For his part, Walling has said Weaver "doesn't understand the full issue and doesn't know what it will take to truly fix the problem."

Inside Michigan Politics Associate Editor Bill Ballenger said there's no doubt water is the issue on voters' minds heading into the final weeks of the mayoral campaign.

"It has just about blotted out the sun," Ballenger said of the attention drinking water has received. "I could easily see Walling losing on this issue."

Ballenger said he's not certain Weaver is in a position to capitalize on it.

"She's almost invisible (and) this is like a gift from heaven," Ballenger said of the challenger, who is making her first run at public office. "It's almost like Walling is running against himself."

Weaver finished second to Walling in the primary election, earning the right to face the incumbent Nov. 3, but her campaign was left with less than $200 in the bank, according to her most recent campaign finance report.

In that August primary, Walling collected 3,530 votes, Weaver 2,364 votes, city Councilman Eric Mays won 1,194 votes and Councilman Wantwaz Davis finished with 763 votes.

Flint's drinking water was an issue in that election -- but not the issue it has become since rising lead levels have become public.

At Freeman Elementary School, testing in recent weeks showed lead levels that were six times higher than the federal threshold.

Four of Flint resident Keith Pemberton's grandchildren are students there.

"I hold (almost) everybody on the City Council, the mayor, the emergency manager, the governor, the (state) Department of Environmental Quality) and the (U.S. Environmental Protection Agency)" responsible for what's happened, said Pemberton. "I hold them all responsible."

Pemberton, a senior citizen from the city's south side, has become politically active because of the water issues.

"If I would have harmed people the way that they did, they would call me a domestic terrorist," he said. "This is the issue that matters to me."

This story has been updated to include a correction of Bill Ballenger's title. He is associate editor of Inside Michigan Politics.

What used to be considered an irrational fear of contaminated drinking water has become a reality in Flint Schools.

Water samples recently taken from three Flint schools had lead levels in excess of federal government standards. The findings have reverberated throughout the state, serving as a wakeup call for Blue Water Area schools.

“Obviously, the health of our children is the No. 1 priority,” Algonac Community Schools superintendent John Strycker said. “Therefore, district officials will meet to discuss a plan of action in handling this situation. What happened in Flint has opened our eyes to possible infrastructure issues here and around the state.”

The concerns at Algonac, along with other Blue Water Area districts is that, even though the waterways of the St. Clair River and Lake Huron might be more pristine than the Flint River, that’s no guarantee of lead-free connections in buildings with older plumbing.

According to best practice guidelines from the Environmental Protection Agency, even if the water meets federal and state standards at the municipal water supply, water pipes and plumbing fixtures can affect the quality of water. School officials and child care providers need to know whether students, teachers and staff consume elevated levels of lead when drinking water in their facility.

Lead in drinking water is primarily from materials and components associated with service lines and facility plumbing. While municipal water suppliers are responsible for providing high quality drinking water, they can't control the materials contained in the plumbing components of older facilities, according to the EPA.

School buildings that were built before the mid-1980s could have lead connections in their plumbing, and testing within school buildings is not something done evenly across the state.

Algonac has three buildings — Pointe Tremble Early Childhood Center, Algonquin Elementary School and Algonac Jr./Sr. High School — that were built before 1980.

Steve Demick, St. Clair County Health Department environmental health director, said older plumbing is associated with higher risk of lead or other contaminants.

“If in doubt, it is always recommended to test,” Demick said in an email. “The situation in Flint has developed because of many unique circumstances. The water from the Flint River contains more organics which requires more chlorine to treat. The additional chlorine creates more corrosive water that reduces a natural bio-film that separated the water from any lead in the distribution system. Switching back to the less corrosive Detroit water supply will allow for that beneficial bio-film layer to be re-established.”

A handful of local districts are taking precautionary measures in response to concerns over water quality related to the age of buildings versus the water source.

Marysville Public Schools is currently working with Testing Engineers & Consultants, Inc. located in Troy to do an analysis of its oldest building, Washington Elementary School.

Superintendent Shawn Wightman said even though the district gets its water from the city’s water treatment plant, which conducts rigorous water quality tests, there hasn’t been testing within the schools.

“As far as testing in our schools, I am looking into having this done. I don’t want anyone to be exposed to the types of contaminates found in Flint’s schools,” Wightman said in an email.

Marysville is also considering testing a building a year and incorporating that within its asbestos inspections as a cost-saving measure.

In Port Huron, in which all of the buildings pre-date the mid-1980s, the district is not required to test at the building level but could do that at its own expense.

Spokesman Keely Baribeau said the city has a lead and copper test done every three years in which 30 high- risk places in the city are checked, and none has ever been near the 15 micro gram per liter worry mark.

She added that the district's water source is near the mouth of the St. Clair River, where the water is not nearly as corrosive as the Flint River.

"Flint's situation has led us to take proactive efforts and confirm the safety of our water. It is safe and we are confident in its safety. We will be testing and monitoring the water on an ongoing basis," Baribeau said.

Districts such as Capac and Yale in St. Clair County operate on wells. While local municipalities regularly test the wells, Capac school buildings have not been tested. Superintendent Stephen Bigelow said Capac is in the process of obtaining kits from the county health department to test its buildings. The school district's water comes from five wells.

Yale Public Schools superintendent Ken Nicholl said schools that operate on wells are required to regularly test for many items on a scheduled basis. Among these tests include lead, arsenic, heavy metals, nitrates, nitrites as well as bacteria. Schools that receive their water from a municipality do not have to test as the responsibility falls upon the municipality which have very stringent water quality thresholds as well, according to the district. Yale uses two well water facilities at the south end of its district and city water on its main campus.

At East China School District, East China Township tests the water at different school sites on a weekly basis, according to the school district.

Memphis Community Schools has contacted the county health department to test for lead at its buildings on an eight-year cycle. The district has had tests done on the school system in 2001 and 2008 at the completion of bond construction projects.

The district uses city water, which already conducts bi-monthly testing for arsenic, lead, bacteria, and other substances. All tests have been in compliance with appropriate levels, Nancy Thomson, co-superintendent and elementary principal at Memphis Community Schools said.

"We use city water, so we rely on them to do required testing for safe drinking water. Our test would only confirm that their safe drinking water going through the school pipes is still coming out in a safe drinking form," Thomson said.

http://www.washingtontimes.com/news/2015/oct/19/michigan-official-federal-water-rules-not-followed/

By - Associated Press - Monday, October 19, 2015

FLINT, Mich. (AP) - Federal rules governing drinking water weren't followed properly in Flint, where problems with lead prompted officials to declare a public health emergency, the head of the Michigan Department of Environmental Quality said.

DEQ Director Dan Wyant on Sunday acknowledged mistakes by the state and said "necessary changes" are being made. Officials long maintained that the water met safety standards, but the state recently corroborated findings of elevated lead levels in children and disclosed higher lead amounts in three Flint schools.

"Our actions reflected inexperience, and our public response to criticism was the wrong tone early in this conversation," Wyant said. "But the best we can do with the situation going forward is represented in our present course. We will learn from this."

A state official responsible for the safety of drinking water has been reassigned as officials await the outcome of an independent review of the state's role in Flint's water problems, The Detroit News and Michigan Radio reported. In a statement issued Monday morning, Wyant said he appointed an interim chief of the department's Office of Drinking Water and Municipal A ssistance.

Flint reconnected to Detroit's water system Friday in hopes of resolving the health emergency spurred by a switch to river water that was aimed at saving money but left children with elevated lead levels. Last week, Gov. Rick Snyder approved millions toward the $12 million that returning to Detroit's system will cost through June.

"We are now embarked on an unprecedented effort to safeguard Flint residents and families with near-term, intermediate and long-term actions to protect and educate city residents," Wyant said in Monday's statement.

Flint, a city of about 99,000 people, stopped getting its water from Detroit's system last year in a cost-cutting move. The Flint River was supposed to be an interim source until the city can join a new system getting water from Lake Huron that's scheduled to be completed next year.

The Flint River is more corrosive than Detroit's water from Lake Huron and, because proper controls were not implemented, the river water picked up lead from aging pipes that connect water mains to houses and businesses. If consumed, lead can cause developmental delays and learning disabilities.

On Sunday, Wyant said staffers applied standards of the federal Lead and Copper Rule that were designed to govern testing and monitoring for communities with populations below 50,000 residents. Flint's larger population triggers a different set of criteria to determine proper corrosion controls.

"None of the DEQ staff in this division had ever worked on a water source switch for a community of over 50,000 people," he said Sunday. "It's increasingly clear there was confusion here, but it also is increasingly clear that DEQ staff believed they were using the proper federal protocol and they were not."

Task group members,

Mike and I got this MDEQ request late last Friday with a very short deadline of this morning. We worked on it over the weekend, put together the attached response and after running very quickly by our management and Jeff Kempic, sent it back. Wanted to make sure everyone saw it. It would have been preferable that more time was provided and we could all have provided comment. Sorry, but we can discuss at our first meeting.

Darren

> Mike,
>
> Thank-you for giving us the opportunity to review the city of Flint's corrosion control plan.
>
> We believe it is necessary that Flint boosts orthophosphate dosage. Given that the distribution system has not received orthophosphate in over a year, we expect that orthophosphate will need to be boosted to 1) meet the demand of the distribution system, 2) reach the service lines and other lead-containing components in premise plumbing, and 3) accelerate lead reduction at the consumer's taps. Orthophosphate should preferably be added in the same form as the Detroit source which is phosphoric acid from our understanding. This is the proposed case here, however, a simple test should be performed to make sure that the pH is not impacted in a significant way at the desired target dose.

We have not been able to obtain comprehensive water quality data for the finished water characteristics of the Detroit water that will be fed to Flint, to assess ranges of major chemical characteristic fluctuations. However, based upon the email trail, Detroit water entering the Flint system appears to only contain around 0.4 PO4/L. This concentration range is entirely too low compared to that needed in studies presented and published in the last 20+ years that have focused on lead released directly from lead pipes, and the solubility of the most likely lead orthophosphate pipes scales. We also strongly feel that targeted dose of 0.8 mg PO4/L is also too low, for the very same reason. We would be glad to share with you numerous standard corrosion control and treatment reference works, best practices guides and published results from US and international lead corrosion control field and pilot studies. Secondly, the basis for that target (other communities using Lake Huron source use the same dose) is not scientifically derived nor does it consider water quality and the current state of Flint's distribution system. We have reviewed the original Detroit corrosion study and have seen some of the LCR monitoring data, and besides the fact that it did not directly pertain to this water source, few dosages were tested in the cited 1994 pipe loop study, and the higher dosage than the one implemented in the field currently was more effective. Based on the limited amount of data on the quality of Detroit water, what we know about the history of Detroit corrosion control, we think an orthophosphate residual of 3 to 4 mg PO4/L should be the minimum starting test target residual for pipe passivation. It is likely that, at least initially a higher dosage will be necessary to reach the far ends of the distribution system and sufficiently reduce lead solubility and release from all lead sources. To allow flexibility, we feel the design of the chemical feed and storage systems should be able to consistently deliver a maximum dose of 5 to 6 mg PO4/L, if substantial orthophosphate loss is observed, if the starting dose is set for the desired residual level of 3 to 4 mg/L as PO4. We suggest that jar tests be performed in advance of orthophosphate addition to Detroit water to evaluate the impact of orthophosphate dose on turbidity that could result from interactions between orthophosphate and background Detroit water quality parameters (e.g., aluminum, calcium, etc.).

We want to stress that immediately shifting to Detroit water and adding orthophosphate will not necessarily translate to immediate improvements. Furthermore, this is a change, albeit a return to past conditions. Nonetheless, a period of system upset should be anticipated. The need for a communication strategy and a distribution system plan are critical.

Lastly, we see no mention of a water quality monitoring program. Two programs need to be put in place immediately (before return to Detroit water) to 1) identify lead sources, 2) assess treatment effectiveness against lead release from all of the simultaneously operating mechanisms (solubility, particulate release, galvanic corrosion), and 3) assess orthophosphate levels and stability of water quality in the distribution system.

There are multiple sources of lead in the Flint distribution system to the consumers' taps, such as: pipes; leaded brass; leaded solder; accumulations on old galvanized steel pipes; possibly accumulated on copper or some plastic pipes. It is critical that the fate of orthophosphate in the distribution system is understood, and how effective it is against each type of lead source, so dosing adjustment can be properly made. For this purpose, we recommend that a number of residences throughout Flint that meet the following plumbing criteria, be identified for an assessment of the contribution lead from the different potential service line and interior plumbing sources, through detailed mapping of plumbing materials, lengths, sizes, and location and type of inline devices and faucets using profile sampling. For confidence in interpretation, probably at least 5 sites from each of the configurations will be necessary. The configurations we would estimate to be most important (but should be changed or added to if local construction practice indicates it's necessary): Lead service line, galvanized steel interior plumbing; lead service line, copper with leaded solder joints; lead service line, plastic interior plumbing. It is also possible that interior plumbing may differ from the material used for the customer-side service line segment. We would be glad to discuss the specifics of this sampling effort.

For the purpose of assessing stability of water quality in the distribution system and to inform on orthophosphate residual adjustment, we suggest that 8 to 10 locations in the distribution system be selected to measure pH, alkalinity, orthophosphate, turbidity and iron on a weekly basis. These could be collected from TCR sampling locations, or other readily-accessible buildings, should be located at a distribution of locations in the distribution system and should be collected after a flush sufficiently long to assure that "fresh" distribution system water is being measured. Research has shown that over time, orthophosphate can reduce disinfectant demand associated with corroding metallic distribution system materials. These measurements need to be performed in the field and can simply be done with a portable HACH test kit or spectrophotometer.

A lead sampling plan needs to be in place to access the effectiveness of water change and treatment boost. LCR monitoring sites with confirmed lead service lines can be in the sampling pool. Sampling should consist of a 1 liter first draw sample (LCR sample without 5 minute pre-flush), followed by an additional flushed sample or two depending on profile sample results which is intended to capture major lead source(s). The specific details of this effort need to be worked out by the technical committee as soon as possible. We would gladly work with Flint on establishing a water sampling program to identity and verify lead service line sites. The plan and initial sampling effort should be performed before the switch so that one baseline sample set is collected.

Lastly, our strength does not fall under full-scale pump and chemical feed delivery systems.

We would only say that the systems need to be scaled-up in size to accommodate our suggested dosing needs. Also, there is the some discussion about diverting water to the Dort reservoir and an associated orthophosphate feed system. We are not familiar with the reservoir but are wondering if it is an open reservoir?

Of course this is a lot of information to share and we would gladly be available to discuss the technical and scientific basis for our suggestions.

Let us know if you have any questions and thanks again,

Darren and Mike

Subject: Flint WTP PH2 SEG4 - Corrosion Control

Hi Mike,

Please see attached plans for the Corrosion Control Plan for the City of Flint. I will have the official submittal package to you tomorrow afternoon after I get Brent or Mike's signature on the permit application. I will call you when I get back in Lansing to drop the package. Is three sets of full size plans adequate? Would you like some half size plans? Let me know.

Basis of Design

Given that Flint will require lead and copper corrosion control and given that Detroit utilizes orthophosphate for their corrosion control methodology, and that Flint will be receiving Detroit water for the immediate future, orthophosphate is the appropriate corrosion control methodology for Flint. A dosage of 0.8 mg/l as PO_4 has been recommended for the Detroit water. Numerous utilities utilizing Lake Michigan water have a target dosage of 0.9 mg/l as PO_4. Therefore, a target dosage in the range of 0.8 to 0.9 mg/l appears appropriate.

It is expected that, at least initially, there will be a significant PO_4 demand in the system. This will require a significantly higher dosage until this demand is satisfied and the target residual can be maintained. We are therefore designing for capability of a maximum dosage of 1.5 mg/l.

The arriving Detroit water will likely have some residual PO_4 when it arrives at Flint. It has been reported that this residual will be approximately 0.4 mg/l. The system must therefore be capable of a minimum dosage of 0.4 mg/l.

Based upon the usage of 75% Phosphoric Acid and a flow range of 4 MGD to 25 MGD, with an average day of 16 MGD, the expected feed rate will be 1.35 to 32 gpd. Average Phosphoric Acid feed is expected to be 10.8 gpd, requiring 30 days storage of 325 gal.

Orthophosphate will need to be applied at two locations. Detroit water will enter the Flint system at Control Station CS2, and supplementary phosphate will be applied there. However, on occasion some incoming water may need to be diverted to the Dort Reservoir, bypassing CS2. This water would then be introduced to the system through High Service Pump Station PS4 and phosphate would be introduced at this location.

Please let me know if the information is adequate or you require additional information.

Thanks.

Subject: Flint Safe Drinking Water Task Force

FLINT SAFE DRINKING WATER TASK FORCE

US EPA is committed to working with our state and local partners to ensure a safe and reliable water supply for the residents of Flint, Michigan. To achieve this, the EPA Region 5 Administrator will establish a Task Force to provide the Agency's technical expertise through regular, but no less than weekly, conversations with designated officials* from MDEQ and the City of Flint to assist with developing and implementing a plan to secure water quality, including measures to optimize corrosion control. Task Force members will be available to consult with MDEQ and the City of Flint on site in Flint as needed. The Task Force will also coordinate as necessary with federal, state and local public health agencies to assist with protection of public health.

Specifically, the Task Force will provide technical assistance to the MDEQ and the City of Flint to reconnect the Flint system to a new source of drinking water (to be supplied by the Great Lakes Water Authority) and to optimize corrosion control for the Flint system, starting in October 2015. The Task Force will also provide technical assistance to the MDEQ and the City of Flint, as needed, in advance of and following connection of the Flint water system to a new source of drinking water (to be supplied by the Karegnondi Water Authority) and to optimize corrosion control for the Flint system, starting in 2016.

Composition of the Task Force

Region 5 Deputy Administrator Bob Kaplan, Chair

Office of Research and Development Scientist Darren Lytle

Office of Research and Development Scientist Michael Schock

Office of Water Lead and Copper Rule Technical Lead Jeff Kempic

Region 5 Water Division Deputy Director Tim Henry

Region 5 Water Division Drinking Water Section Chief Tom Poy

---

* The Governor will be asked to designate the MDEQ official; The Mayor will be asked to designate the Flint official.

Task group members,

Mike and I got this MDEQ request late last Friday with a very short deadline of this morning. We worked on it over the weekend, put together the attached response and after running very quickly by our management and Jeff Kempic, sent it back. Wanted to make sure everyone saw it. It would have been preferable that more time was provided and we could all have provided comment. Sorry, but we can discuss at our first meeting.

Darren

Subject: RE: Flint WTP PH2 SEG4 - Corrosion Control

Mike,

Thank-you for giving us the opportunity to review the city of Flint's corrosion control plan.

We believe it is necessary that Flint boosts orthophosphate dosage. Given that the distribution system has not received orthophosphate in over a year, we expect that orthophosphate will need to be boosted to 1) meet the demand of the distribution system, 2) reach the service lines and other lead-containing components in premise plumbing, and 3) accelerate lead reduction at the consumer's taps. Orthophosphate should preferably be added in the same form as the Detroit source which is phosphoric acid from our understanding. This is the proposed case here, however, a simple test should be performed to make sure that the pH is not impacted in a significant way at the desired target dose.

We have not been able to obtain comprehensive water quality data for the finished water characteristics of the Detroit water that will be fed to Flint, to assess ranges of major chemical characteristic fluctuations. However, based upon the email trail, Detroit water entering the Flint system appears to only contain around 0.4 PO4/L. This concentration range is entirely too low compared to that needed in studies presented and published in the last 20+ years that have focused on lead released directly from lead pipes, and the solubility of the most likely lead orthophosphate pipes scales. We also strongly feel that targeted dose of 0.8 mg PO4/L is also too low, for the very same reason. We would be glad to share with you numerous standard corrosion control and treatment reference works, best practices guides and published results from US and international lead corrosion control field and pilot studies. Secondly, the basis for that target (other communities using Lake Huron source use the same dose) is not scientifically derived nor does it consider water quality and the current state of Flint's distribution system. We have reviewed the original Detroit corrosion study and have seen some of the LCR monitoring data, and besides the fact that it did not directly pertain to this water source, few dosages were tested in the cited 1994 pipe loop study, and the higher dosage than the one implemented in the field currently was more effective. Based on the limited amount of data on the quality of Detroit water, what we know about the history of Detroit corrosion control, we think an orthophosphate residual of 3 to 4 mg PO4/L should be the minimum starting test target residual for pipe passivation. It is likely that, at least initially a higher dosage will be necessary to reach the far ends of the distribution system and sufficiently reduce lead solubility and release from all lead sources. To allow flexibility, we feel the design of the chemical feed and storage systems should be able to consistently deliver a maximum dose of 5 to 6 mg PO4/L, if substantial orthophosphate loss is observed, if the starting dose is set for the desired residual level of 3 to 4 mg/L as PO4. We suggest that jar tests be performed in advance of orthophosphate addition to Detroit water to evaluate the impact of orthophosphate dose on turbidity that could result from interactions between orthophosphate and background Detroit water quality parameters (e.g., aluminum, calcium, etc.).

We want to stress that immediately shifting to Detroit water and adding orthophosphate will not necessarily translate to immediate improvements. Furthermore, this is a change, albeit a return to past conditions. Nonetheless, a period of system upset should be anticipated. The need for a communication strategy and a distribution system plan are critical.

Lastly, we see no mention of a water quality monitoring program. Two programs need to be put in place immediately (before return to Detroit water) to 1) identify lead sources, 2) assess treatment effectiveness against lead release from all of the simultaneously operating mechanisms (solubility, particulate release, galvanic corrosion), and 3) assess orthophosphate levels and stability of water quality in the distribution system.

There are multiple sources of lead in the Flint distribution system to the consumers' taps, such as: pipes; leaded brass; leaded solder; accumulations on old galvanized steel pipes; possibly accumulated on copper or some plastic pipes. It is critical that the fate of orthophosphate in the distribution system is understood, and how effective it is against each type of lead source, so dosing adjustment can be properly made. For this purpose, we recommend that a number of residences throughout Flint that meet the following plumbing criteria, be identified for an assessment of the contribution lead from the different potential service line and interior plumbing sources, through detailed mapping of plumbing materials, lengths, sizes, and location and type of inline devices and faucets using profile sampling. For confidence in interpretation, probably at least 5 sites from each of the configurations will be necessary. The configurations we would estimate to be most important (but should be changed or added to if local construction practice indicates it's necessary): Lead service line, galvanized steel interior plumbing; lead service line, copper with leaded solder joints; lead service line, plastic interior plumbing. It is also possible that interior plumbing may differ from the material used for the customer-side service line segment. We would be glad to discuss the specifics of this sampling effort.

For the purpose of assessing stability of water quality in the distribution system and to inform on orthophosphate residual adjustment, we suggest that 8 to 10 locations in the distribution system be selected to measure pH, alkalinity, orthophosphate, turbidity and iron on a weekly basis. These could be collected from TCR sampling locations, or other readily-accessible buildings, should be located at a distribution of locations in the distribution system and should be collected after a flush sufficiently long to assure that “fresh” distribution system water is being measured. Research has shown that over time, orthophosphate can reduce disinfectant demand associated with corroding metallic distribution system materials. These measurements need to be performed in the field and can simply be done with a portable HACH test kit or spectrophotometer.

A lead sampling plan needs to be in place to access the effectiveness of water change and treatment boost. LCR monitoring sites with confirmed lead service lines can be in the sampling pool. Sampling should consist of a 1 liter first draw sample (LCR sample without 5 minute pre-flush), followed by an additional flushed sample or two depending on profile sample results which is intended to capture major lead source(s). The specific details of this effort need to be worked out by the technical committee as soon as possible. We would gladly work with Flint on establishing a water sampling program to identity and verify lead service line sites. The plan and initial sampling effort should be performed before the switch so that one baseline sample set is collected.

Lastly, our strength does not fall under full-scale pump and chemical feed delivery systems. We would only say that the systems need to be scaled-up in size to accommodate our suggested dosing needs. Also, there is the some discussion about diverting water to the Dort reservoir and an associated orthophosphate feed system. We are not familiar with the reservoir but are wondering if it is an open reservoir?

Of course this is a lot of information to share and we would gladly be available to discuss the technical and scientific basis for our suggestions.

Let us know if you have any questions and thanks again,

Darren and Mike

Hi Mike,

Please see attached plans for the Corrosion Control Plan for the City of Flint. I will have the official submittal package to you tomorrow afternoon after I get Brent or Mike's signature on the permit application. I will call you when I get back in Lansing to drop the package. Is three sets of full size plans adequate? Would you like some half size plans? Let me know.

Basis of Design

Given that Flint will require lead and copper corrosion control and given that Detroit utilizes orthophosphate for their corrosion control methodology, and that Flint will be receiving Detroit water for the immediate future, orthophosphate is the appropriate corrosion control methodology for Flint. A dosage of 0.8 mg/l as PO_4 has been recommended for the Detroit water. Numerous utilities utilizing Lake Michigan water have a target dosage of 0.9 mg/l as PO_4. Therefore, a target dosage in the range of 0.8 to 0.9 mg/l appears appropriate.

It is expected that, at least initially, there will be a significant PO_4 demand in the system. This will require a significantly higher dosage until this demand is satisfied and the target residual can be maintained. We are therefore designing for capability of a maximum dosage of 1.5 mg/l.

The arriving Detroit water will likely have some residual PO_4 when it arrives at Flint. It has been reported that this residual will be approximately 0.4 mg/l. The system must therefore be capable of a minimum dosage of 0.4 mg/l.

Based upon the usage of 75% Phosphoric Acid and a flow range of 4 MGD to 25 MGD, with an average day of 16 MGD, the expected feed rate will be 1.35 to 32 gpd. Average Phosphoric Acid feed is expected to be 10.8 gpd, requiring 30 days storage of 325 gal.

Orthophosphate will need to be applied at two locations. Detroit water will enter the Flint system at Control Station CS2, and supplementary phosphate will be applied there. However, on occasion some incoming water may need to be diverted to the Dort Reservoir, bypassing CS2. This water would then be introduced to the system through High Service Pump Station PS4 and phosphate would be introduced at this location.

Please let me know if the information is adequate or you require additional information.

Thanks.

Snyder defends environmental director on Flint crisis

Chad Livengood and Jim Lynch, The Detroit News 4:40 p.m. EDT October 19, 2015

Detroit — Gov. Rick Snyder on Monday defended his environmental department director's handling of the Flint water crisis, but said he's asked for a report on how the agency didn't detect lead-leaching corrosion in the city's aging pipelines.

Dan Wyant, director of Michigan's Department of Environmental Quality, said late Sunday that staff members applied the wrong standards of the federal Lead and Copper Rule that governs testing and monitoring for drinking water.

The result was that proper controls regarding corrosion were not put in place when the city began drawing its water from the Flint River in the spring of 2014, Wyant said.

"The staff made a mistake in terms of some of the classifications that really put a different set of criteria on it — and that was a mistake," Snyder said Monday in an interview with The Detroit News Editorial Board. "So we're taking remedial action to address that."

Wyant is reassigning Liane Shekter Smith, chief of DEQ's Office of Drinking Water and Municipal Assistance, to another position with the state's environmental agency. Smith will be replaced by Jim Sygo, chief deputy in DEQ's Office of Drinking Water and

Municipal Assistance.

Snyder was asked why Wyant still has a job after elevated levels of lead were found in the blood of Flint children, which caused the state to help pay for switching Flint last week back to Detroit's water system.

"I think (Wyant) took some action with respect to his staff," he said. "But as a practical matter, the people that are first being addressed are the people that had a knowledge and expertise to understand those issues. But we're still looking at all of that."

"But Dan Wyant's done a great job in responding to all of that. So I appreciate all of Dan's hard work."

Snyder said he has asked for an "after action report" on the decision-making that went into Flint switching from Detroit water temporarily to the Flint River until a new regional water pipeline could be built. Flint started getting water again from the Detroit Water and Sewerage Department on Friday.

"We'll look at all of those questions," the Republican governor said.

Wyant's actions come after months of rising concerns among Flint residents over the safety of their drinking water. They followed the recent release of inter-agency communications through Freedom of Information Act requests about Flint's situation that demonstrate confusion behind the scenes.

State officials seemingly failed to heed repeated warnings from the U.S. Environmental Protection Agency as far back as February about potential problems with Flint's water system.

Communications released this week between the federal agency and DEQ also show

how an environmental law designed to protect the public allowed the government to use questionable water testing practices and move slowly in addressing problems, all while remaining “in compliance” with regulations.

Senate Minority Leader Jim Ananich, D-Flint, said he has read some of the records that have been unearthed and he found the response of several DEQ employees “troubling.”

“It appears … folks were more concerned about protecting their jobs than they were about protecting folks in my community,” Ananich told The Detroit News on Monday.

Ananich has called on the Republican-controlled Legislature to launch its own investigation into the DEQ’s role in the Flint water crisis.
